KATA PENGANTAR

Publikasi Statistik Pengeluaran Wisatawan Mancanegara 2022 adalah publikasi tahunan yang diterbitkan Badan Pusat Statistik (BPS) dan merupakan kelanjutan dari tahun sebelumnya. Data yang disajikan dalam publikasi ini merupakan hasil pendataan *Passenger Exit Survey* (PES) 2022 yang mencatat profil wisatawan mancanegara yang berkunjung ke Indonesia mencakup profil demografi, pola perjalanan, dan pola pengeluaran wisatawan mancanegara.

PES 2022 dilaksanakan di pintu keberangkatan internasional bandar udara/pelabuhan/pos lintas batas di tiga belas provinsi di Indonesia. Adapun metode pendataan yang dilakukan dalam survei ini adalah *Computer Assisted Personal Interviewing* (CAPI).

Publikasi ini terwujud berkat kerja sama dan partisipasi dari berbagai pihak. Terima kasih dan penghargaan kami sampaikan kepada semua pihak yang telah melaksanakan tugasnya dengan baik. Kami berharap publikasi ini dapat memberikan manfaat kepada para pengguna.

Saran konstruktif dari para pengguna data sangat diharapkan untuk penyempurnaan publikasi mendatang. Semoga publikasi ini bermanfaat.

PREFACE

Publication of The International Visitors Expenditure Statistics 2022 is an annual publication published by the BPS-Statistics Indonesia. The data presented in this publication is the result of data collection from the Passenger Exit Survey (PES) 2022 which records the profile of international visitors visiting Indonesia including demographic profiles, travel patterns and spending patterns of international visitors.

PES 2022 was held at international airports/seaports/cross-border posts in thirteen provinces in Indonesia. The enumeration methods used in this survey were Computer Assisted Personal Interviewing (CAPI).

This publication's release has been made possible due to the contribution and participation of various parties. We express our gratitude and appreciation to all parties who helped realize this publication. We hope that this publication will provide benefits to users.

Constructive suggestions from data users are highly expected for the improvement of future publications.

RINGKASAN EKSEKUTIF

WISATAWAN MANCANEGARA PADA MASA PEMULIHAN COVID-19

Pariwisata Indonesia menjadi sektor yang terkena pukulan berat akibat pandemi Covid-19, khususnya aktivitas wisatawan mancanegara. Pembatasan mobilitas dan perjalanan luar negeri sebagai upaya pengendalian penyebaran virus tak ayal menyebabkan jumlah wisatawan mancanegara merosot tajam. Sejumlah kerugian dirasakan, mulai dari hilangnya devisa pariwisata hingga kontribusi terhadap perekonomian yang kian menurun. Seiring meluasnya vaksinasi dan kasus yang melandai di berbagai negara, kebijakan relaksasi pun diberlakukan. Tahun 2022 menjadi fase awal pemulihan dari pandemi Covid-19 dan kebijakan di Indonesia terindikasi telah mampu mengembalikan aktivitas wisatawan mancanegara secara bertahap.

Wisatawan mancanegara yang datang ke Indonesia tahun 2022 memiliki karakteristik tertentu, baik dari sisi kebangsaan, jenis kelamin, umur, dan pekerjaan. Wisatawan mancanegara saat Covid-19 tahun 2021 didominasi oleh bangsa Asia. Akan tetapi, pada masa pemulihan di 2022, kedatangan wisatawan bangsa lainnya mulai menunjukkan peningkatan, seperti Eropa, Amerika, Oseania, Timur Tengah, dan Afrika. Berdasarkan jenis kelamin, wisatawan perempuan cenderung lebih sedikit dibandingkan wisatawan laki-laki, terutama bangsa Timur Tengah. Adapun berdasarkan umur, mayoritas wisatawan mancanegara Indonesia berusia muda antara 25-34 tahun. Wisatawan mancanegara sebagian besar bekerja sebagai profesional dan manajer.

Wisatawan mancanegara memiliki preferensi tertentu saat datang ke Indonesia. Pada tahun 2022, sebagian besar wisatawan mancanegara datang ke Indonesia untuk berlibur, terutama bangsa Eropa. Bali masih menjadi tujuan favorit wisatawan saat berkunjung ke Indonesia. DKI Jakarta dan Kepulauan Riau merupakan provinsi lain yang menjadi pilihan sebagian besar wisatawan mancanegara. Satu orang wisatawan mancanegara rata-rata tinggal di Indonesia selama 14 sampai 15 malam. Hotel bintang merupakan akomodasi yang paling diminati wisatawan mancanegara selama tinggal di indonesia.

Membaiknya situasi Covid-19 mendorong perubahan pola pengeluaran wisatawan mancanegara. Biaya berwisata ke Indonesia tahun 2022 telah berkurang 53,25 persen dibandingkan tahun 2021. Di tahun 2022, seorang wisatawan mancanegara rata-rata mengeluarkan biaya sebesar USD 1.448,01 setiap berkunjung ke Indonesia, sedangkan di tahun

https://www.bps.go.id

2021 seorang wisatawan harus mengeluarkan sebesar USD 3.097,41. Kondisi ini terindikasi disebabkan oleh rata-rata lama tinggal wisatawan mancanegara yang lebih singkat di tahun 2022. Selain itu, kebijakan pemulihan Covid-19 yang menghapus biaya-biaya terkait kesehatan, seperti biaya karantina, berbagai tes Covid-19, dan asuransi, turut menurunkan biaya yang harus dikeluarkan wisatawan mancanegara. Hal ini juga terlihat dari berkurangnya komposisi pengeluaran kesehatan wisatawan mancanegara di tahun 2022. Di sisi lain, wisatawan mancanegara di tahun 2022 paling banyak mengeluarkan biaya untuk keperluan akomodasi, makan minum, dan belanja. Menurut kebangsaannya, wisatawan mancanegara Austria memiliki rata-rata pengeluaran terbesar dibandingkan bangsa lainnya. Sementara itu, wisatawan bangsa Malaysia memiliki rata-rata pengeluaran terkecil saat berkunjung ke Indonesia.

Wisatawan mancanegara dengan karakteristik tertentu menentukan kecenderungan dalam pengeluaran. Analisis regresi logistik biner dilakukakan terhadap data *Passenger Exit Survey* 2022 untuk mengetahui determinan pengeluaran wisatawan mancanegara. Hasil menunjukkan bahwa pengeluaran wisatawan mancanegara ditentukan oleh umur, jenis kelamin, kebangsaan, pekerjaan, maksud kunjungan utama, jenis akomodasi utama yang digunakan, dan lama kunjungan. Wisatawan mancanegara yang berpeluang lebih besar untuk memiliki pengeluaran tinggi selama berkunjung ke Indonesia adalah mereka yang: 1) berusia tua (55 tahun ke atas); 2) berjenis kelamin perempuan; 3) bukan bangsa ASEAN; 4) bekerja sebagai manajer bisnis/ eksekutif; profesional, atau berstatus sebagai pelajar; 5) berkunjung ke Indonesia untuk tujuan yang bersifat pribadi; 6) menginap di hotel baik bintang maupun nonbintang; serta 7) tinggal paling lama 12 malam di Indonesia dalam satu kali kunjungan.

EXECUTIVE SUMMARY

INTERNATIONAL VISITORS DURING THE COVID-19 RECOVERY PERIOD

Indonesian tourism is a sector that has been hit hard by the Covid-19 pandemic, especially the activities of international visitors. Restrictions on mobility and foreign travel as an effort to control the spread of the virus certainly caused the number of international visitors to drop sharply. A number of losses have been perceived, ranging from the loss of tourism foreign exchange to the declining contribution of tourism to the economy. As vaccinations spread and cases slumped in various countries, relaxation policies were enacted. Year 2022 was the initial phase of recovery from the Covid-19 pandemic and policies in Indonesia are indicated to gradually revive international visitor activities.

International visitors of Indonesia in 2022 have certain characteristics, both in nationality, gender, age, and occupation. International visitors during Covid-19 in 2021 were dominated by the Asian. However, during the recovery period in 2022, visitor arrivals from other nations were seem to be increased, such as Europe, America, Oceania, the Middle East and Africa. Based on gender, female visitors tend to be fewer than male visitors, especially those from the Middle East. As for age, the majority of international visitors were young between 25-34 years old. Most international visitors worked as professionals and managers.

International visitors had certain preferences when they come to Indonesia. In 2022, most international visitors came to Indonesia for vacation, especially Europeans. Bali was still a favorite destination for visitors when visiting Indonesia. DKI Jakarta and the Riau Islands are other provinces that were also preferred by most international visitors. One international visitor on average stayed in Indonesia for 14 to 15 nights. Star hotels were most in demand by international visitors while living in Indonesia.

The improvement in the Covid-19 situation has prompted changes in the spending pattern of international visitors. The cost of traveling to Indonesia in 2022 has decreased by 53.25 percent compared to 2021. In 2022, an international visitor spent an average of USD 1,448.01 per visit to Indonesia, while in 2021 a visitor had to spend USD 3,097.41. This condition was indicated to be caused by the shorter average duration of visit of international visitors in 2022. In addition, the Covid-19 recovery policy which eliminates health-related costs, such as quarantine costs, various

https://www.bps.go.id

Covid-19 tests, and insurance, had also reduced costs to be incurred by international visitors. This can also be seen from the reduced composition of international visitors' health expenditures in 2022. On the other hand, international visitors in 2022 spent the most on accommodation, food and beverages, and also shopping. According to their nationality, Austrian visitors had the largest average spending compared to other nations. Meanwhile, visitors from Malaysia had the smallest average spending when visiting Indonesia.

International visitors with certain characteristics determine the tendency in spending. Binary logistic regression analysis was carried out on the 2022 Passenger Exit Survey data to find out the determinants of international visitor expenditure. The results show that international visitors expenditure is determined by age, gender, nationality, occupation, main purpose of visit, type of main accommodation used, and duration of visit. International visitors who are more likely to have high expenses during their visit to Indonesia are those who: 1) are old (55 years and over); 2) female; 3) not an ASEAN nation; 4) worked as a business manager/executive; professional, or student; 5) visiting Indonesia for personal purposes; 6) stay in hotels, both star and non-star; and 7) stay for a maximum of 12 nights in Indonesia in one visit.

Pandemi Covid-19 dan Wisatawan Mancanegara

"Pariwisata merupakan sektor penting bagi Indonesia, namun mengalami dampak yang berat akibat pandemi Covid-19"

Covid-19 merupakan salah satu krisis terberat yang dirasakan oleh seluruh dunia. Kombinasi guncangan di sisi kesehatan dan ekonomi yang saling berkaitan menciptakan dampak tak terduga yang belum pernah terjadi sebelumnya.

Pariwisata menjadi sektor yang terkena pukulan kuat pandemi Covid-19. Kebijakan penutupan pintu masuk negara memengaruhi kedatangan wisatawan mancanegara, serta seluruh rantai ekonomi yang terlibat dalam kegiatan pariwisata, seperti perhotelan, restoran, dan transportasi.

Organisasi Pariwisata Dunia (UNWTO) memperkirakan pandemi Covid-19 telah mengakibatkan hilangnya Produk Domestik Bruto (PDB) dunia sebesar 1,5 persen hingga 2,8 persen. Adapun sepanjang Januari-Mei 2020, telah terjadi penurunan drastis jumlah wisatawan mancanegara sebesar 56 persen, dan menghilangkan pendapatan ekspor pariwisata hingga USD 320 juta. Selain itu, Covid-19 mengancam hilangnya 100 hingga 120 juta pekerjaan yang terkait secara langsung dengan pariwisata. Seperti yang diketahui, sektor pariwisata sebagian besar berbasis padat karya dan kegiatan usahanya berskala kecil dan menengah.

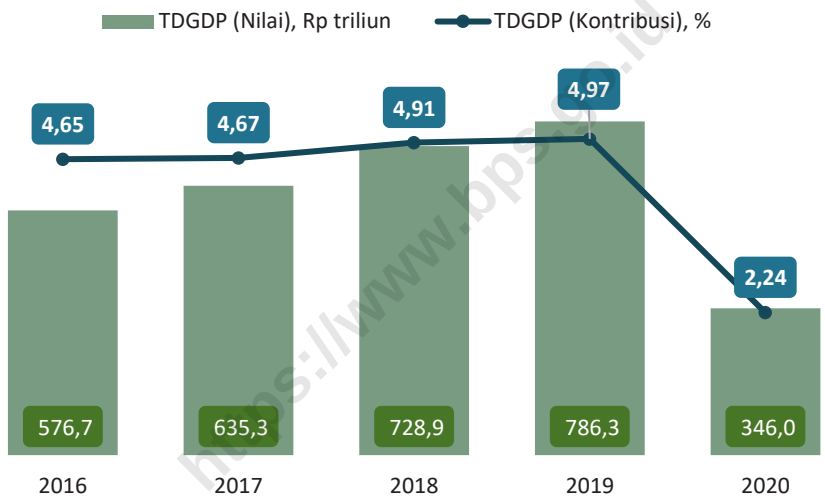

Negara kepulauan dan negara berkembang yang mengandalkan sektor pariwisata untuk menopang perekonomiannya diperkirakan merasakan dampak terbesar akibat pandemi Covid-19. Di Indonesia, pariwisata merupakan sektor yang memiliki peran sangat penting, sehingga adanya pandemi Covid-19 memberikan pengaruh signifikan terhadap perekonomian Indonesia secara keseluruhan.

https://www.bps.go.id

Kondisi ini tercermin dalam *Tourism Direct Gross Domestic Product* (TDGDP) yang menggambarkan nilai ekonomi pariwisata. Sebelum pandemi terjadi yaitu tahun 2019 tercatat bahwa TDGDP Indonesia sebesar Rp 786,3 triliun atau menyumbang 4,97 persen PDB Indonesia. Namun di tahun 2020, pandemi Covid-19 menyebabkan TDGDP merosot menjadi Rp 346,02 triliun, dan kontribusinya terhadap PDB turun menjadi 2,24 persen.

Kerugian lain terlihat dari sisi devisa sektor pariwisata yang selama ini menjadi tiga besar penyumbang devisa Indonesia selain *crude palm oil* (CPO) dan batubara. Menurut data Bank Indonesia, devisa sektor pariwisata di tahun 2019 mencapai USD 16,91 miliar. Akan tetapi,

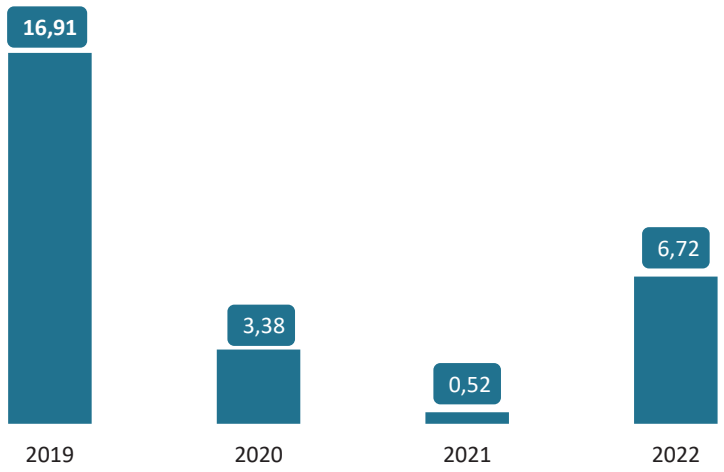

Grafik 1.1. Nilai dan Kontribusi Sektor Pariwisata terhadap PDB Indonesia, 2016-2020

Sumber: *Tourism Satellite Account* 2016-2020, BPS

pandemi Covid-19 di tahun 2020 mengakibatkan anjloknya devisa Indonesia yang cukup drastis hingga menjadi USD 3,38 miliar. Munculnya varian Covid-19 yang baru di tahun 2021 turut memperburuk kondisi pariwisata sehingga devisa pada saat itu tercatat hanya USD 0,52 miliar. Seiring membaiknya situasi Covid-19, seperti luasnya cakupan vaksinasi, pembukaan pintu masuk, serta pelonggaran kebijakan perjalanan telah mendorong kembali aktivitas pariwisata dan menghasilkan devisa sebesar USD 6,72 miliar di tahun 2022, atau pulih 39,74 persen dibanding kondisi tahun 2019.

Grafik 1.2. Devisa Sektor Pariwisata Indonesia (USD miliar), 2019-2022

Kebijakan Wisatawan Mancanegara pada Masa Pemulihan Covid-19

"Upaya pemerintah memulihkan wisatawan mancanegara dinilai cukup berhasil dengan kinerja pada Desember 2022 mencapai 65 persen dari bulan yang sama sebelum pandemi."

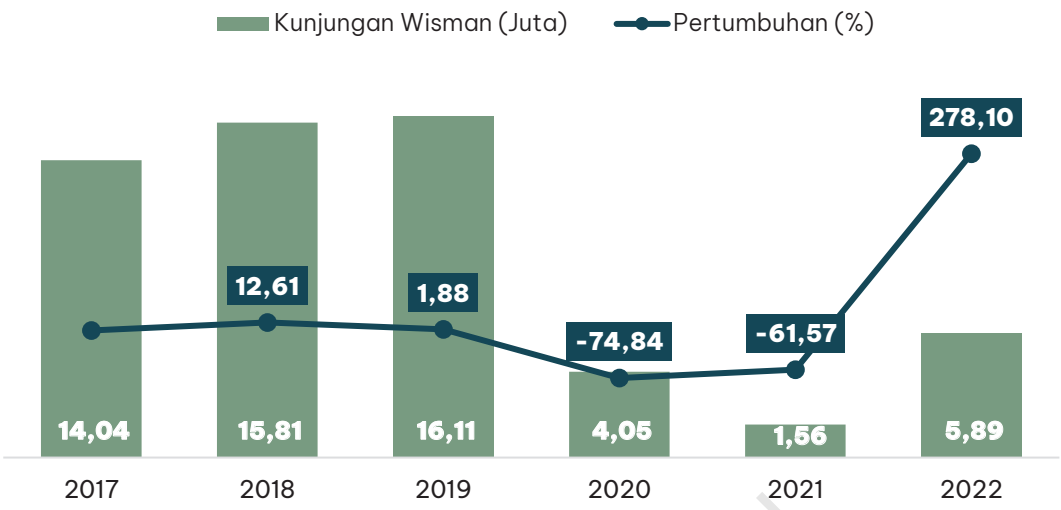

Wisatawan mancanegara merupakan aspek penting dalam pariwisata Indonesia karena kemampuannya dalam mendorong perekonomian melalui penciptaan lapangan pekerjaan, mengembangkan wisata lokal, serta sebagai sarana promosi budaya Indonesia. Sebelum pandemi melanda, wisatawan mancanegara yang masuk ke Indonesia mencapai 16,11 juta kunjungan di tahun 2019. Memasuki tahun 2020, wisatawan mancanegara menurun drastis 74,84 persen menjadi 4,05 juta kunjungan. Kondisi pandemi yang kian memburuk selanjutnya berakibat pada semakin berkurangnya wisatawan mancanegara hingga 1,56 juta kunjungan di tahun 2021.

Namun demikian, tahun 2022 telah menampakkan tanda-tanda pemulihan wisatawan mancanegara, sejalan dengan membaiknya kondisi pandemi dan meningkatnya kepercayaan terhadap keamanan di Indonesia. Wisatawan mancanegara di tahun ini tercatat sebanyak 5,89 juta kunjungan atau meningkat 278,10 persen dibandingkan tahun sebelumnya. Meskipun belum sepenuhnya kembali pada kondisi sebelum pandemi, hal ini memberikan optimisme bagi pariwisata ke depannya.

Selama tahun 2022, berbagai kebijakan telah diterapkan oleh pemerintah Indonesia dalam rangka meningkatkan kontribusi wisatawan mancanegara, dengan memerhatikan situasi perkembangan Covid-19 yang terjadi, baik di dalam maupun luar negeri. Peraturan tersebut

diantaranya pembukaan secara bertahap pintu masuk pelaku perjalanan luar negeri, baik via udara, laut, dan darat. Selain itu, diberi kemudahan dengan pemberlakuan kebijakan bebas visa bagi negara-negara ASEAN, pemberian Visa Kunjungan Saat Kedatangan Khusus Wisata dan pemberian Visa Kunjungan Saat Kedatangan Khusus Wisata di Bali bagi beberapa negara tertentu.

Secara lebih rinci, hasil dari kebijakan yang dilakukan oleh pemerintah terlihat pada kedatangan wisatawan mancanegara yang semakin meningkat setiap bulannya sepanjang tahun 2022. Jika dibandingkan dengan sebelum pandemi, bulan Januari 2022 baru mencapai 11,34 persen dari kondisi tahun 2019. Seiring berjalannya waktu, kondisi ini terus membaik terlebih dengan diselenggarakannya acara internasional MotoGP di Mandalika, Provinsi Nusa Tenggara Barat. Acara seperti ini dapat menjadi daya tarik bagi wisatawan domestik dan juga mancanegara, sehingga memberikan booster bagi pariwisata Indonesia. Di penghujung tahun 2022, pada bulan Desember tercatat wisatawan mancanegara telah hampir mencapai 70 persen kinerja bulan yang sama sebelum pandemi tahun 2019. Hal ini menjadi sinyal positif bagi kebangkitan pariwisata khususnya wisatawan mancanegara di tahun 2023.

Target Ke Depan Wisatawan Mancanegara

"Tahun 2022 telah menunjukkan tanda-tanda pemulihan pariwisata mancanegara, meskipun belum memenuhi nilai yang ditargetkan pemerintah"

Dalam rangka membangun kembali pariwisata, pemerintah perlu menetapkan target sebagai tolak ukur keberhasilan program yang dijalankan. Beberapa target tersebut diantaranya nilai devisa pariwisata, kontribusi PDB pariwisata, jumlah kunjungan wisatawan mancanegara, serta pengeluaran wisatawan mancanegara.

Di tahun 2020, pariwisata mendatangkan devisa sebesar USD 3,38 miliar dan jumlah wisatawan sebanyak 4,05 juta kunjungan dengan rata-rata pengeluaran sebesar USD 2.165,02. Ketiga indikator ini telah mencapai nilai yang ditargetkan oleh pemerintah yang telah disesuaikan dengan kondisi pandemi covid-19. Namun demikian, kontribusi sektor pariwisata terhadap PDB pada tahun 2020 masih berada di bawah target, yaitu 2,4 persen dari target 4 persen.

Pada tahun berikutnya di 2021, capaian devisa semakin menjauh dari target akibat kondisi pandemi yang semakin memburuk. Devisa yang semula ditargetkan antara USD 4,8-8,5 miliar, di tahun 2021 bahkan tidak mencapai USD 1 miliar. Adapun tahun 2022, devisa yang masuk ke Indonesia meningkat menjadi USD 6,72 miliar. Meskipun belum memenuhi target di tahun tersebut, namun telah mencerminkan geliat pemulihan wisatawan mancanegara.

Sejalan dengan devisa pariwisata, jumlah kunjungan wisatawan mancanegara di tahun 2021 tercatat belum mampu mencapai target, yaitu 1,56 juta dari target yang diharapkan yaitu 4-7 juta kunjungan. Di tahun 2022, situasi semakin membaik dan mampu mendatangkan 5,89 juta wisatawan mancanegara. Nilai ini telah melampaui target pemerintah yakni 3,6 juta kunjungan. Di samping itu, rata-rata pengeluaran wisatawan mancanegara juga melampaui nilai yang ditargetkan pemerintah. Pada tahun 2022, wisatawan mancanegara rata-rata mengeluarkan USD 1.448,01 per kunjungan. Meskipun mengalami penurunan dibandingkan tahun sebelumnya, nilai ini telah melampaui target pemerintah.

Untuk tahun 2023 dan 2024, terlihat optimisme pemerintah dapat mencapai pembangunan pariwisata Indonesia yang lebih baik. Target wisatawan mancanegara tahun 2023 sebanyak 8,5 juta kunjungan, sedangkan tahun 2024 sebanyak 16-17 juta kunjungan. Kondisi ini hampir menyamai kondisi sebelum pandemi di tahun 2019.

Karakteristik Wisatawan Mancanegara

Persentase Wisatawan Mancanegara Menurut Jenis Kelamin, 2022

Dalam lima tahun terakhir, wisatawan mancanegara **laki-laki** yang datang ke Indonesia lebih banyak dibandingkan perempuan.

Berdasarkan kelompok kebangsaan, wisatawan mancanegara **laki-laki** juga terlihat mendominasi di semua kelompok.

Timur Tengah menjadi kelompok dengan wisatawan mancanegara **laki-laki** tertinggi yaitu **65,94** persen di tahun 2022

Kondisi Pemulihan Wisatawan Mancanegara menurut Kelompok Kebangsaan, 2022

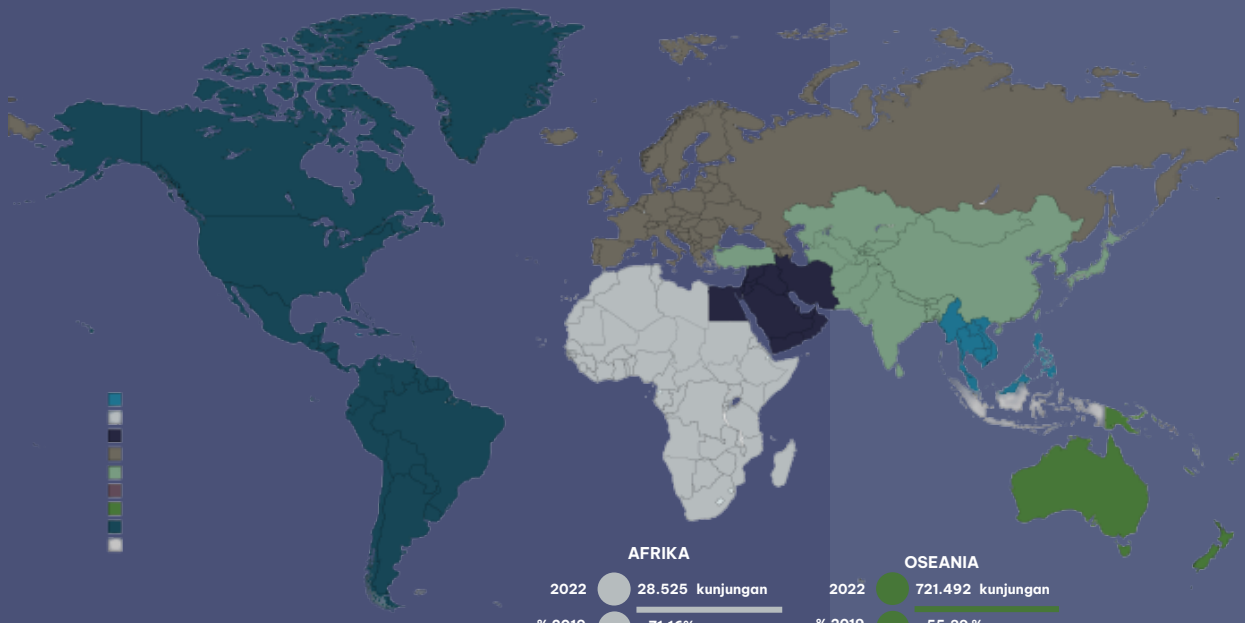

AMERIKA
2022 241.310 kunjungan
% 2019 - 62,81%

TIMUR TENGAH
2022 77.718 kunjungan
% 2019 - 70,55%

EROPA
2022 911.780 kunjungan
% 2019 - 56,08%

ASIA
2022 1.373.448 kunjungan
% 2019 - 73,81 %

ASEAN
2022 2.117.004 kunjungan
% 2019 - 65,62 %

AFRIKA
2022 28.525 kunjungan
% 2019 - 71,16%

OSEANIA
2022 721.492 kunjungan
% 2019 - 55,39 %

Kebangsaan Wisatawan Mancanegara

"Saat pandemi, wisatawan mancanegara didominasi oleh orang berkebangsaan Asia. Namun saat pemulihan, kontribusi wisatawan kebangsaan lainnya mengalami peningkatan."

Indonesia dengan daya tariknya telah mengundang banyak wisatawan dari berbagai belahan dunia. Kebangsaan wisatawan mancanegara yang datang ke Indonesia dapat dikelompokkan menjadi tujuh, yaitu bangsa ASEAN, Asia (selain ASEAN), Timur Tengah, Eropa, Amerika, Oseania, dan Afrika. Kedatangan wisatawan dari kelompok kebangsaan tersebut membentuk suatu pola tertentu. Pola berbeda dapat terlihat pada saat kondisi pandemi masih berlangsung tahun 2021 dan saat masa pemulihan tahun 2022.

Di tahun 2021, lebih dari lima puluh persen wisatawan mancanegara adalah berkebangsaan Asia (selain negara-negara ASEAN). Pada tahun berikutnya, wisatawan mancanegara Asia berkurang menjadi 24,22 persen dari seluruh wisatawan tahun 2022. Berbeda dengan kondisi tersebut, kedatangan wisatawan mancanegara bangsa ASEAN, Timur Tengah, Eropa, Amerika, Oseania, dan Afrika semakin meningkat, mencerminkan semakin banyaknya wisatawan mancanegara yang mengunjungi Indonesia di tahun 2022 dari belahan dunia lain. Misalnya dari kelompok kebangsaan Eropa, yang sebelumnya hanya 3,59 persen di tahun 2021 menjadi 16,31 persen di tahun 2022. Hal ini terlihat juga pada kelompok wisatawan bangsa Amerika, yang semula 1,61 persen menjadi 4,42 persen.

Grafik 2.1. Kontribusi Wisatawan Mancanegara menurut Kebangsaan, 2021-2022

https://www.bps.go.id

■ Kinerja Tahun 2022 terhadap 2019

Upaya mendorong pariwisata Indonesia terus dilakukan secara bertahap, termasuk mendorong kedatangan wisatawan mancanegara. Jumlah wisatawan mancanegara tahun 2022 tercatat sebanyak 5,89 juta orang. Kinerja tahun 2022 menunjukkan bahwa kondisi ini telah mencapai 36,56 persen dari sebelum pandemi tahun 2019, atau masih tersisa 63,44 persen untuk menyamai kondisi tahun 2019. Meskipun demikian, hal ini dapat menjadi sinyal positif untuk tahun-tahun berikutnya.

Berdasarkan kebangsaan, kelompok yang pulih paling cepat adalah wisatawan Eropa sebanyak 960.410 kunjungan atau membutuhkan 55,32 persen untuk menuju kondisi tahun 2019. Wisatawan berbangsa Oseania dan Amerika juga merupakan kelompok dengan tingkat pemulihan tercepat, yaitu berturut-turut membutuhkan 55,32 persen dan 59,92 persen lagi untuk mencapai keadaan 2019. Sementara itu, pemulihan paling lambat terlihat pada wisatawan bangsa Asia, dimana kondisi 2019 baru akan tercapai ketika kunjungan wisatawan bangsa Asia bertambah 72,80 persen.

Tren Wisatawan Mancanegara

Selama tahun 2018 hingga 2022, tren wisatawan mancanegara bangsa ASEAN, Asia (selain ASEAN), Timur Tengah, Eropa, Amerika, Oseania, dan Afrika menunjukkan pola yang mirip. Sebelum Covid-19 yaitu tahun 2018 dan 2019, jumlah wisatawan yang datang ke Indonesia cukup tinggi. Dimulainya Covid-19 di tahun 2020 membuat tren ini melandai dan pada titik terendah terjadi di tahun 2021. Di masa pemulihan tahun 2022, wisatawan mancanegara kembali masuk ke Indonesia dan kondisi ini terjadi pada semua kelompok kebangsaan.

Grafik 2.3. Perkembangan Wisatawan Mancanegara menurut Kelompok Kebangsaan (ribu kunjungan), 2022

Sumber: - Kementerian Hukum dan Hak Asasi Manusia (Direktorat Jenderal Imigrasi)

https://www.bps.go.id

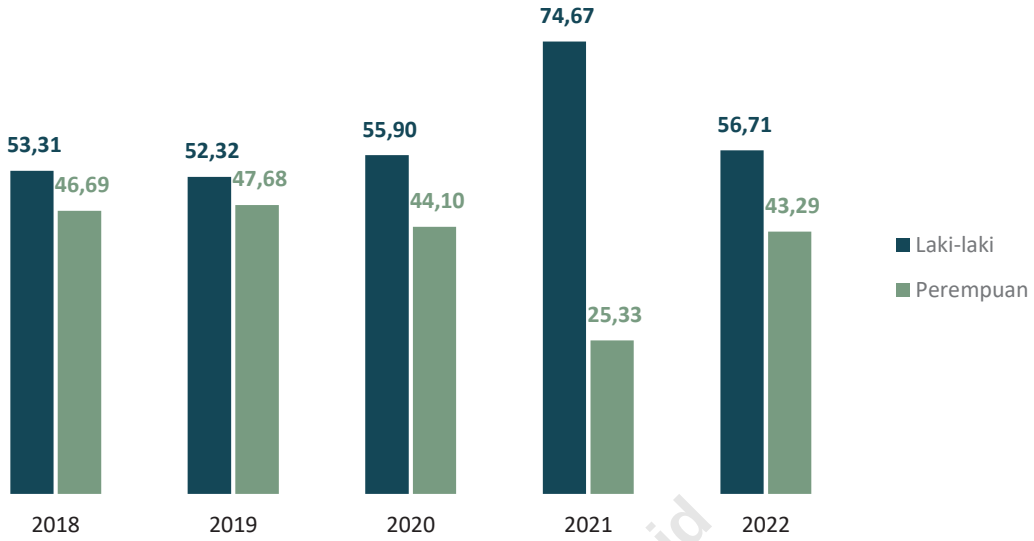

Jenis Kelamin Wisatawan Mancanegara

"Di tahun 2022, wisatawan laki-laki lebih banyak dibandingkan wisatawan perempuan."

Dalam lima tahun terakhir, wisatawan mancanegara laki-laki yang datang ke Indonesia lebih banyak dibandingkan perempuan. Pola ini terlihat semakin jelas kala pandemi Covid-19 terjadi. Di tahun 2019, wisatawan laki-laki tercatat sebesar 52,32 persen, kemudian meningkat pada tahun 2020 dan 2021 berturut-turut menjadi 55,90 persen dan 74,67 persen. Pada masa pemulihan di tahun 2022, kondisi kembali mendekati masa sebelum covid-19, yaitu wisatawan mancanegara terdiri dari 56,71 persen laki-laki dan 43,29 persen perempuan.

Berdasarkan kelompok kebangsaan, wisatawan mancanegara laki-laki juga terlihat mendominasi di semua kelompok. Timur Tengah menjadi kelompok dengan wisatawan mancanegara laki-laki tertinggi yaitu 65,94 persen di tahun 2022.

Umur Wisatawan Mancanegara

"Di tahun 2022, mayoritas wisatawan berusia muda antara kelompok 25-34 tahun dan 35-44 tahun."

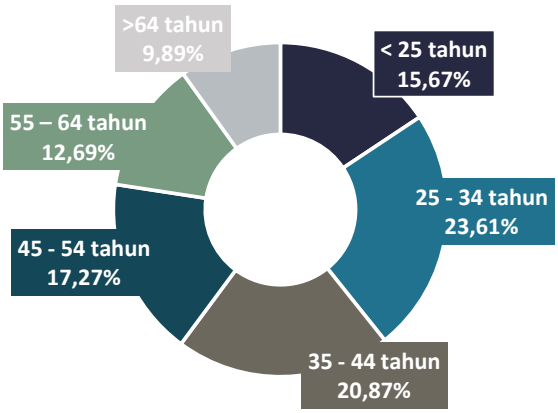

Perjalanan luar negeri berbeda dengan perjalanan dalam negeri. Perjalanan luar negeri membutuhkan kesiapan yang lebih matang, baik dari faktor jarak, kesehatan, kekuatan fisik, biaya, serta kelengkapan dokumen yang perlu dipenuhi untuk masuk ke dalam wilayah negara lain. Berbagai faktor tersebut dapat memengaruhi keputusan seseorang pada umur tertentu untuk melakukan perjalanan ke luar negeri.

Hal ini tercermin dari wisatawan mancanegara yang didominasi oleh kelompok usia muda. Pada tahun 2022, wisatawan mancanegara terdiri 23,61 persen kelompok usia 25-34 tahun dan 20,87 persen kelompok usia 35-44 tahun. Di sisi lain, kelompok usia di bawah 25 tahun termasuk anak-anak sebesar 15,67 persen dan di atas 64 tahun sebesar 9,89 persen. Kondisi ini menyiratkan adanya keterbatasan orang dalam kelompok usia tersebut dalam melakukan perjalanan.

Pola serupa juga terlihat di hampir semua kelompok kebangsaan bahwa wisatawan mancanegara usia 25-34 tahun paling banyak datang ke Indonesia, dan wisatawan berusia lebih dari 54 tahun adalah yang paling sedikit kedatangannya. Namun pada kelompok Oseania nampak hal berbeda bahwa wisatawan berusia lebih dari 54 tahun cukup tinggi bahkan melebihi wisatawan kelompok usia 25-34 tahun.

Pekerjaan Wisatawan Mancanegara

"Wisatawan mancanegara tahun 2022 sebagian besar bekerja sebagai profesional dan manajer."

Wisatawan mancanegara yang datang ke Indonesia memiliki pekerjaan yang bervariasi. Di tahun 2022, sebagian besar wisatawan memiliki pekerjaan utama dalam bidang profesional yakni sebesar 38,54 persen. Bidang profesional ini mencakup ahli ilmu pengetahuan dan teknis, kesehatan, pendidikan, bisnis dan administrasi, teknologi, serta hukum, sosial, dan budaya. Tertinggi kedua adalah wisatawan yang bekerja sebagai manajer sebesar 22,18 persen. Kedua jenis pekerjaan ini erat kaitannya dengan perjalanan luar negeri, seperti melakukan *Meeting, Incentive, Convention, and Exhibition* (MICE). Selanjutnya, wisatawan dengan pekerjaan sebagai pegawai pemerintah dan karyawan sebesar 15,49 persen. Adapun wisatawan yang berstatus pelajar sebesar 11,06 persen dan pekerjaan lainnya sebesar 12,73 persen.

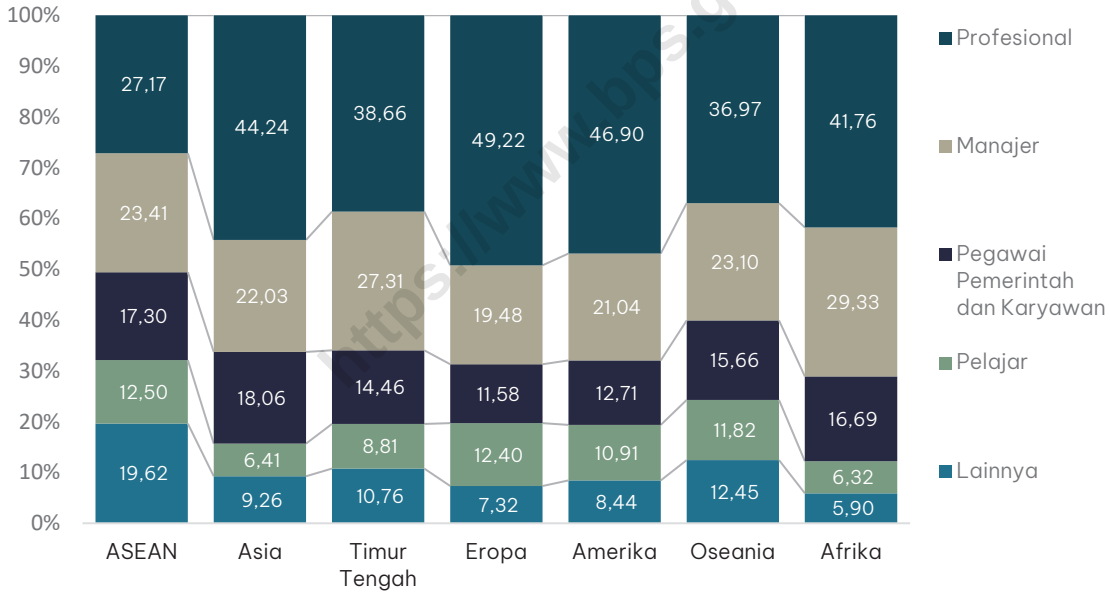

Pada setiap kelompok kebangsaan, terlihat pola wisatawan mancanegara dengan pekerjaan utama sebagai profesional adalah yang paling banyak dibandingkan jenis pekerjaan lainnya. Hampir setengah dari wisatawan berbangsa Eropa memiliki pekerjaan utama sebagai profesional. Proporsi ini adalah yang paling tinggi dibandingkan kelompok kebangsaan lainnya. Sementara itu, persentase wisatawan dengan pekerjaan utama manajer tertinggi terdapat pada kelompok bangsa Afrika, yakni 29,33 persen.

Grafik 2.8. Wisatawan Mancanegara menurut Pekerjaan Utama (%), 2022

Sumber: *Passenger Exit Survey* 2022, BPS

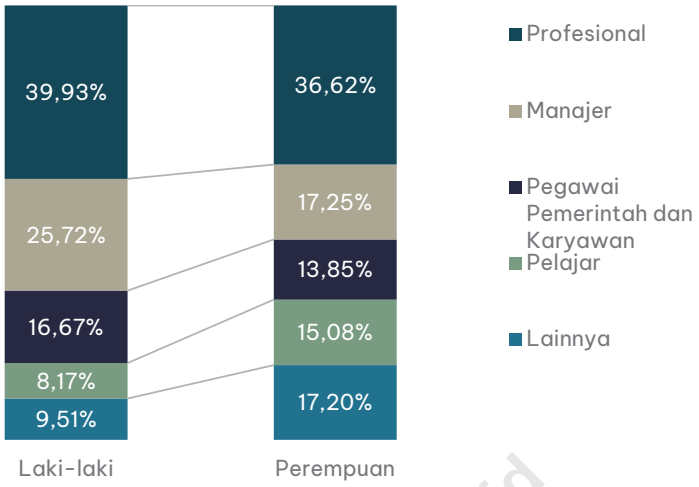

Grafik 2.9. Wisatawan Mancanegara menurut Pekerjaan Utama dan Kebangsaan (%), 2022

Sumber: *Passenger Exit Survey* 2022, BPS

Pada kelompok laki-laki, wisatawan dengan pekerjaan profesional adalah yang paling banyak dibandingkan pekerjaan lainnya sebesar 39,93 persen, sedangkan yang paling sedikit adalah wisatawan laki-laki berstatus pelajar sebesar 15,52 persen. Pada kelompok perempuan, wisatawan yang bekerja sebagai profesional juga paling tinggi yaitu 36,62 persen. Namun pada kelompok ini, wisatawan yang paling sedikit bekerja dalam bidang pemerintahan dan karyawan yakni 13,85 persen.

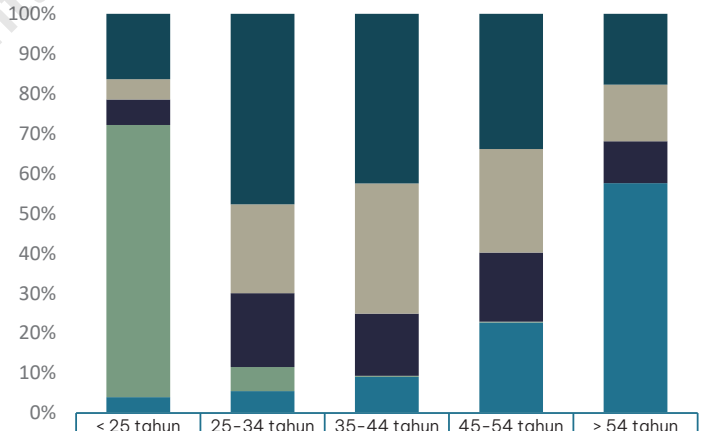

Grafik 2.10. Wisatawan Mancanegara menurut Pekerjaan Utama dan Jenis Kelamin (%), 2022

Sumber: *Passenger Exit Survey* 2022, BPS

Berdasarkan kelompok umur, wisatawan dengan umur kurang dari 25 tahun didominasi oleh wisatawan berstatus pelajar. Pada kelompok umur 25-34 tahun dan 35-44 tahun, mayoritas wisatawan bekerja sebagai profesional, manajer, pegawai pemerintah dan karyawan. Untuk wisatawan kelompok umur 45-54 tahun relatif bervariasi , yaitu bekerja sebagai profesional, manajer, dan pekerjaan lainnya. Sementara itu, pada kelompok umur lebih dari 54 tahun, lebih dari setengah wisatawan memiliki pekerjaan jenis lainnya.

Tujuan Berkunjung Wisatawan Mancanegara

"Mayoritas wisatawan mancanegara datang ke Indonesia untuk berlibur. Kecenderungan berlibur paling tinggi dilakukan oleh kelompok wisatawan bangsa Eropa dibandingkan bangsa lainnya."

Pandemi Covid-19 selama kurang lebih dua tahun telah membatasi aktivitas semua orang. Seiring melandainya kasus Covid-19 mendorong masyarakat untuk bepergian, salah satunya berlibur. Sebesar 72,80 persen wisatawan mancanegara pada tahun 2022 datang ke Indonesia untuk berlibur. Sisanya sekitar 17,10 persen datang untuk tujuan personal lainnya, seperti mengunjungi teman atau saudara, belanja, berobat, dan sebagainya. Sementara itu, 10,10 persen wisatawan mancanegara datang dalam rangka berbisnis.

Secara umum, pola yang sama terlihat pada hampir semua kelompok kebangsaan bahwa wisatawan pada masing-masing bangsa mayoritas berkunjung ke Indonesia untuk berlibur, diikuti oleh tujuan personal lainnya, dan terakhir untuk bisnis. Hanya pada bangsa Afrika, wisatawan dengan maksud utama berbisnis lebih tinggi dibanding personal lainnya.

Grafik 3.1. Wisatawan Mancanegara menurut Maksud Kunjungan Utama (%), 2022

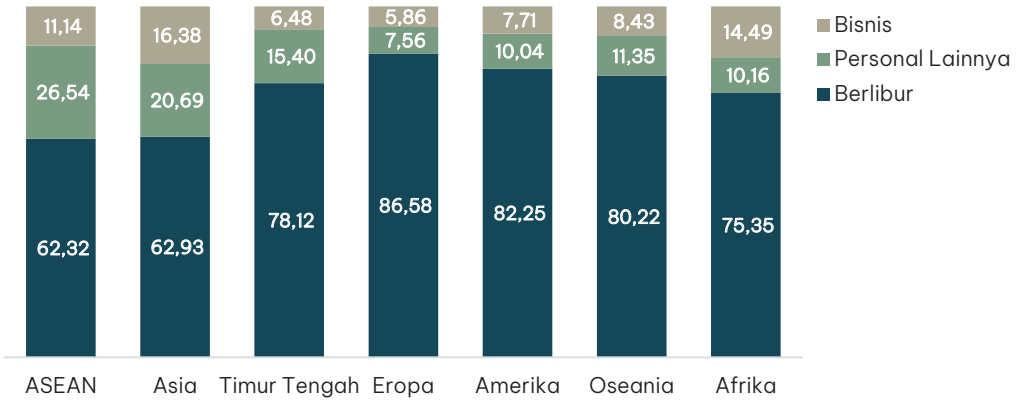

Sumber: *Passenger Exit Survey* 2022, BPS

Jika ditelaah lebih lanjut, wisatawan yang bermaksud untuk berlibur paling tinggi dilakukan oleh kelompok bangsa Eropa. Sebesar 86,58 persen dari seluruh wisatawan Eropa datang untuk berlibur di Indonesia. Adapun kelompok wisatawan bangsa ASEAN adalah yang terendah dalam hal berlibur yakni sebesar 62,32 persen. Di sisi lain, maksud kunjungan personal lainnya paling tinggi dilakukan oleh kelompok bangsa ASEAN sebesar 26,54 persen. Sementara kelompok bangsa Asia (selain ASEAN) adalah paling tinggi dalam hal kedatangan untuk maksud berbisnis yaitu 16,38 persen.

https://www.bps.go.id

Grafik 3.2. Wisatawan Mancanegara menurut Maksud Kunjungan Utama dan Kebangsaan (%), 2022

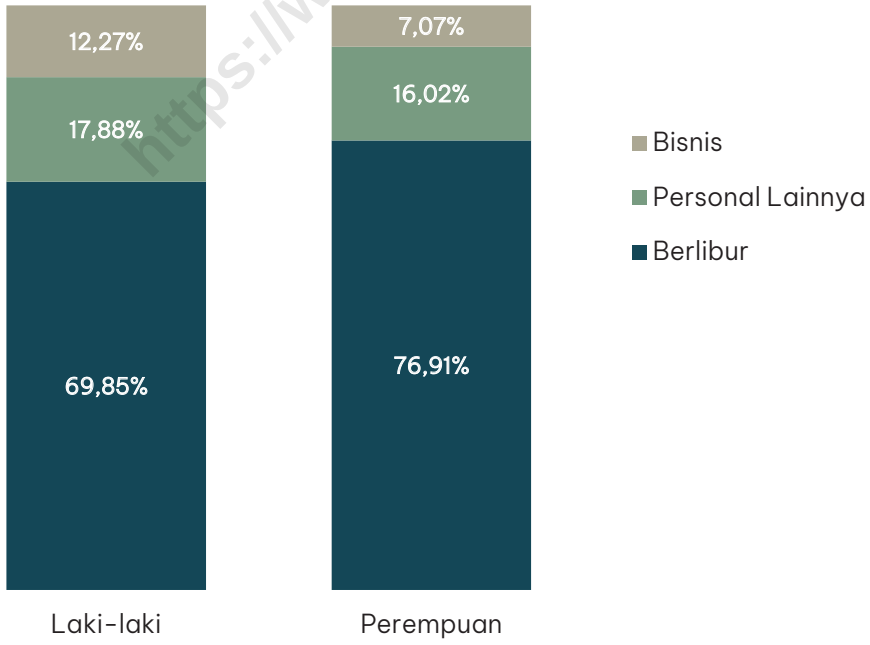

Sumber: *Passenger Exit Survey* 2022, BPS

Berdasarkan jenis kelamin, baik kelompok laki-laki dan perempuan mayoritas berkunjung ke Indonesia untuk berlibur, lalu berikutnya untuk personal lainnya, dan paling sedikit untuk berbisnis. Jika dbandingkan, aktivitas berlibur lebih tinggi dilakukan oleh kelompok perempuan dibanding laki-laki. Dari seluruh wisatawan perempuan tahun 2022, sebesar 76,91 persen di antaranya datang untuk berlibur, sedangkan pada kelompok wisatawan laki-laki sebesar 69,85. Di sisi lain, kunjungan dengan maksud personal lainnya dan berbisnis paling tinggi dilakukan oleh kelompok wisatawan laki-laki.

Adapun menurut kelompok umur, sebagian besar wisatawan pada berbagai kelompok adalah untuk berlibur. Wisatawan dalam rentang umur 25-34 tahun memiliki kecenderungan paling tinggi untuk berlibur dibandingkan kelompok umur lainnya, yaitu sebesar 78,89 persen. Lebih jauh lagi, kunjungan untuk tujuan bisnis cenderung dilakukan oleh wisatawan umur 35-44 tahun. Sementara kunjungan dengan maksud personal lainnya cenderung dilakukan oleh wisatawan berumur di atas 54 tahun.

Destinasi Favorit Wisatawan Mancanegara

"Provinsi Bali masih menjadi tujuan favorit wisatawan mancanegara yang datang ke Indonesia."

Pada tahun 2022, sebagian besar wisatawan mancanegara yang datang ke Indonesia memilih Bali sebagai destinasi provinsi yang mencapai angka 46,72 persen dari seluruh wisatawan mancanegara. Dari wisatawan tersebut, mayoritas berbangsa Eropa dan Oseania, berturut-turut sebesar 32,01 persen dan 24,40 persen dari seluruh wisatawan yang berkunjung ke Bali.

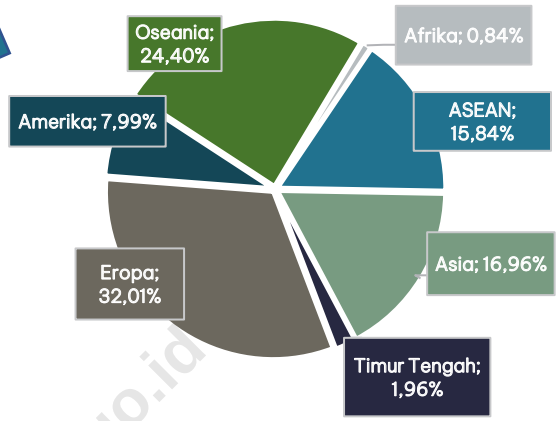

Selanjutnya, provinsi DKI Jakarta menjadi destinasi favorit kedua wisatawan mancanegara dengan persentase wisatawan sebesar 13,03 persen. Seperti diketahui bahwa DKI Jakarta merupakan pusat pemerintahan sekaligus pusat bisnis yang memberikan daya tarik tersendiri bagi wisatawan mancanegara. Provinsi sebagai tujuan kunjungan tertinggi ketiga adalah Kepulauan Riau dengan persentase sebesar 11,81 persen. Provinsi lain yang menjadi tujuan wisatawan mancanegara dengan persentase lebih dari dua persen diantaranya Nusa Tenggara Barat, Jawa Timur, Jawa Barat, DI Yogyakarta, dan Riau.

Lama Kunjungan Wisatawan Mancanegara

"Wisatawan bangsa Timur Tengah memiliki rata-rata durasi tinggal terlama di Indonesia."

Durasi tinggal wisatawan mancanegara atau duration of visit di Indonesia sebesar 14,32, yang artinya rata-rata seorang wisatawan mancanegara tinggal di Indonesia selama 14 hingga 15 malam di tahun 2022. Bangsa Timur Tengah adalah wisatawan dengan lama tinggal di Indonesia paling panjang, yaitu 19 hingga 20 malam. Di sisi lain, wisatawan bangsa ASEAN memiliki waktu paling singkat saat berkunjung di Indonesia yaitu 9 hingga 10 malam. Selain itu, berdasarkan jenis kelamin dan kelompok umur, wisatawan laki-laki pada usia 35-44 tahun memiliki rata-rata durasi tinggal di Indonesia terlama yaitu 16 hingga 17 malam.

Akomodasi Wisatawan Mancanegara

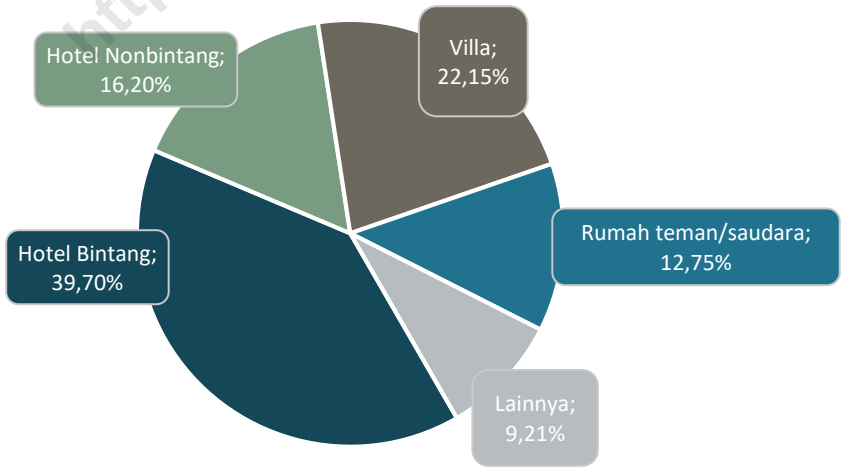

"Akomodasi hotel bintang paling diminati oleh wisatawan mancanegara. Selain itu, villa menjadi pilihan wisatawan dibandingkan hotel non bintang."

Jasa akomodasi merupakan salah satu pendukung kegiatan pariwisata. Terlebih jika berhubungan dengan wisatawan mancanegara yang membutuhkan tempat tinggal selama berada di Indonesia. Kedatangan wisatawan mancanegara akan memberdayakan usaha akomodasi di sekitar lokasi wisata.

Di tahun 2022, sebagian besar wisatawan mancanegara memilih hotel bintang sebagai akomodasi utama selama berada di Indonesia, yaitu sebesar 39,69 persen. Akomodasi berbentuk villa juga banyak diminati oleh wisatawan mancanegara dengan persentase sebesar 22,15 persen. Di urutan ketiga, hotel non bintang menjadi pilihan bagi wisatawan mancanegara sebesar 16,20 persen. Sementara itu, pilihan akomodasi menginap di rumah teman atau keluarga juga cukup tinggi yaitu 12,75 persen.

https://www.bps.go.id

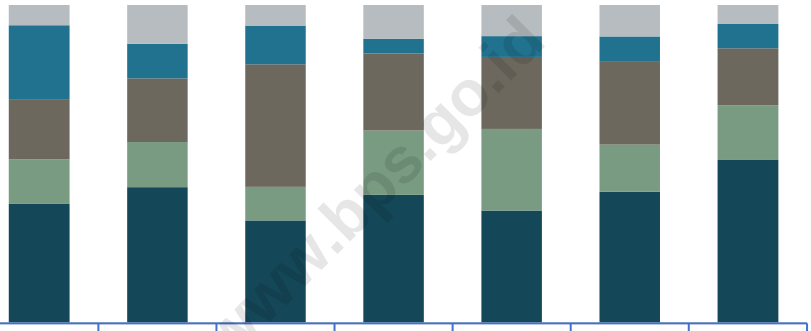

Grafik 3.9. Wisatawan Mancanegara menurut Akomodasi Utama (%), 2022

Sumber: *Passenger Exit Survey* 2022, BPS

Pada setiap kelompok bangsa, mayoritas wisatawan memilih hotel bintang sebagai akomodasi utama, kecuali wisatawan bangsa Timur Tengah. Di tahun 2022, 38,51 persen wisatawan Timur Tengah menggunakan villa sebagai akomodasi utama, sedangkan wisatawan yang menggunakan hotel bintang sebesar 32,30 persen. Adapun kecenderungan menginap di hotel non bintang ditemukan pada kelompok wisatawan bangsa Amerika yakni 25,62 persen. Di sisi lain, wisatawan bangsa ASEAN memiliki kecenderungan tertinggi dalam hal menginap di rumah teman/saudara dibandingkan bangsa lainnya, dengan persentase sebesar 23,47 persen.

https://www.bps.go.id

Rata-Rata Pengeluara Wisatawan Mancanegara per Kunjungan

"Rata-rata pengeluaran Wisatawan mancanegara tahun 2022 mengalami penurunan sebesar 53,25 Persen"

Selama berkunjung di Indonesia, rata-rata pengeluaran wisatawan mancanegara tahun 2022 mengalami penurunan sebesar 53,25 persen dibandingkan tahun 2021, yaitu dari 3.097,41 dolar AS menjadi 1.448,01 dolar AS. Kendati demikian, rata-rata pengeluaran wisatawan mancanegara tahun 2022 masih lebih tinggi dibandingkan dengan rata-rata pengeluaran wisatawan mancanegara tahun 2019 (sebelum pandemi Covid-19) yang mencapai 1.145,64 dolar AS.

Grafik 4.1. Rata-rata Pengeluaran Wisman per Kunjungan Tahun 2019-2022 (US$)

Sumber: *Passenger Exit Survey* 2019 - 2022, BPS

Penurunan rata-rata pengeluaran wisatawan mancanegara tahun 2022, utamanya disebabkan berkurangnya lama tinggal wisatawan mancanegara. Pelbagai pembukaan dan pelonggaran akses wisatawan mancanegara yang dilakukan secara bertahap membuat lama tinggal wisatawan mancanegara berkurang. Sejak awal 2022 terjadi pengurangan masa karantina menjadi 7 hari, meskipun syarat wajib PCR dan syarat Asuransi dengan nilai tanggungan 100.000 dolar AS masih tetap berlaku. Kemudian pada Februari 2022, pemerintah memangkas waktu karantina bagi yang wisatawan mancanegara yang telah memperoleh vaksin dosis lengkap, kewajiban PCR yang tidak lagi harus menunggu hari ke-6, dan nilai tanggungan asuransi turun menjadi 25.000 dolar AS. Selain itu, pada periode ini pintu masuk wisatawan mancanegara diperluas hingga mencakup tujuh bandara, lima pelabuhan laut dan tiga pos lintas batas (sebelumnya hanya Bandara Soekarno-Hatta dan I Gusti Ngurah Rai).

Pelonggaran yang signifikan dilakukan sejak awal Maret 2022 dengan penerapan uji coba bebas karantina di Provinsi Bali dan Kepulauan Riau. Pada 23 Maret 2022, pembebasan kewajiban karantina secara luas resmi diberlakukan bagi wisatawan mancanegara yang telah menerima vaksin dosis lengkap. Kewajiban asuransi juga diserahkan kepada pengelola atau pemerintah daerah masing-masing destinasi wisata. Hingga akhir Desember 2022, pintu masuk wisatawan mancanegara telah ditetapkan menjadi 16 bandara, seluruh pelabuhan laut internasional dan 8 Pos Lintas Batas. Selain itu, tidak ada lagi syarat pre-departure dan arrival test, kecuali bagi yang bergejala, dan tidak ada lagi syarat wajib asuransi. Pelbagai bentuk pembukaan dan pelonggaran akses wisatawan mancanegara di sepanjang tahun 2022 mendorong menurunnya rata-rata pengeluaran wisatawan mancanegara per kunjungan.

https://www.bps.go.id

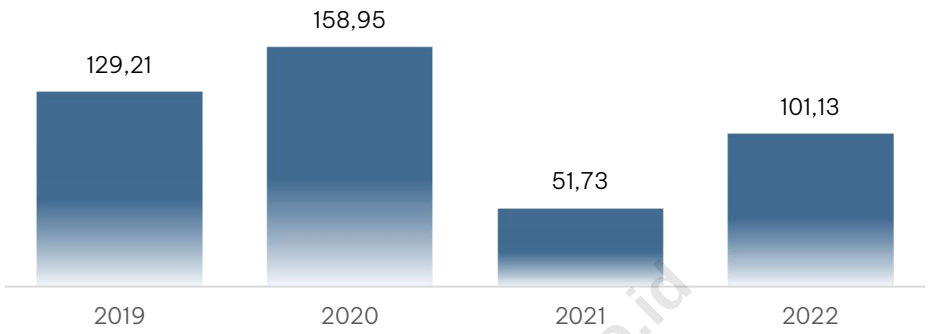

Rata-rata Pengeluaran Wisatawan Mancanegara per Malam

"Berbeda dengan rata-rata pengeluaran wisatawan mancanegara per kunjungan, rata-rata pengeluaran Wisatawan mancanegara per malam pada 2022 justru mengalami kenaikan sebesar 95,50 persen"

Berbeda dengan rata-rata pengeluaran wisatawan mancanegara per kunjungan yang mengalami penurunan, rata-rata pengeluaran wisatawan mancanegara per malam pada tahun 2022 justru menunjukkan kenaikan yang signifikan. Pada tahun 2022 rata-rata pengeluaran wisatawan mancanegara per malam mencapai 101,13 dolar AS, naik 95,50 persen dibandingkan dengan tahun 2021. Salah satu faktor yang membuat naiknya rata-rata pengeluaran wisatawan mancanegara per malam adalah pengahapusan kebijakan karantina bagi wisatawan mancanegara yang dilakukan secara bertahap pada tahun 2022. Penghapusan kebijakan tersebut membuat rata-rata lama kunjungan wisatawan mancanegara pada tahun

2022 menurun drastis yang tahun sebelumnya 59,88 malam menjadi hanya 14,32 malam. Hal itu, membuat rata-rata pengeluaran wisatawan mancanegara per malam tahun 2022 meningkat tajam.

Grafik 4.2. Rata-rata Pengeluaran Wisman per Malam Tahun 2019-2022 (US$)

Distribusi Pengeluaran Wisatawan Mancanegara

"Distribusi pengeluaran wisatawan mancanegara tahun 2022 yang digunakan untuk keperluan kesehatan mengalami penurunan terdalam sebesar 7,02 poin"

Apabila ditinjau dari jenis pengeluarannya, sebagian besar pengeluaran wisatawan mancanegara selama berada di Indonesia pada tahun 2022 digunakan untuk akomodasi, yaitu mencapai 582,57 dolar AS atau 40,23 persen dari total pengeluaran wisatawan mancanegara, diikuti pengeluaran untuk makanan dan minuman sebesar 317,72 dolar AS (21,94 persen). Sementara, pengeluaran wisatawan mancanegara paling kecil digunakan untuk keperluan pemandu wisata, yaitu hanya 4,54 dolar AS (0,31 persen). Distribusi pengeluaran wisatawan mancanegara yang digunakan untuk keperluan makan dan minum pada tahun 2022 mengalami kenaikan terbesar, yaitu naik sebesar 5,08 poin. Di sisi lain, distribusi pengeluaran wisatawan mancanegara yang digunakan untuk keperluan kesehatan mengalami penurunan terdalam, yaitu turun sebesar 7,02 poin menjadi 0,46 persen saja. Salah satu penyebab menurunnya pengeluaran kesehatan adalah sejak Juni 2022, wisatawan mancanegara sudah tidak diwajibkan melakukan pre-departure dan arrival test. Tidak hanya itu, kewajiban asuransi bagi wisatawan mancanegara juga sudah dihapuskan.

Rata-rata pengeluaran wisatawan mancanegara berdasarkan kebangsaan

"Wisman asal Austria memiliki pengeluaran terbesar, mencapai 2.767,82 dolar AS. Sementara itu, wisman asal Malaysia memiliki pengeluaran terkecil, hanya 669,41 dolar AS"

Apabila ditinjau dari kebangsaan, pengeluaran per kunjungan terbesar berasal dari Austria, yaitu sebesar 2.767,82 dolar AS. Kemudian diikuti oleh wisman yang berasal dari Finlandia (2.721,26 dolar AS), Kanada (2.543,70 dolar AS) , Belgia (2.458,84 dolar AS), dan Swiss 2.458,05. Sementara itu, pengeluaran terendah berasal dari Malaysia yang hanya mencapai 669,41 dolar AS diikuti oleh Singapura yang mencapai 796,59 dolar AS.

Determinan Pengeluaran Wisatawan Mancanegara di Indonesia

ilustrasi: storyset.com

Pandemi Covid-19 yang melanda Indonesia sejak awal tahun 2020 telah menorehkan catatan sejarah terpuruknya industri pariwisata di Indonesia. Sepanjang tahun 2020, jumlah wisatawan mancanegara yang masuk ke Indonesia hanya sekitar 25 persen dari jumlah wisatawan yang masuk ke Indonesia pada tahun 2019 (Kemenparekraf, 2020). Penerapan kebijakan pembatasan sosial berskala besar serta ditutupnya akses keluar dan masuk Indonesia berdampak pada penurunan pendapatan negara di sektor pariwisata.

Jika dilihat berdasarkan pertumbuhan Produk Domestik Bruto (PDB) lapangan usaha tahun 2020, sektor pariwisata menjadi sektor yang paling terpuruk kedua, setelah sektor transportasi dan pergudangan (BPS, 2020). Namun, pertumbuhan PDB sektor pariwisata tahun 2022 merupakan yang tertinggi kedua, setelah sektor transportasi dan pergudangan (BPS, 2022). Tentu saja, hal ini menjadi indikasi yang baik bagi awal kebangkitan industri pariwisata di Indonesia.

Sektor pariwisata merupakan salah satu sektor pendorong pembangunan sosial dan ekonomi, serta pencipta lapangan kerja terbesar di dunia (WTTC, 2020). Sektor tersebut memberikan dampak secara langsung (melalui PDB dan lapangan kerja) serta dampak tidak langsung (melalui keterkaitan rantai pasokan dengan sektor lain) terhadap perekonomian.

Di Indonesia, pariwisata merupakan salah satu penggerak pertumbuhan ekonomi nasional. Sektor pariwisata diharapkan dapat meningkatkan jumlah kunjungan wisatawan mancanegara, perjalanan wisatawan nusantara, peningkatan penerimaan devisa dari sektor pariwisata, penyerapan tenaga kerja pariwisata, dan kenaikan indeks daya saing pariwisata

https://www.bps.go.id

Indonesia di ranah global (Agustina dkk, 2020). Presiden Joko Widodo menekankan kembali pada rapat terbatas tahun 2019 bahwa sektor pariwisata harus menjadi motor bagi peningkatan devisa dan menciptakan *multiplier effect* yang mendorong pertumbuhan ekonomi.

Karakteristik yang Memengaruhi Pengeluaran Wisatawan Mancanegara

Dampak pariwisata terhadap perekonomian pada suatu wilayah ditentukan oleh pengeluaran atau konsumsi pariwisata yang terjadi di wilayah tersebut (IRTS, 2008). Semakin tinggi pengeluaran pariwisata yang dilakukan oleh wisatawan, semakin tinggi juga penerimaan devisa dan pendapatan negara dari sektor pariwisata.

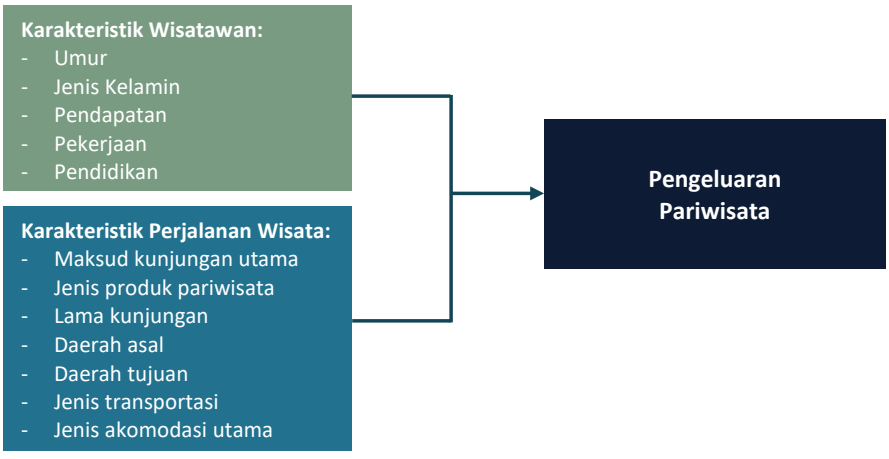

Pengeluaran pariwisata mengacu pada jumlah yang dibayarkan untuk memperoleh barang dan jasa konsumsi, serta barang berharga, untuk digunakan sendiri atau untuk diberikan, untuk dan selama perjalanan wisata. Termasuk pengeluaran oleh pengunjung sendiri, serta pengeluaran yang dibayar atau diganti oleh orang lain.

Sementara itu, perjalanan wisata dapat diklasifikasikan berdasarkan karakteristik (sosial ekonomi) wisatawan dan karakteristik perjalanan wisata itu sendiri (IRTS, 2008). Dengan kata lain, pola pengeluaran pariwisata dari sebuah perjalanan wisata juga bergantung pada karakteristik wisatawan dan karakteristik perjalanan wisata.

Karakteristik wisatawan terdiri atas umur, jenis kelamin, pendapatan, pekerjaan, dan pendidikan. Sementara itu, karakteristik perjalanan wisata terdiri atas maksud kunjungan utama, jenis produk pariwisata, lama kunjungan, daerah asal, daerah tujuan, jenis transportasi, dan jenis akomodasi utama. Keterkaitan antara karakteristik wisatawan dan karakteristik perjalanan wisata dengan pengeluaran pariwisata disajikan pada Gambar 5.1.

https://www.bps.go.id

Gambar 5.1. Keterkaitan antara Karakteristik Wisatawan dan Karakteristik Perjalanan Wisata dengan Pengeluaran Pariwisata

Pada bab ini, **pengeluaran pariwisata** didefinisikan sebagai total pengeluaran per hari dari wisatawan mancanegara (baik dikeluarkan oleh sendiri maupun dibiayai oleh pihak lain) selama berkunjung ke Indonesia. Pengeluaran pariwisata, yang selanjutnya disebut sebagai **pengeluaran wisatawan mancanegara**, dikelompokkan menjadi dua kategori, yaitu kategori tinggi (di atas rata-rata) dan rendah (sama dengan atau di bawah rata-rata).

Karakteristik yang dicakup meliputi umur, jenis kelamin, kebangsaan, pekerjaan, maksud kunjungan utama, lama kunjungan, dan jenis akomodasi utama yang digunakan. Berdasarkan seluruh karakteristik wisatawan mancanegara yang berkunjung ke Indonesia pada tahun 2022, pengeluaran wisatawan mancanegara secara umum cenderung termasuk pada kategori rendah.

Tabel 5.1. Persentase Wisatawan Mancanegara menurut Karakteristik dan Kategori Pengeluaran, 2022

Karakteristik		Kategori Pengeluaran (%)		
		Rendah	Tinggi	Total
(1)	(2)	(3)	(4)	(5)
Umur	<= 34	72,91	27,09	100,00

https://www.bps.go.id

Jika dilihat secara lebih rinci pada Tabel 5.1, terdapat perbedaan pengeluaran berdasarkan setiap karakteristik wisatawan mancanegara. Wisatawan mancanegara yang cenderung memiliki lebih banyak pengeluaran yaitu wisatawan mancanegara perempuan, berusia muda (usia maksimal 34 tahun), berasal dari luar wilayah Asia, bekerja sebagai profesional, berkunjung ke Indonesia untuk tujuan pribadi, menginap di hotel bintang, dan lama kunjungan maksimal 12 malam.

Wisatawan mancanegara yang berasal dari luar Asia meliputi wisatawan dari Afrika, Amerika, Eropa, Timur Tengah, Oseania. Adapun wisatawan mancanegara yang bekerja sebagai profesional meliputi mereka yang bekerja dalam bidang ahli ilmu pengetahuan dan teknik, kesehatan, pendidikan, bisnis dan administrasi, teknologi informasi dan komunikasi, hukum, serta sosial dan budaya.

Maksud kunjungan wisatawan mancanegara yang bersifat pribadi antara lain untuk liburan/rekreasi, mengunjungi teman, *training*/kursus, pendidikan jangka panjang, kesehatan, kecantikan, keagamaan, belanja, dan tujuan pribadi lainnya. Sementara itu, maksud kunjungan yang bersifat bisnis/profesional antara lain untuk rapat/pertemuan, insentif, konvensi/musyawarah/seminar, mengikuti pameran, dan tujuan bisnis lainnya.

Determinan Pengeluaran Wisatawan Mancanegara

Analisis regresi logistik biner digunakan untuk menganalisis karakteristik yang menjadi determinan pengeluaran wisatawan mancanegara di Indonesia pada tahun 2022. Estimasi model regresi logistik biner terdapat pada Tabel 5.2.

Hasil analisis menyimpulkan bahwa wisatawan mancanegara yang berusia 55 tahun ke atas berpeluang 1,24 kali lebih besar untuk memiliki pengeluaran tinggi dibandingkan dengan yang berusia kurang dari atau sama dengan 34 tahun. Wisatawan mancanegara pada usia tersebut paling banyak melakukan pengeluaran untuk membayar akomodasi, makan minum, belanja, dan paket wisata lokal. Hasil ini sejalan dengan yang disimpulkan oleh Sanchez, Rubio, dan Collado (2013) yang menyatakan bahwa wisatawan mancanegara yang berusia 44 tahun ke atas menghabiskan pengeluaran per hari yang lebih tinggi dibandingkan dengan usia lainnya.

Sementara itu, wisatawan mancanegara perempuan memiliki peluang 1,33 kali lebih besar untuk membelanjakan pengeluaran yang tinggi dibandingkan dengan wisatawan mancanegara laki-laki. Wisatawan mancanegara perempuan tersebut paling banyak membelanjakan uangnya untuk membayar akomodasi, makan minum, belanja, dan penerbangan domestik di dalam Indonesia. Hasil yang sejalan diperoleh dari penelitian Craggs dan Schofiled (2009) yang menyatakan bahwa wisatawan mancanegara perempuan yang mengunjungi The Quays, Salford, Inggris, cenderung menghabiskan lebih banyak pengeluaran dibandingkan dengan laki-laki.

Kebangsaan turut menentukan tingkat pengeluaran wisatawan mancanegara. Wisatawan mancanegara yang berasal dari wilayah non-Asia berpotensi 1,93 kali lebih besar sementara yang berasal dari wilayah Asia (non-Asean) berpotensi 1,29 kali lebih besar untuk memiliki pengeluaran tinggi dibandingkan dengan yang berasal dari wilayah Asean. Uang yang dibelanjakan oleh wisatawan mancanegara dari luar Asia tersebut mayoritas digunakan untuk membayar akomodasi, makan minum, belanja, dan penerbangan domestik di dalam Indonesia.

https://www.bps.go.id

Dari sisi pekerjaan utama wisatawan mancanegara, mereka yang bekerja sebagai manajer bisnis/eksekutif berpeluang 1,53 kali lebih besar sementara yang bekerja sebagai profesional berpeluang 1,41 lebih besar untuk memiliki pengeluaran yang tinggi dibandingkan dengan pekerjaan di bidang lainnya. Selain itu, wisatawan mancanegara yang berstatus sebagai pelajar berpeluang 1,19 kali lebih besar untuk memiliki pengeluaran yang tinggi dibandingkan dengan pekerjaan di bidang lainnya. Wisatawan mancanegara yang berprofesi sebagai manajer memberikan kontribusi tinggi terhadap pengeluaran wisatawan mancanegara per hari (Rahmiati, 2020).

Wisatawan mancanegara yang datang ke Indonesia untuk keperluan pribadi memiliki kecenderungan 2,66 kali lebih besar untuk berpengeluaran tinggi dibandingkan dengan wisatawan mancanegara yang datang untuk keperluan bisnis/profesional. Penelitian lain menyimpulkan hasil yang sejalan yaitu wisatawan mancanegara yang datang untuk keperluan yang bersifat pribadi (rekreasi, hiburan, dan belanja) menghabiskan pengeluaran yang lebih banyak dibandingkan yang datang untuk keperluan bisnis/profesional (Park, Woo, dan Nicolau, 2019).

Berdasarkan jenis akomodasi utama yang digunakan, wisatawan mancanegara yang menginap di hotel bintang berpeluang 6,46 kali lebih besar untuk memiliki pengeluaran tinggi dibandingkan dengan yang menginap di akomodasi nonkomersial (rumah saudara/teman/lainnya). Selain itu, wisatawan mancanegara yang menginap di hotel nonbintang juga berpeluang 4,09 kali lebih tinggi untuk memiliki pengeluaran tinggi dibandingkan dengan yang menginap di akomodasi nonkomersial. Wisatawan mancanegara yang menginap di akomodasi nonkomersial (milik sendiri dan rumah keluarga/teman) memiliki pengeluaran per hari yang jauh lebih rendah dibandingkan dengan yang menginap di hotel (Sanchez, Rubio, dan Collado, 2013). Sejalan dengan tingginya tarif hotel, wisatawan mancanegara yang menginap di hotel berpeluang lebih tinggi untuk memiliki total pengeluaran di atas rata-rata dibandingkan dengan yang tidak menggunakan akomodasi (Agustina dkk, 2022).

Sementara itu, wisatawan mancanegara yang mengunjungi Indonesia paling lama 12 malam dalam satu kali kunjungan berpotensi 5,55 kali lebih besar untuk memiliki pengeluaran tinggi dibandingkan dengan yang berkunjung lebih dari 12 malam. Semakin lama wisatawan mancanegara tinggal di Indonesia, pengeluaran per hari semakin kecil (Jurdana dan Frleta, 2020), namun besaran pengurangan pengeluaran per hari semakin mengecil seiring bertambahnya lama tinggal (Sanchez, Rubio, dan Collado, 2013).

Hasil tersebut dapat digunakan sebagai bahan pertimbangan dalam perumusan kebijakan pada sektor pariwisata di Indonesia. Kebijakan terkait peningkatan devisa negara melalui pengeluaran pariwisata seyogyanya memperhatikan determinan penentu pengeluaran pariwisata.

Catatan Teknis

Metode Pengumpulan Data

Data yang disajikan dalam publikasi ini terdiri atas rata-rata lama kunjungan, karakteristik wisatawan mancanegara, dan pengeluaran wisatawan mancanegara yang diperoleh melalui kegiatan *Passenger Exit Survey* (PES) 2022. Pengumpulan data PES 2022 dilakukan melalui wawancara langsung terhadap responden menggunakan *Computer Assisted Personal Interviewing* (CAPI). CAPI adalah teknik wawancara dimana petugas pencacah atau pewawancara menggunakan alat bantu *smartphone* atau *tablet*, yang bisa digunakan untuk menjawab pertanyaan-pertanyaan yang ada dalam kuesioner.

Pengumpulan data dengan menggunakan CAPI memiliki banyak keunggulan, diantaranya meminimalisasi biaya yang dikeluarkan akibat penggunaan kertas, pensil, penghapus, dan alat-alat manual lainnya. Waktu yang dibutuhkan juga lebih cepat karena data di lapangan bisa langsung tersimpan dalam bentuk softcopy dan dapat segera digabungkan untuk pengolahan.

Pengumpulan data untuk kegiatan PES 2022 dilakukan di pintu keberangkatan internasional bandar udara/pelabuhan/Pos Lintas Batas yang terletak di lima belas provinsi di Indonesia. Wawancara dilakukan pada saat responden akan meninggalkan wilayah Indonesia melalui pintu udara, laut, dan darat (pintu keberangkatan internasional). Pengumpulan data dilakukan setiap bulan selama tahun 2022.

Penimbang

Pengumpulan data PES 2022 dilakukan secara *non-probability sampling* yaitu dengan memberikan kuota untuk setiap kebangsaan wisatawan mancanegara menurut lokasi survei (*quota sampling*). Sebuah alternatif untuk melakukan estimasi pada sampel *non-probability* adalah dengan membangun sebuah model terhadap variabel analitik pada suatu survei dan menggunakan model tersebut untuk memproyeksikan *full* populasi (Valliant et al, 2018). Metode yang diterapkan adalah dengan *superpopulation model*, yaitu menggunakan suatu model untuk memprediksi unit-unit yang tidak terpilih sampel. Dengan penimbang untuk unit ke-i dapat

https://www.bps.go.id

dinyatakan dalam persamaan berikut:

$$w = 1 + t_{\bar{sx}}^{T} A_s^{-1} x_i$$

Keterangan:

w = penimbang untuk unit ke-i

$t_{\bar{sx}}^{T}$ = *vector total auxiliary variable* x untuk unit non-sampel

$A_s^{-1} = A_s^T X_s$ dimana x adalah matriks kovariat $n \times p$ dari n unit yang disampel

Data populasi PES 2022 yang digunakan adalah populasi kedatangan wisatawan mancanegara yang bersumber dari Dirjen Imigrasi Kementerian Hukum dan HAM tahun 2022. Selain itu, *auxiliary variable* yang digunakan adalah jumlah wisatawan mancanegara menurut kebangsaan yang juga berasal dari Dirjen Imigrasi Kementerian Hukum dan HAM.

Setelah menghitung penimbang, dilakukan estimasi untuk rata-rata pengeluaran wisatawan mancanegara. Rata-rata pengeluaran wisatawan mancanegara tersebut dihitung menggunakan rata-rata tertimbang menurut kebangsaan.

https://www.bps.go.id

Responden

Responden dalam survei ini mencakup semua orang yang teridentifikasi sebagai *traveller*, baik wisatawan mancanegara maupun non wisatawan mancanegara, dan akan meninggalkan wilayah Indonesia melalui pintu udara, laut, dan darat. Mekanisme penentuan responden adalah sebagai berikut:

1. Pilih responden yang tempat tinggalnya bukan di Indonesia.
2. Jika responden bekerja untuk mendapat upah di Indonesia, pastikan terlebih dahulu lama tinggal di Indonesia kurang dari 365 malam.

Khusus responden rombongan, dapat dipilih salah satu anggota rombongan yang dianggap mengerti pengeluaran selama perjalanan. Namun, data yang disajikan dalam publikasi ini hanya menyajikan data wisatawan mancanegara.

Covid-19 Pandemic and International Visitors

"Tourism is an important sector for Indonesia, but has suffered a heavy impact due to the Covid-19 pandemic."

Covid-19 is one of the toughest crises perceived by the world. The combination of interconnected health and economic shocks created unprecedented impacts.

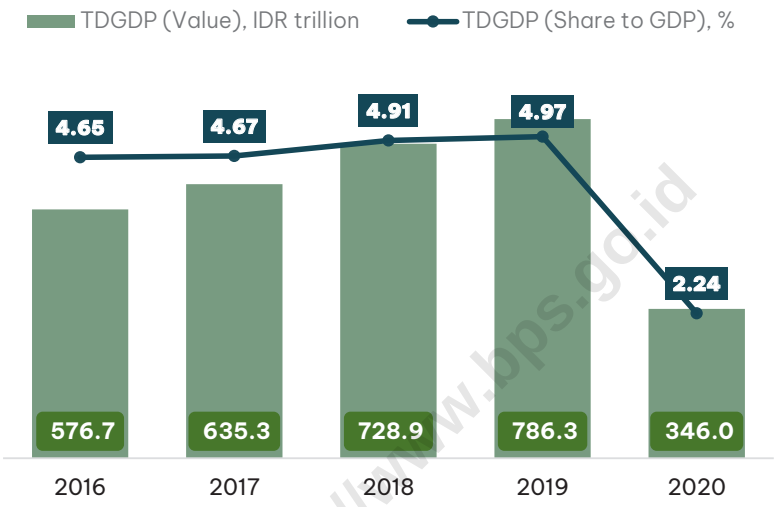

Tourism is a sector that has been hit hard by the Covid-19 pandemic. The policy of closing country's entrances affected the international visitor arrivals, as well as the entire economic chain involved in tourism activities, such as hotels, restaurants, and transportation.

The World Tourism Organization (UNWTO) estimated that the Covid-19 pandemic caused a loss of the world's Gross Domestic Product (GDP) of 1.5 percent to 2.8 percent. Meanwhile, during January-May 2020, there had been a drastic decrease in the number of international visitors by 56 percent, and reduced tourism export revenues of up to USD 320 million. In addition, Covid-19 threatened the loss of 100 to 120 million jobs directly related to tourism. As is known, the tourism sector is mostly labor-intensive based and small and medium scale business activities.

Archipelagic countries and developing countries that rely on the tourism sector to support their economies were expected to have the biggest impacts due to the Covid-19 pandemic. In Indonesia, tourism is a sector that has a very important role, therefore the Covid-19 pandemic has given a significant impact on the Indonesian economy as a whole.

This condition is reflected in the Tourism Direct Gross Domestic Product (TDGDP) which describes the economic value of tourism. Before the pandemic occurred, namely in 2019, it was recorded that Indonesia's TDGDP was IDR 786.3 trillion or contributed 4.97 percent of Indonesia's GDP. However, in 2020, the Covid-19 pandemic caused the drop of TDGDP to IDR 346.02 trillion, and its contribution to GDP fell to 2.24 percent.

Figure 1.1. Value and Contribution of the Tourism Sector to Indonesia's GDP, 2016-2020

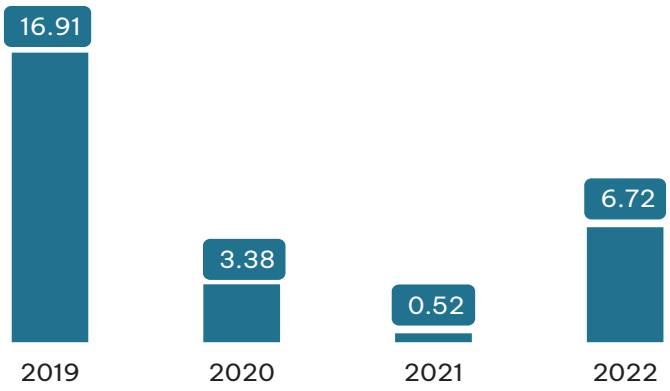

Source *Tourism Satellite Account* 2016-2020, BPS-Statistics Indonesia

https://www.bps.go.id

Another loss can be seen from the foreign exchange side of the tourism sector which has been the top three contributors to Indonesia's foreign exchange apart from crude palm oil (CPO) and coal. According to data from Bank Indonesia, the tourism sector's foreign exchange in 2019 reached USD 16.91 billion. However, the Covid-19 pandemic in 2020 resulted in a drastic drop in this sector's foreign exchange to USD 3.38 billion. The emergence of a new variant of Covid-19 in 2021 also worsened the condition of tourism so that foreign exchange at that time was recorded at only USD 0.52 billion. As the Covid-19 situation improves, such as widening vaccination coverage, opening country's entrances, and easing travel policies, pushed back tourism activities and generated foreign exchange of USD 6.72 billion in 2022, or recovered 39.74 percent compared to conditions in 2019.

International Visitors Policy during the Covid-19 Recovery Period

"The government's efforts to recover international visitors are considered quite successful with performance in December 2022 reaching almost 70 percent compared to the same month before the pandemic."

International visitors are an important part of Indonesian tourism because of their ability to boost the economy through creating jobs, developing local tourism, and as a media of promoting Indonesian culture. Before the pandemic hit, international visitors entering Indonesia reached 16.11 million visits in 2019. Entering 2020, international visitors dropped drastically by 74.84 percent to 4.05 million visits. The worsening pandemic conditions had resulted in a reduction in international visitors up to 1.56 million visits in 2021.

However, 2022 showed signs of recovery for international visitors, in line with the improvement in the pandemic conditions and increasing confidence in Indonesia's health safety. In this year, there were 5.89 million international visitors, an increase of 278.10 percent compared to the previous year. Even though it has not fully returned to pre-pandemic conditions, this provides optimism for tourism going forward.

Figure 1.3. Trend of International Visitors, 2017-2022

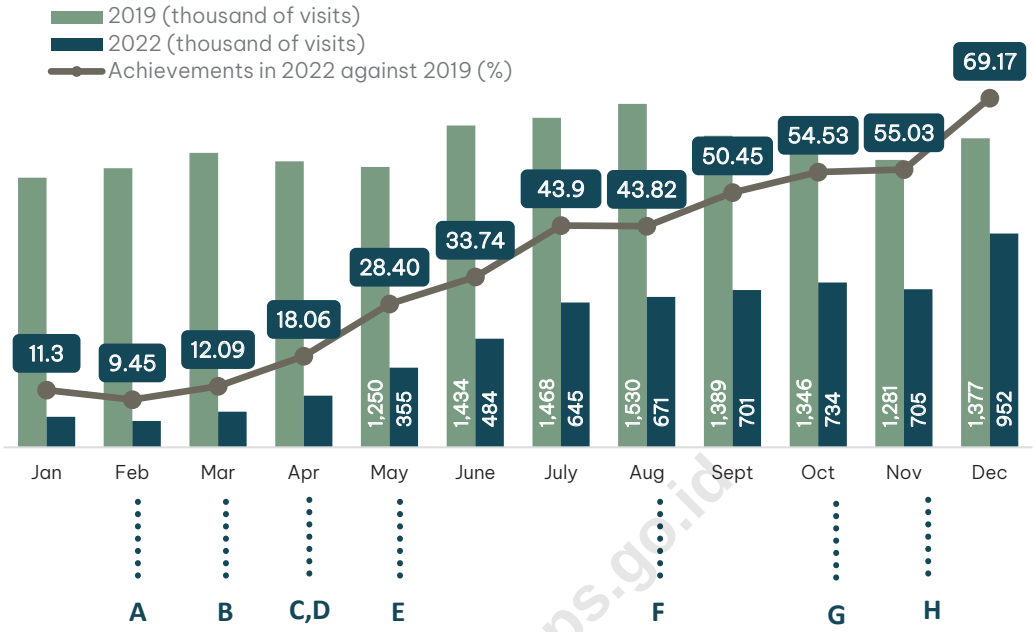

Source: - Ministry of Law and Human Rights (Directorate General of Immigration)
- Ministry of Tourism and Creative Economy, Mobile Positioning Data

https://www.bps.go.id

During 2022, various policies had been implemented by the Indonesian government in order to increase the contribution of international visitors, considering the current situation of the development of Covid-19, both at home and abroad. These regulations included the gradual opening of entrances for international visitors, both via air, sea and land. In addition, it was given convenience by implementing a visa-free policy for ASEAN countries, granting Visit Visas on Arrival for Special Tourism and granting Visas on Arrival for Special Tourism in Bali for certain countries.

In more detail, the results of the policies implemented by the government can be seen in the arrival of international visitors which were increasing every month throughout 2022. Compared to before the pandemic, in January 2022 it only reached 11.34 percent of the 2019 condition. Over time, it continued to improve especially with the holding of the MotoGP international event in Mandalika, West Nusa Tenggara Province. These events can be an attraction for domestic and international visitors, thus providing a booster for Indonesian tourism. At the end of 2022, in December it was recorded that international visitors had almost reached 70 percent of their performance in the same month before the 2019 pandemic. This is a positive signal for the revival of tourism, especially international visitors in 2023

Future Target of International Visitors

"Year 2022 revealed signs of recovery in international visitors, even though it has not yet met the government's targeted value."

In order to rebuild tourism, the government needs to set targets to measure the progress of the implemented policies. Some of these targets included the value of tourism foreign exchange, the contribution of tourism GDP, the number of international visitor visits, and international visitor expenditure.

In 2020, tourism brought in foreign exchange of USD 3.38 billion and the number of visitors were 4.05 million visits with an average expenditure of USD 2,165.02. These three indicators had reached the value targeted by the government which was adjusted to the Covid-19 pandemic conditions. However, the tourism sector's contribution to GDP in 2020 was still below the target, which was 2.4 percent of the target of 4 percent.

In the following year, in 2021, foreign exchange gains were further away from the target due to the worsening pandemic conditions. Foreign exchange, which was originally targeted to be between USD 4.8-8.5 billion, did not even reach USD 1 billion in 2021. As for 2022, foreign exchange in tourism received by Indonesia increased to USD 6.72 billion. Even though it has not met the target for that year, it has reflected the stretching recovery of international visitors.

In line with tourism foreign exchange, the number of international visitors in 2021 had not been able to reach the target, which was 1.56 million from the expected target of 4-7 million visits. In 2022, the situation was getting better and was able to bring in 5.89 million international visitors. This value has exceeded the government's target of 3.6 million visits. In addition, the average expenditure of international visitors also exceeded the government's targeted value. In 2022, international visitors spent an average of USD 1,448.01 per visit. Although it decreased compared to the previous year, this value exceeded the government's target.

For 2023 and 2024, there is optimism that the government can achieve better tourism development in Indonesia. The target for international visitors in 2023 is 8.5 million visits, while in 2024 there will be 16-17 million visits. This condition is almost the same as before the pandemic in 2019.

Characteristics of International Visitors

illustration: storyset.com

https://www.bps.go.id

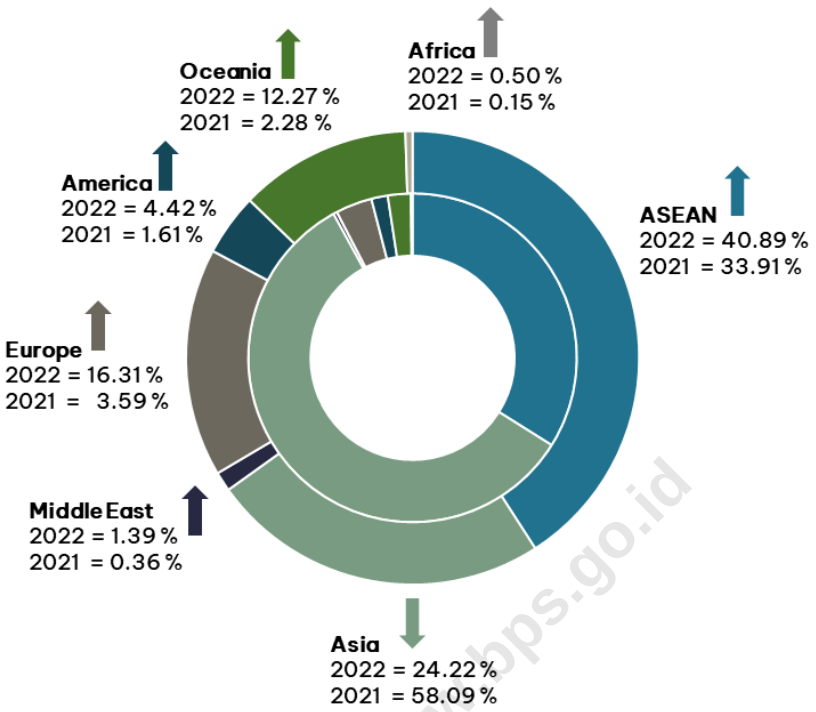

Nationality of International Visitors

"During the pandemic, international visitors were mostly Asian. However, during recovery, the contribution of visitors from other nations had increased."

Indonesia with its attractiveness invites many visitors from all over the world. The nationality of international visitors can be grouped into seven, namely ASEAN, Asia (other than ASEAN), Middle East, Europe, America, Oceania, and Africa. The arrival of visitors from these groups forms a certain pattern. A different pattern can be seen when the pandemic occurred in 2021 and during the recovery period in 2022.

In 2021, more than fifty percent of international visitors were Asian (other than ASEAN countries). In the following year, Asian visitors decreased to 24.22 percent of all visitors in 2022. In contrast to these conditions, the arrival of international visitors from ASEAN, Middle East, Europe, America, Oceania and Africa had increased, reflecting the rising number of international visitors to Indonesia from other parts of the world. For example, the European group which was previously only 3.59 percent in 2021 increased to 16.31 percent in 2022. This can also be seen in the American group, which was originally 1.61 percent, improved to 4.42 percent.

■ Performance in 2022 against 2019

Efforts to encourage Indonesian tourism continued to be carried out in stages, including encouraging the arrival of international visitors. The number of international visitors in 2022 was recorded at 5.89 million people. The 2022 performance implied that this condition has reached 36.56 percent from before the 2019 pandemic, or 63.44 percent remains to equal conditions in 2019. Even so, this can be a positive signal for the following years.

Based on nationality, the fastest recovered group was European visitors with 960,410 visits or needed 55.32 percent to reach 2019 conditions. Oceania and America were also the group with the fastest recovery rate, which respectively required 55.32 percent and 59.92 percent more to reach the 2019 state. Meanwhile, the slowest recovery was seen in Asian visitors, where conditions for 2019 will only be reached when the visits of Asians increase by 72.80 percent.

Figure 2.2. Recovery Progress of International Visitors by Nationality, 2022

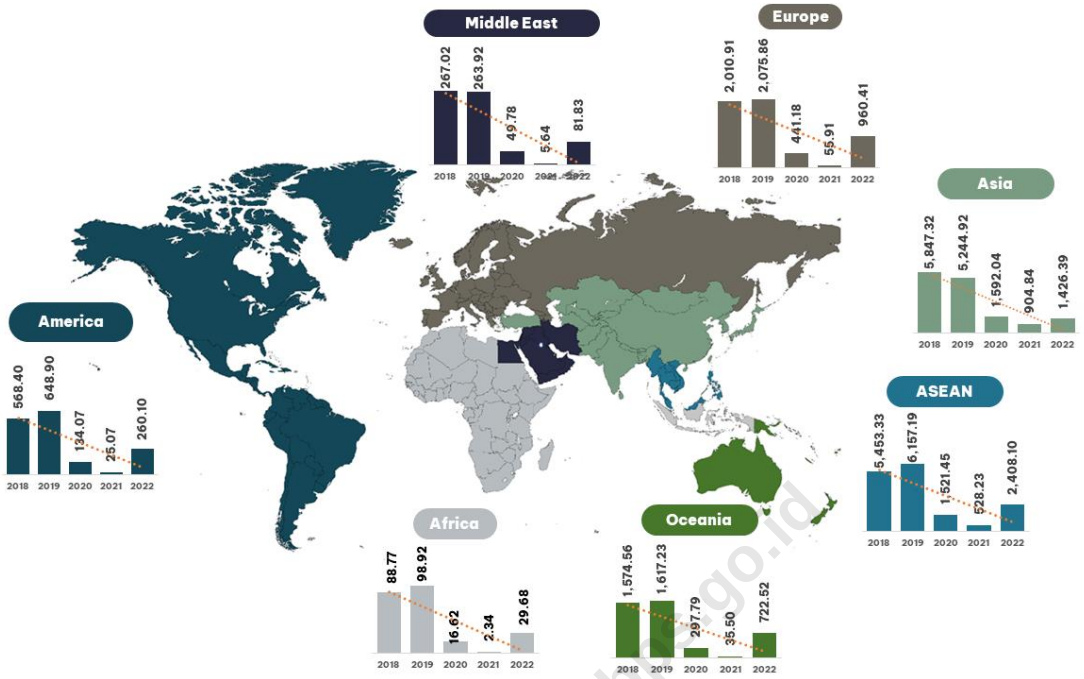

Source: - Ministry of Law and Human Rights (Directorate General of Immigration)
- Ministry of Tourism and Creative Economy, Mobile Positioning Data

https://www.bps.go.id

■ International Visitor Trends

During 2018 to 2022, the trend of international visitors from ASEAN, Asia (other than ASEAN), the Middle East, Europe, America, Oceania and Africa reveals a similar pattern. Before Covid-19, namely in 2018 and 2019, the number of visitors coming to Indonesia was quite high. The start of Covid-19 in 2020 made this trend sloping and at its lowest point occurred in 2021. During the recovery period in 2022, international visitors returned to Indonesia and this condition occurred in all national groups.

Figure 2.3. Trend of International Visitors by Nationality (Thousand of Visits), 2018-2022

Source: - Ministry of Law and Human Rights (Directorate General of Immigration)
- Ministry of Tourism and Creative Economy, Mobile Positioning Data

https://www.bps.go.id

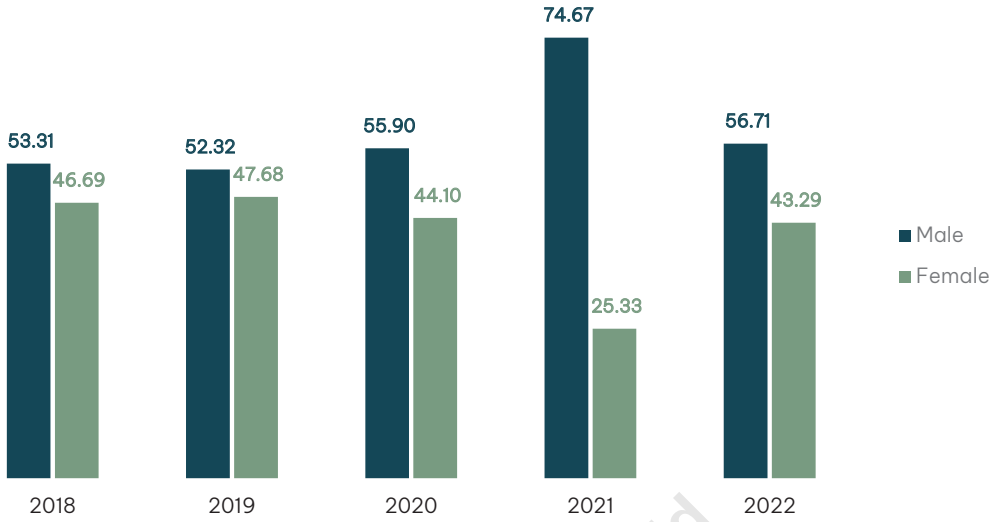

Gender of International Visitors

"In 2022, male visitors were more than female visitors"

In the last five years, more male visitors had come to Indonesia than females. This pattern became clearer when the Covid-19 pandemic occurred. In 2019, male visitors were recorded at 52.32 percent, then increased in 2020 and 2021 to 55.90 percent and 74.67 percent respectively. During the recovery period in 2022, the conditions returned to the pre-covid-19 period, namely international visitors consisting of 56.71 percent male and 43.29 percent female.

Based on the nationality, male visitors also seem to dominate in all groups. The Middle East was the group with the highest male visitor, namely 65.94 percent in 2022.

- Ministry of Tourism and Creative Economy, Mobile Positioning Data

Age of International Visitors

"In 2022, the majority of visitors were young people between the 25-34 year and 35-44 year group."

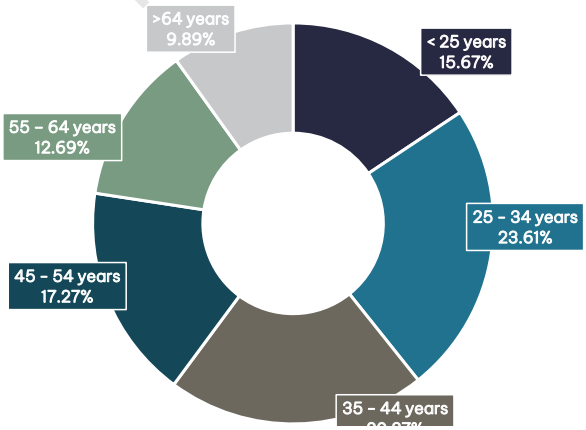

Overseas travel is different from domestic travel. Traveling abroad requires more mature preparation, both in terms of distance, health, physical strength, costs, as well as the completeness of the documents that need to be fulfilled to enter the territory of another country. These various factors can influence a person's decision at a certain age to travel abroad.

This is reflected in international visitors who were dominated by young age groups. In 2022, international visitors comprised 23.61 percent of the 25-34 year age group and 20.87 percent of the 35-44 year age group. On the other hand, the age group under 25 years including children who came to Indonesia by 15.67 percent and over 64 years by 9.89 percent.This condition implies that there are limitations for people in this age group to travel.

A similar pattern can also be seen in most nationality groups where the most international visitor aged 25-34 years came to Indonesia, and visitors aged more than 54 years were the least visiting. However, in the Oceania group, things appeared to be different, that visitors aged over 54 years were quite high, even exceeding visitors in the 25-34 year age group.

Occupation of International Visitors

"International visitors in 2022 mostly worked as professionals and managers"

International visitors who came to Indonesia had diverse occupations. In 2022, most visitors had the main occupation in the professional field, which was 38.54 percent. These professional fields included scientific and technical, health, education, business and administration, technology, and legal, social, and cultural experts. The second highest was visitors who worked as managers at 22.18 percent. These two types of occupation are closely related to foreign travel, such as conducting Meetings, Incentives, Conventions, and Exhibitions (MICE). Furthermore, visitors who worked as government officers and employees amounted to 15.49 percent. As for visitors with student status was 11.06 percent and other jobs were 12.73 percent.

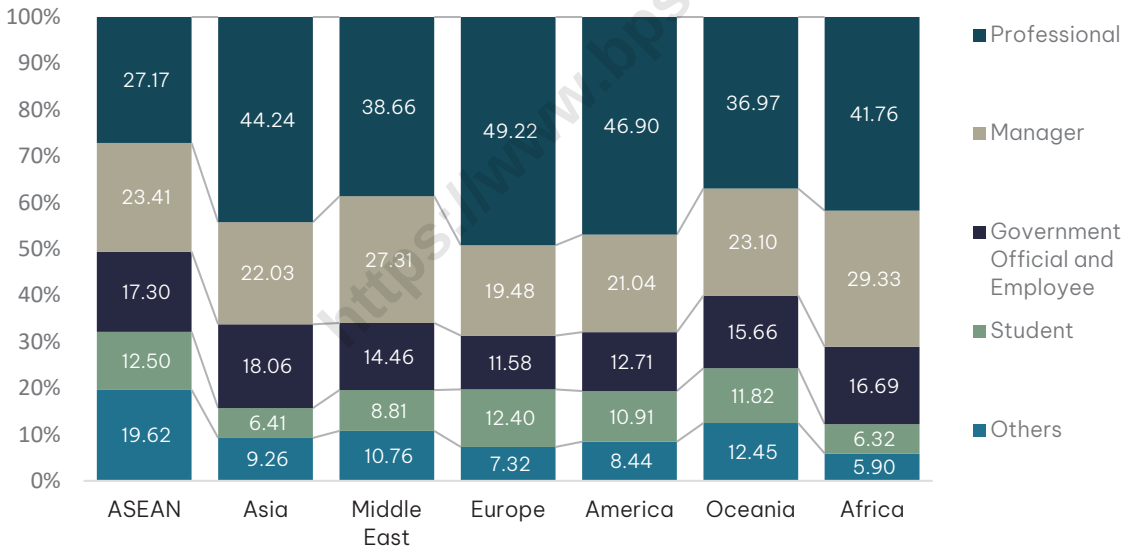

In each national group, it can be seen that the pattern of international visitors with the main job as a professional was the highest compared to other types of work. Nearly half of European visitors had a main job as a professional. This proportion was the highest compared to other national groups. Meanwhile, the highest percentage of visitors with the main occupation as a manager was African, which was 29.33 percent.

Figure 2.8. International Visitors by Main Occupation (%), 2022

Source: Passenger Exit Survey 2022, BPS-Statistics Indonesia

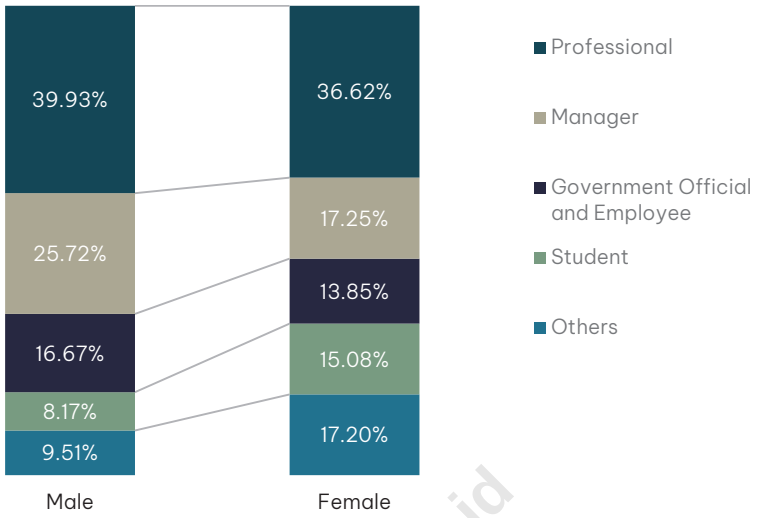

Figure 2.9. International Visitors by Main Occupation and Nationality (%), 2022

Source: Passenger Exit Survey 2022, BPS-Statistics Indonesia

In the male group, the visitors with the main occupation as professional were the most compared to other occupations at 39.93 percent, while the least were male visitors with student status at 8.17 percent. In the female group, visitors who worked as professionals were also the highest at 36.62 percent. However, in this group, the least number of visitors working in government and employees was 13.85 percent.

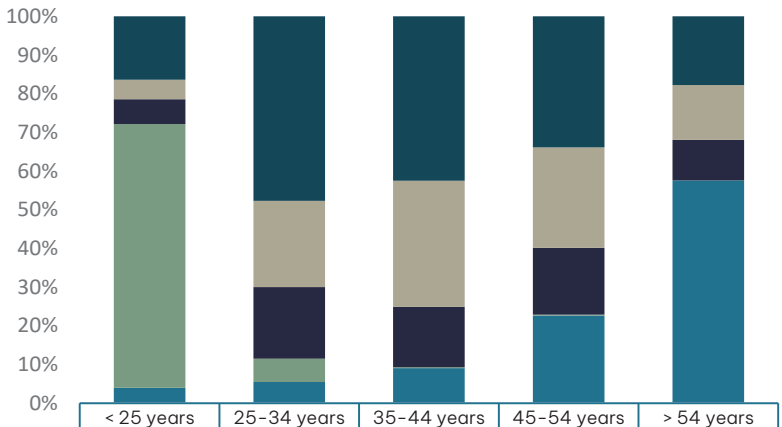

Figure 2.10. Figure 2.10. International Visitors by Main Occupation and Gender (%), 2022

Source: Passenger Exit Survey 2022, BPS-Statistics Indonesia

Based on age group, visitors with age less than 25 years were mostly students. In the age group 25-34 years and 35-44 years, the majority of visitors worked as professionals, managers, government employees and employees. For visitors in the 45-54 years, the occupations were relatively varied, namely working as professionals, managers and other occupations. Meanwhile, in the age group over 54 years, more than half of visitors had other types of work.

Purpose of Visit of International Visitors

"The majority of international visitors came to Indonesia for vacation in 2022. European visitors had the highest tendency to take a vacation compared to other nations"

The Covid-19 pandemic for about two years has limited everyone's activities. As the Covid-19 case slumps, it encourages people to travel, one of which is on vacation. 72.80 percent of international visitors in 2022 came to Indonesia for vacation. The remaining 17.10 percent came for other personal purposes, such as visiting friends or relatives, shopping, seeking treatment, and so on. Meanwhile, 10.10 percent of international visitors came for business purposes.

Figure 3.1. International Visitors by Main Purpose of Visit (%), 2022

Source: Passenger Exit Survey 2022, BPS-Statistics Indonesia

In general, the same pattern was seen in almost all nationalities, with the majority of visitors in each nation visiting Indonesia for vacation, followed by other personal purposes, and lastly for business. Only African visitors who had business as their main purpose were higher than other personal purpose.

Furthermore, the highest number of visitors intending to take a vacation was from the European group. As much as 86.58 percent of all European visitors came for vacation in Indonesia. The ASEAN group was the lowest in terms of vacation, namely 62.32 percent. On the other hand, the ASEAN had the highest tendency of other personal purposes at 26.54 percent. While the Asian (other than ASEAN) was the highest in terms of business purposes, namely 16.38 percent.

https://www.bps.go.id

Figure 3.2. International Visitors by Main Purpose of Visit and Nationality (%), 2022

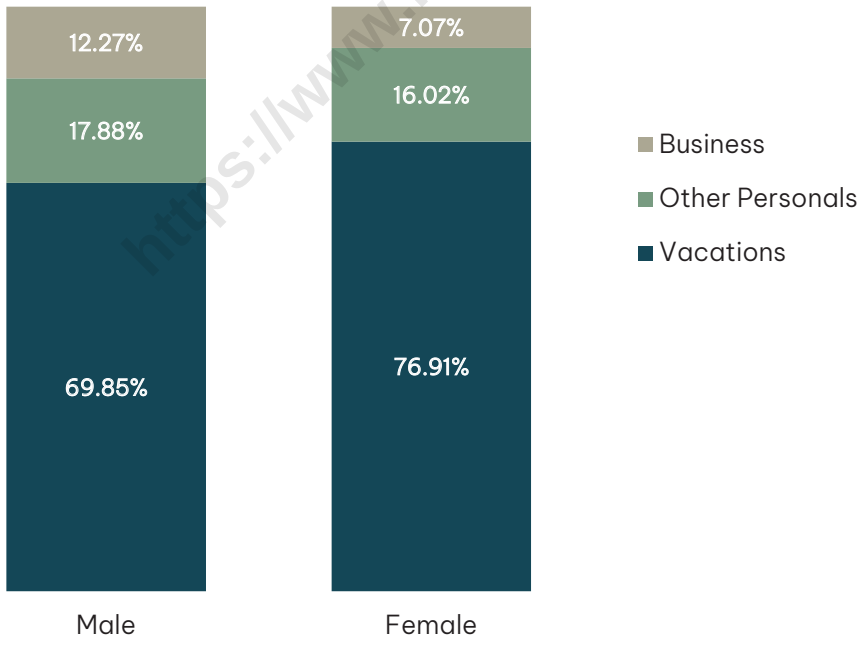

Sorce: Passenger Exit Survey 2022, BPS-Statistics Indonesia

According to gender, the majority of main purpose, both male and female who visited Indonesia were for vacation, then later for other personal, and at least for business. When compared, higher vacation was carried out by group of female than male. Of all female visitors in 2022, 76.91 percent of them came for vacation, while in the group of male visitors there were 69.85. On the other hand, the highest number of visits for personal and business purposes were carried out by male visitors.

As for the age group, most of the visitors in various groups were on vacation. Visitors in the age range of 25-34 years had the highest tendency to take vacations compared to other age groups, which was 78.89 percent. Furthermore, visits for business purposes tended to be made by visitors aged 35-44 years. Meanwhile, visits with other personal purposes tended to be made by visitors aged over 54 years.

Favorite Destination of International Visitors

"Bali was still a favorite destination for international visitors coming to Indonesia."

In 2022, the majority of international visitors coming to Indonesia preferred Bali as a destination which reached 46.72 percent of all international visitors. Of these visitors, the European and Oceanian dominated the visits to Bali, respectively 32.01 percent and 24.40 percent.

Furthermore, DKI Jakarta province was the second favorite destination for international visitors with a percentage of visitors of 13.03 percent. As it is known that DKI Jakarta is the center of government as well as a business center which provides a special attraction for international visitors. The province as the third highest destination for visits was the Riau Islands with a percentage of 11.81 percent. Other provinces with percentage of more than two percent for international visitors destinations included West Nusa Tenggara, East Java, West Java, DI Yogyakarta, and Riau.

Duration of Visit of International Visitors

"Travelers from the Middle East had the longest average duration of visit in Indonesia"

The duration of visit for international visitors in Indonesia was 14.32, which means that on average an international visitors stayed in Indonesia for 14 to 15 nights in 2022. Middle Easterners were visitors with the longest stay in Indonesia, namely 19 to 20 nights. On the other hand, visitors from ASEAN countries had the shortest duration when visiting Indonesia, namely 9 to 10 nights. In addition, based on gender and age group, male visitors aged 35-44 years had the longest average duration of visit in Indonesia, which was 16 to 17 nights.

Accommodation for International Visitors

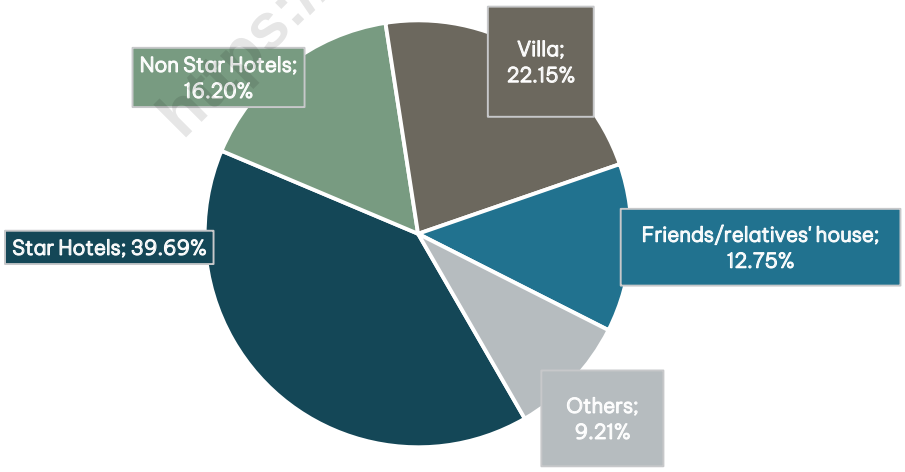

"Star hotel was most in demand by international visitors. Meanwhile, villa was prefered by visitors rather than non-star hotel."

Accommodation services are one of the supporters of tourism activities. Especially in terms of international visitors who need a place to stay while in Indonesia. The arrival of international visitors will empower accommodation businesses around tourist sites.

In 2022, the majority of international visitors preferred star hotels as their main accommodation while staying in Indonesia, which was 39.69 percent. Accommodations in the form of villas were also in great demand by international visitors with a percentage of 22.15 percent. In third place, non star hotels were the choice for international visitors at 16.20 percent. Meanwhile, the choice of accommodation to stay at a friend's or family's houses were also quite high at 12.75 percent.

https://www.bps.go.id

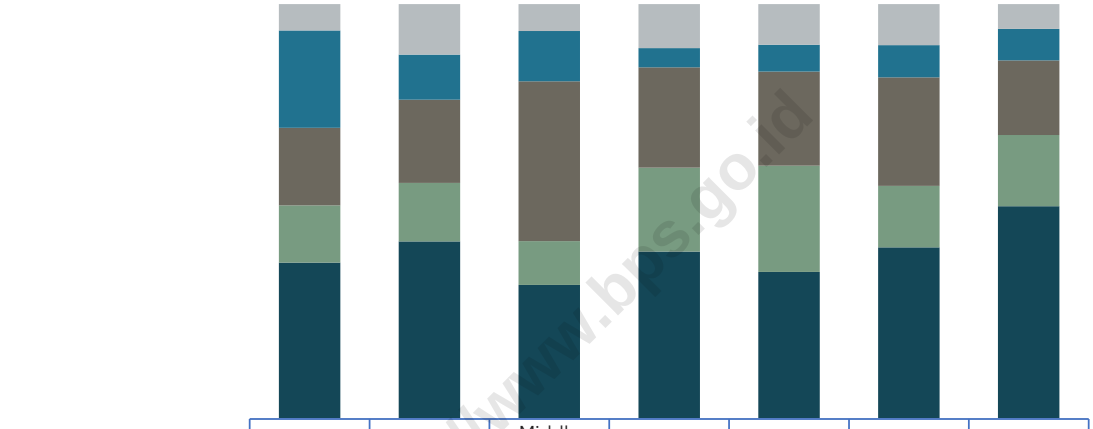

Figure 3.9. International Visitors by Main Accommodation (%), 2022

Source : Passenger Exit Survey 2022, BPS-Statistics Indonesia

In each nationality group, the majority of visitors preferred star hotels as the main accommodation, except for visitors from the Middle East. In 2022, 38.51 percent of Middle Eastern visitors had villas as the main accommodation, while 32.30 percent of visitors had the star hotels. The tendency to stay in non-star hotels was found in the American group, which was 25.62 percent. On the other hand, visitors from ASEAN countries had the highest tendency to stay at friends/relatives' houses compared to other nations, with a percentage of 23.47 percent.

International Visitors Expenditure

illustration: storyset.com

https://www.bps.go.id

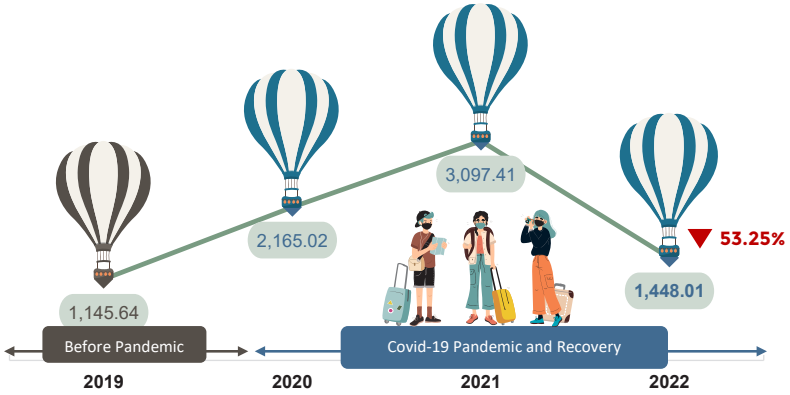

Average Expenditure of International Visitors

"The average expenditure of international visitors in 2022 decreased by 53.25 percent"

While visiting Indonesia, the average expenditure of international visitors decreased by 53.25 percent compared to 2021, from 3,097.41 US dollars to 1,448.01 US dollars. Nevertheless, the average expenditure international visitors in 2022 was still higher than the average expenditure international visitors in 2019 (before the Covid-19 pandemic), which reached 1,145.64 US dollars.

The decline in the average expenditure of international visitors in 2022 is mainly due to

Figure 4.1. Average International Visitors Expenditure per Visit, 2019-2022 (US$)

Source: *Passenger Exit Survey* 2019 - 2022, BPS-Statistics Indonesia

the reduction in the duration of visit of international visitors. The gradual opening and easing of access for international visitors had reduced the duration of visit of international visitors. Since the beginning of 2022, there had been a reduction in the quarantine period to 7 days, although the mandatory PCR requirement and the Insurance requirement with a coverage value of 100,000 US dollars still apply. Then in February 2022, the government cut the quarantine time for international visitors who had received a complete dose of vaccine, the PCR test mandatory no longer had to wait for the 6th day, and the insurance coverage value dropped to 25,000 US dollars. In addition, during this period, the entry points for international visitors were expanded to include seven airports, five seaports, and three cross-border posts (previously only in Soekarno-Hatta and I Gusti Ngurah Rai Airports).

A significant relaxation was made since the beginning of March 2022 with the implementation of quarantine-free trials in Bali and Riau Islands Provinces. On March 23, 2022, a widespread quarantine exemption was officially implemented for international visitors who have received a full dose of the vaccine. Mandatory insurance requirements were also regulated by the managers or local governments of each tourist destination. Until the end of December 2022, the entry points for international visitors had been set to be 16 airports, all international seaports, and 8 Cross Border Posts. In addition, there are no more pre-departure and arrival test requirements, except for those with symptoms, and no more mandatory insurance requirements. Various forms of opening and easing access for international visitors throughout 2022 had led to a decrease in the average expenditure of international visitors per visit.

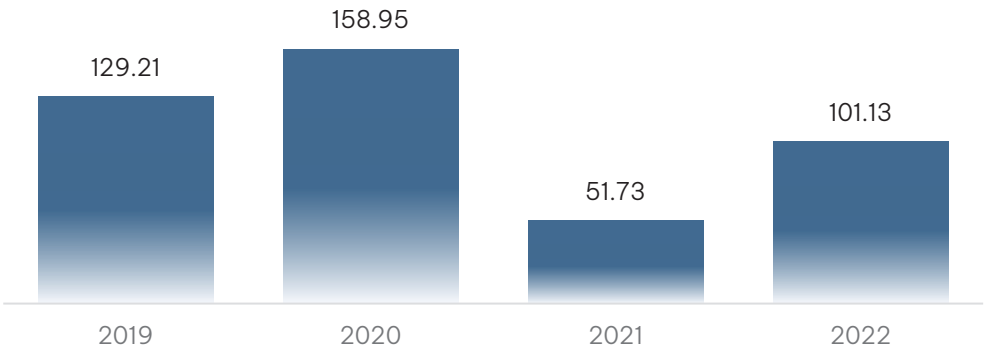

https://www.bps.go.id

Average International visitors Expenditure per Night

"In contrast to the average expenditure of international visitors per visit, the average expenditure of international visitors per night in 2022 increased by 95.50 percent"

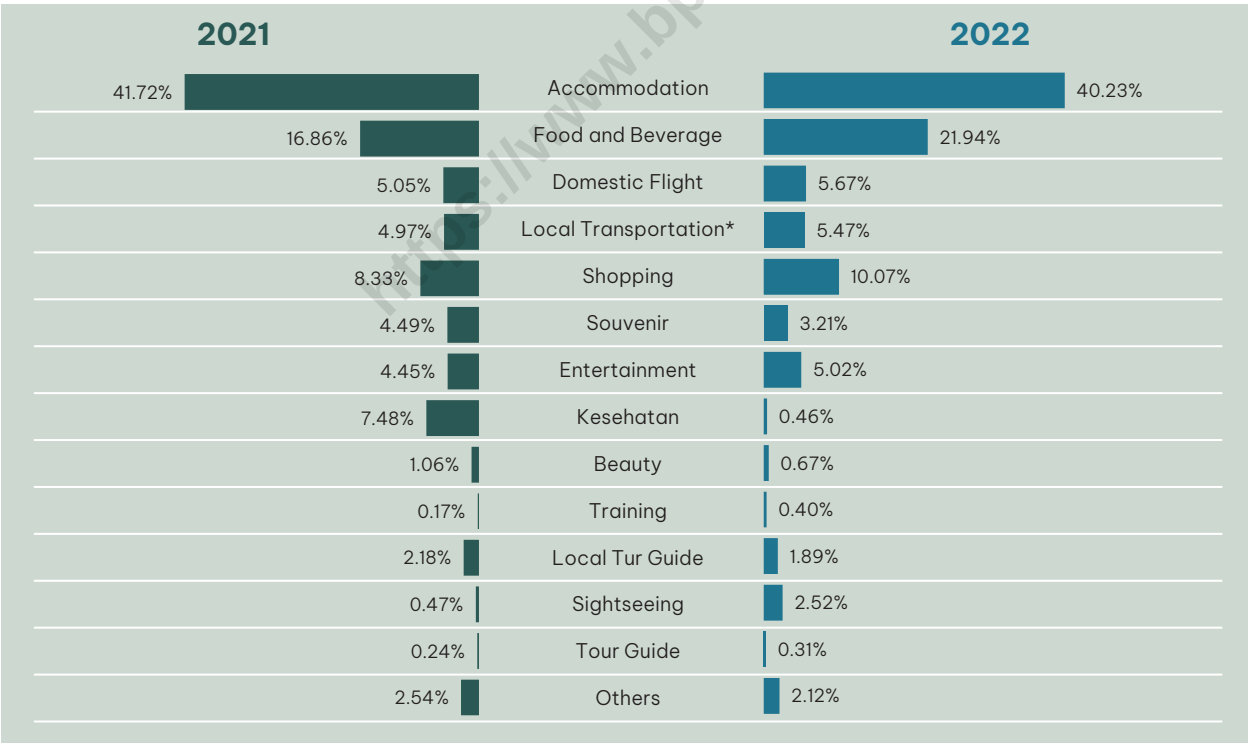

In contrast to the average expenditure of international visitors per visit, which had decreased, the average expenditure of international visitors per night in 2022 delivered a significant increase. In 2022 the average expenditure of international visitors per night reached 101.13 US dollars, an increase of 95.50 percent compared to 2021. One of the factors that increase the average expenditure of international visitors per night was the elimination of quarantine policies for international visitors, which will be carried out gradually in 2022. The elimination of the policy made the average duration of visit of international visitors in 2022 drop dramatically from the previous year's 59.88 nights to only 14.32 nights. This makes the average expenditure of international visitors per night in 2022 increase sharply.

Figure 4.2. Average International Visitors Expenditure per Night, 2019-2022 (US$)

Notes: *Value of Local Transportation is a composite of Local Transportation plus vehicle rental.

Distribution of International visitors Expenditure

"The distribution of international visitors expenditure in 2022 used for health purposes experienced the deepest decline of 7.02 points"

Based on the type of expenditure, most of the expenditure of international visitors in Indonesia in 2022 was used for accommodation, reaching 582.57 US dollars or 40.23 percent of the total expenditure of international visitors, followed by expenditure on food and beverages amounting to 317.72 US dollars (21.94 percent). Meanwhile, the smallest international visitors expenditure was used for tour guide purposes, which was only 4.54 US dollars (0.31 percent). The distribution of international visitors expenditure used for food and beverage purposes in 2022 experienced the largest increase, which increased by 5.08 points. On the other hand, the distribution of international visitors expenditure used for health purposes experienced the deepest decline, which fell by 7.02 points to only 0.46 percent. One of the reasons for the decline in health expenditure is that since June 2022, international visitors are no longer required to conduct pre-departure and arrival tests. Not only that, the insurance requirements for international visitors had also been abolished.

https://www.bps.go.id

Average International visitors Expenditure by Main Purpose of Visit

"International visitors with the main purpose of visit on vacation have the highest average expenditure, reaching 1,657.18 US dollars"

When considering the main purpose of visit, the average expenditure of international visitors with the main purpose of visiting on vacation had the largest value, reaching USD 1,657.18. Meanwhile, the average expenditure of international visitors with the main purpose of visiting other personal activities had the lowest value of only 823.61 US dollars.

Figure 4.4. Average International Visitors Expenditure by Main Purpose of Visit, 2022

https://www.bps.go.id

Average International Visitors Expenditure by Nationality

"International visitors from Austria have the largest average expenditure, reaching USD 2,767.82. Meanwhile, international visitors from Malaysia have the smallest average expenditure, only 669.41 US dollars"

In terms of nationality, the largest average expenditure per visit came from Austria, amounting to 2,767.82 US dollars. Then followed by international visitors from Finland (2,721.26 US dollars), Canada (2,543.70 US dollars), Belgium (2,458.84 US dollars), and Switzerland (2,458.05 US dollars). Meanwhile, the lowest average expenditure came from Malaysia, which only reached 669.41 US dollars, followed by Singapore, which reached $796.59 US dollars.

DETERMINANTS OF INTERNATIONAL VISITORS EXPENDITURE IN INDONESIA

illustration: storyset.com

The Covid-19 pandemic that has hit Indonesia since the beginning of 2020 has left a historical record of the decline in the tourism industry in Indonesia. Throughout 2020, the number of international visitors to Indonesia was only about 25 percent from 2019 (Kemenparekraf, 2020). The implementation of large-scale social restriction policies and the closure of Indonesian access in and out has had an impact on decreasing state revenue in the tourism sector.

In terms of Gross Domestic Product (GDP) by industrial origin in 2020, the tourism sector became the second-worst sector after the transportation and storage sector (BPS, 2020). However, following the transportation and storage sector, the tourism sector experienced the second-highest GDP increase in 2022 (BPS, 2022). Undoubtedly, this is a sign that Indonesia's tourism sector is starting to recover.

Tourism sector is one of the social and economic development drivers, as well as the largest job creator (WTTC, 2020). The sector has direct impacts (through GDP and employment) as well as indirect impacts (through supply chain linkages with other sectors) on the economy.

In Indonesia, tourism is one of the national economic growth drivers. The tourism sector is expected to increase the number of international visitor arrivals, domestic tourist trips, increase foreign exchange revenues from tourism sector, absorb tourism labor, and increase Indonesia's tourism competitiveness index in the global scope (Agustina et al., 2020). President Joko Widodo reemphasized at a restricted meeting in 2019 that the tourism sector must be a motor for increasing foreign exchange and creating a multiplier effect that drives economic growth.

Characteristics that Influence International Visitors Expenditure

Economic tourism impact of a region determined by tourism expenditure or consumption that occurs in the region (IRTS, 2008). The higher the tourism expenditure made by tourists, the higher the foreign exchange revenues and state revenues from the tourism sector.

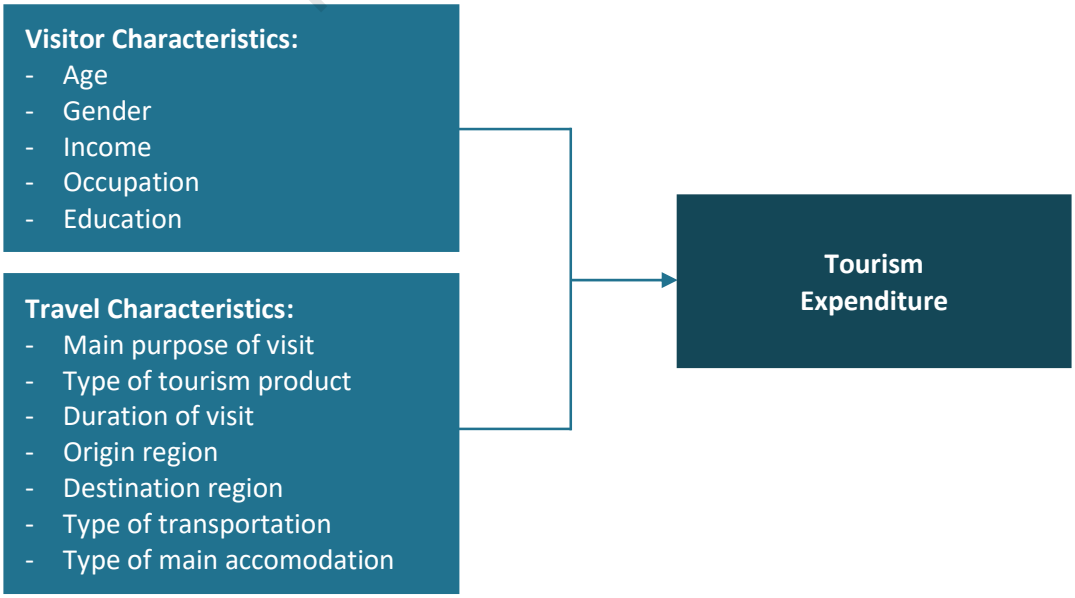

Tourism expenditure refers to the amount paid to acquire consumption goods and services, as well as valuable items, for own use or to give away, for and during tourism trips. It includes expenditure by visitors themselves, as well as expenditure paid or reimbursed by others.

Meanwhile, tourism trips can be classified based on the (socioeconomic) characteristics of visitors and characteristics of the tourism trip itself (IRTS, 2008). In other words, the tourism expenditure pattern of a visitor trip also depends on characteristics of visitors and characteristics of visitor trip.

Visitors characteristics consist of age, gender, income, occupation, and education. Meanwhile, tourist trip characteristics consist of main purpose of visit, type of tourism product, duration of visit, origin region, destination region, type of transportation, and type of main accommodation. The relationship between visitor characteristics and travel characteristics with tourism expenditure presented in Figure 5.1.

https://www.bps.go.id

Figure 5.1. Relationship between Visitor Characteristics and Travel Characteristics with Tourism Expenditure

In this chapter, **tourism expenditure** defined as the total expenditure per day of international visitors (either self-spent or financed by other parties) while visiting Indonesia. Tourism expenditure, hereafter referred to as **international visitors expenditure**, grouped into two categories, namely high (above average) and low (equal to or below average).

The characteristics covered include age, gender, nationality, occupation, main purpose of visit, duration of visit, and type of main accommodation used. Based on all international visitor characteristics visiting Indonesia in 2022, international visitors expenditure in general tends to be in the low category.

Table 5.1. Percentage of International Visitors by Characteristics and Expenditure Category, 2022

Characteristics		Expenditure Category (%)		
		Low	High	Total
(1)	(2)	(3)	(4)	(5)

https://www.bps.go.id

When viewed in more detail in Table 5.1, there are differences in expenditure based on each characteristic of international visitors. International visitors who tend to spend more are female international visitors, young (maximum age 34 years), come from outside the Asian region, work as professionals, visit Indonesia for personal purposes, stay in classified hotels, and the maximum duration of visit is 12 nights.

International visitors who come from outside Asia include visitors from Africa, America, Europe, the Middle East, and Oceania. International visitors who work as professionals include those who work in science and engineering, health, education, business and administration, information and communication technology, law, and social and cultural experts' fields.

Personal purpose of international visitors includes holiday/leisure/recreation, visiting friends/relatives, training/courses, long-term education, health, beauty, religion/pilgrimages, shopping, and other personal purposes. Meanwhile, business/professional purposes of visit include meetings, incentives, conventions/deliberations/seminars, attending exhibitions, and other business purposes.

https://www.bps.go.id

Determinants of International Visitors Expenditure

Binary logistic regression analysis is used to analyze characteristics that determine expenditure of international visitors in Indonesia in 2022. The estimated binary logistic regression model is in Table 5.2.

The analysis concluded that international visitors aged 55 years and above are 1.24 times more likely to have high expenditure than those aged less than or equal to 34 years. International visitors at that age spend the most on accommodation, food and beverages, shopping, and local tour packages. These results are in line with those concluded by Sanchez, Rubio, and Collado (2013) who stated that international visitors aged 44 years and over spend higher per day compared to other ages.

Meanwhile, female international visitors are 1.33 times more likely to have high expenditure compared to male international visitors. Female international visitors spend most money to pay for accommodation, food and beverages, shopping, and domestic flights within Indonesia. Similar results obtained from Craggs and Schofiled's (2009) research which stated that female international visitors visiting The Quays, Salford, England, tend to spend more than male.

Nationality also determines the expenditure level of international visitors. International visitors from non-Asian regions are 1.93 times more likely while those from Asian (non-Asean) regions are 1.29 times more likely to have high expenditure than those from Asean regions. The money spent by international visitors from outside Asia mostly used to pay for accommodation, food and beverages, shopping, and domestic flights within Indonesia.

Table 5.2. Logistic Regression Model Estimation

In terms of international visitors' main occupation, those who work as business managers/ executives are 1.53 times more likely while those who work as professionals are 1.41 times more likely to have high expenditure compared to other occupations. In addition, international visitors who are students are 1.19 times more likely to have high expenditure compared to other occupations. International visitors who work as managers make a high contribution to the expenditure of international visitors per day (Rahmiati, 2020).

https://www.bps.go.id

International visitors who come to Indonesia for personal purposes have a 2.66 times greater tendency to spend high compared to international visitors who come for business/ professional purposes. Another study concluded that international visitors who come for personal purposes (recreation, entertainment, and shopping) spend more than those who come for business/professional purposes (Park, Woo, and Nicolau, 2019).

Based on the type of main accommodation used, international visitors staying in classified hotels are 6.46 times more likely to have high expenditure compared to those staying in non-commercial accommodation (relatives/friends/others). In addition, international visitors staying in non-classified hotels are also 4.09 times more likely to have high expenditure compared to those staying in non-commercial accommodation. International visitors staying in non-commercial accommodation (owned and family/friends' houses) have a much lower expenditure per day compared to those staying in hotels (Sanchez, Rubio, and Collado, 2013). In line with the high hotel rates, international visitors staying in hotels are more likely to have above-average total expenditure compared to those who do not use accommodation (Agustina et al., 2022).

Meanwhile, international visitors who visit Indonesia for a maximum of 12 nights in one visit are 5.55 times more likely to have high expenditure than those who stay more than 12 nights. The longer international visitors stay in Indonesia, the smaller their expenditure per day (Jurdana and Frleta, 2020), but the magnitude of the reduction in expenditure per day decreases as the duration of visit increases (Sanchez, Rubio, and Collado, 2013).

These results can be used as a consideration in tourism sector policies formulation in Indonesia. Policies related to increasing foreign exchange through tourism expenditure should pay attention to the determinants of tourism expenditure.

Technical Notes

Data Collection Method

The data presented in this publication consists of average duration of visit, characteristics of international visitors, and international visitor expenditures obtained through the 2022 Passenger Exit Survey (PES). PES 2022 data collection was conducted through direct interviews with respondents using Computer Assisted Personal Interviewing (CAPI). CAPI is an interview technique in which an enumerator or interviewer uses a smartphone or tablet, which can be used to answer questions in the questionnaire.

Data collection using CAPI has many advantages, including minimizing costs incurred due to the use of paper, pencils, erasers, and other manual tools. The time required is also faster because data in the field can be directly stored in softcopy and can be immediately combined for processing.

Data collection for PES 2022 was conducted at international departure gates of airports/ports/Cross Border Posts located in fifteen provinces in Indonesia. Interviews were conducted when respondents were leaving Indonesia by air, sea, and land (international departure gates). Data collection was conducted every month during 2022.

https://www.bps.go.id

Weights

PES 2022 data collection was conducted by non-probability sampling, namely by providing quotas for each nationality of international visitors according to survey location (quota sampling). An alternative to estimate non-probability samples is to build a model of analytical variables in a survey and use the model to project the full population (Valliant et al, 2018). The method applied is the superpopulation model, which uses a model to predict units not selected in the sample. The weight for the ith unit can be expressed in the following equation:

$$w = 1 + t_{\overline{sx}}^{T} A_s^{-1} x_i$$

Notes:

w = weight for i^{th} unit;

$t_{\overline{sx}}^{T}$ = total vector of auxiliary variables x for non-sampled units;

$A_s^{-1} = A_s^T X_s$ where x adalah $n \times p$ covariate matrix of n units sampled.

PES 2022 population data used is population of international visitor arrivals sourced from Director General of Immigration of the Ministry of Law and Human Rights in 2022. In addition, the auxiliary variable used is the number of international visitors by nationality, which also comes from the Director General of Immigration of the Ministry of Law and Human Rights.

After calculating the weights, an estimate is made for the average expenditure of international visitors. The average expenditure of international visitors is calculated using a weighted average by nationality.

https://www.bps.go.id

Respondents

Respondents in this survey include all people who are identified as traveller, both international visitors and non-international visitors, and will leave the territory of Indonesia by air, sea and land. The mechanism for determining respondents is as follows:

1. Select respondents whose residence is not in Indonesia
2. If the respondent works for wages in Indonesia, make sure that the duration of visit in Indonesia is less than 365 night.

For group respondents, one member of the group can be selected who is considered to understand the expenses during the trip. However, the data presented in this publication only presents data on international visitors.

Appendices

Table : 1 Percentage of International Visitors by Nationality and Main Occupation, 2022 (percent)

Nationality	Professional	Manager	Government Official and Employee	Student	Others	Total

CONFIDENTIAL

The confidentiality of the data provided is guaranteed by Act No. 16 of 1997 concerning Statistics.

Sign or fill in the answer

1. Name : .....
2. Age : ..... years old
3. Sex : Male -1 Female -2 ☐
4. Nationality : ..... ☐☐☐
5. a. Country of residence : ..... ☐☐☐
   b. City of residence : ..... ☐☐☐
6. Main Occupation: ☐

Professional	-1	Housewife	-6
subject :			
Business Manager/Executive	-2	Student	-7
Government/UN Official	-3	Retired	-8
Military	-4	Others, please write down	-9
Clerical/Technical/Sales	-5	(.....)	

7. Main purpose of visit: ☐☐

• Personal			
Holiday, leisure, recreation	-1	Beauty	-6
Visiting friends, relatives	-2	Religion/pilgrimages	-7
Training/course	-3	Shopping	-8
Long Education	-4	Other personal purpose	-9
Health	-5	(.....)	
• Business and professional			
Meeting	-10	Convention	-12
Incentive	-11	Exhibition	-13
Other business and professional purpose (.....)			-14
• Work (employed by a resident entity)			-15

8. If the answer of Question 6 is 1 and Question 7 is 10 – 15,
   a. How much income did you receive in this trip?
      Currency: ..... Value : .....
   b. Total contract value including income received above:
      Currency : ..... Value : .....
9. If the answer of Question 7 is 15
   How frequent do you usually visit Indonesia in one year? ☐☐☐
10. If the answer of Question 7 is 4 or 15
    Name of institution/university attended : .....
    a. Housing and Living cost (per month)
       Currency : ..... Value : .....
    b. Only for the answer of Question 7 is 4 (Long Education)
       Tuition fee (per semester)
       Currency : ..... Value : .....
11. Port of entry to Indonesia: .....
12. a. Main destination city: .....
