# KATA PENGANTAR

Industri pariwisata sebagai salah satu sumber pertumbuhan ekonomi memerlukan perencanaan yang lebih terarah. Perencanaan yang baik bertujuan untuk mengoptimalkan peran pariwisata dalam peningkatan kesejahteraan. Data yang berkualitas merupakan satu prasyarat untuk mendukung penyusunan perencanaan yang dapat mampu memberikan perbaikan.

Publikasi Statistik Wisatawan Nasional Tahun 2022 diterbitkan sebagai salah satu upaya untuk penyediaan data pariwisata yang berkualitas. Data wisatawan nasional dan karakteristiknya dapat digunakan untuk perencanaan industri pariwisata pendukung perjalanan wisatawan nasional. Data yang disajikan berasal dari berbagai sumber, yaitu Direktorat Jendral Imigrasi Kementerian Hukum dan HAM, *Mobile Positioning Data* (MPD) dan Survei Digital Wisatawan Nasional.

Beberapa aspek masih harus ditingkatkan untuk perbaikan kualitas data. Diharapkan perbaikan terus dilakukan di masa datang agar publikasi memberikan manfaat lebih tinggi bagi pengguna data. Terakhir, diucapkan terima kasih pada semua pihak sehingga publikasi Statistik Wisatawan Nasional Tahun 2022 ini dapat terwujud.

# PREFACE

The tourism industry as a source of economic growth requires more focused planning. Good planning aims to optimize the role of tourism in improving welfare. Quality data is a prerequisite to support the preparation of planning that can provide improvements.

The 2022 Outbound Tourism Statistics publication was published as one of the efforts to provide quality tourism data. Outbound tourism data and their characteristics can be used for tourism industry planning. The data comes from various sources: the Directorate General of Immigration of the Ministry of Law and Human Rights, Mobile Positioning Data (MPD), and the Outbound Tourism Digital Survey.

Some aspects still have to be improved for data quality improvement. It is intended that advancements will keep coming so that publications would help data users more in the future. Finally, thanks to all parties who helped make the publication of The 2022 Outbound Tourism Statistics possible.

# RINGKASAN EKSEKUTIF

## PULIHNYA AKTIVITAS WISATAWAN NASIONAL SEBAGAI MOMENTUM OPTIMALISASI PERANAN INDUSTRI PARIWISATA PENDUKUNG PERJALANAN

**Bangkitnya industri pariwisata pada tahun 2022 memberikan harapan baru terhadap pertumbuhan ekonomi nasional.** Berhasilnya penanganan pandemi Covid-19 yang diikuti dengan kebijakan pelonggaran pembatasan mobilitas perjalanan dapat menggairahkan kembali industri pariwisata yang sempat terpuruk pada tahun 2020-2021. Fenomena revenge tourism atau "wisata balas dendam" ditandai dengan dengan adanya permintaan tinggi untuk berwisata, tidak hanya aktivitas wisata di dalam negeri tetapi juga ke luar negeri. Perjalanan wisatawan Indonesia ke luar negeri dikenal sebagai wisatawan nasional. Meningkatnya aktivitas wisatawan didukung oleh membaiknya kondisi perekonomian dan pendapatan masyarakat. Perekonomian Indonesia tahun 2022 tumbuh hingga 5,31 persen dengan PDB perkapita mencapai Rp 71,0 juta atau US$ 4.783,9.

**Volume perjalanan wisatawan nasional tahun 2022 mencapai dua kali lipat dibandingkan periode sebelumnya.** Jumlahnya mencapai 3,54 juta perjalanan wisatawan nasional. Namun baru sekitar 30 persen jika dibandingkan tahun 2019 sebelum merebaknya pandemi Covid-19. Arab Saudi merupakan negara tujuan utama perjalanan wisatawan nasional khususnya untuk tujuan keagamaan/berziarah. Singapura dan Malaysia menjadi tujuan favorit selanjutnya. Hal ini dipengaruhi jarak yang dekat dan ketersediaan sarana transportasi yang memadai. Jarak yang dekat dalam arti waktu yang singkat, nyaman, dan berbiaya murah. Kawasan ASEAN masih menjadi tujuan utama perjalanan wisatawan nasional meskipun proporsinya cenderung menurun setiap tahun.

**Sebagian besar pelaku perjalanan wisatawan nasional tahun 2022 berjenis kelamin laki-laki.** Proporsi laki-laki mencapai lebih dari 60 persen. Hal ini berbeda dengan kondisi normal sebelum pandemi, wisatawan nasional lebih banyak berjenis kelamin perempuan. Dilihat dari tujuan maka maksud utama perjalanan wisatawan nasional lebih dominan untuk tujuan personal, khususnya berlibur/rekreasi. Berbeda dengan tujuan personal yang relatif seimbang antara wisatawan laki-laki dan perempuan, jumlah wisatawan laki-laki lebih dari tiga kali lipat dibandingkan perempuan pada tujuan bisnis. Kemudian dari sisi usia, pelaku perjalanan wisatawan nasional mayoritas pada kelompok umur 25-44 tahun, yaitu mencapai 72 persen. Wisatawan nasional

https://www.bps.go.id

dengan tujuan negara-negara di Asia cenderung lebih muda usianya.

**Pengeluaran wisatawan nasional pada tahun 2022 meningkat dibandingkan tahun sebelumnya.** Rata-rata pengeluaran wisatawan nasional mencapai US$ 2.626,53 untuk setiap perjalanan. Pengeluran utamanya adalah untuk kebutuhan akomodasi, makan dan minum, serta keperluan individu. Rata-rata lama perjalanan wisatawan nasional juga menunjukkan tren peningkatan yakni mencapai 10 sampai 11 malam. Profesional dan pengusaha cenderung lebih besar pengeluarannya dibandingkan pekerjaan lainnya. Perjalanan dengan tujuan bisnis lebih besar pengeluarannya dibandingkan tujuan personal. Inggris menjadi negara tujuan perjalanan wisatawan nasional dengan rata-rata pengeluaran paling besar, yaitu mencapai US$ 19.353,18. Sedangkan Singapura merupakan negara tujuan dengan pengeluaran rendah, yakni sekitar US$ 1.008,78. Hal ini berkaitan dengan rata-rata lama tinggal wisatawan nasional tujuan Inggris yang mencapai 62 malam, jauh lebih lama dibandingkan tujuan Singapura yang hanya sekitar 4 malam.

**Besarnya potensi ekonomi dari aktivitas perjalanan wisatawan nasional diharapkan dapat dimanfaatkan secara optimal oleh industri pariwisata pendukung perjalanan wisatawan nasional.** Perjalanan wisatawan nasional memang menguntungkan negara tujuan wisata dengan berkembangnya industri pariwisata dan pendukungnya di negara tersebut. Tetapi keterlibatan industri pariwisata domestik seperti agen perjalanan dan sektor transportasi (maskapai penerbangan/kapal penyebrangan) juga dapat membantu mendongkrak perekonomian nasional dengan terciptanya nilai tambah dan penyerapan tenaga kerja. Sisi positif lain adalah mendorong industri pariwisata domestik untuk meningkatkan pelayanan, kreatif dalam menciptakan daya tarik wisata, dan perbaikan infrastruktur pendukung. Hal ini tentunya tidak hanya dapat menarik lebih banyak wisatawan mancanegara tetapi juga wisatawan nasional yang sering ke luar negeri karena destinasi wisata domestik lebih berdaya saing dan berkualitas.

https://www.bps.go.id

# EXECUTIVE SUMMARY

## RECOVERING NATIONAL TOURIST ACTIVITY AS A MOMENTUM TO OPTIMIZE THE ROLE OF THE TRAVEL SUPPORT TOURISM INDUSTRY

**The rise of the tourism industry in 2022 provides new hope for national economic growth.** The successful handling of the Covid-19 pandemic followed by a policy of easing restrictions on travel mobility can revive the tourism industry which had slumped in 2020-2021. The phenomenon of revenge tourism is characterized by a high demand for travel, not only domestic tourism activities but also abroad. Indonesian tourists traveling abroad are known as outbound tourists. Increased tourist activity is supported by improving economic conditions and people's income. Indonesia's economy in 2022 grew up to 5.31 percent with GDP per capita reaching Rp 71.0 million or US$ 4,783.9.

**The volume of outbound trips in 2022 doubled compared to the previous period.** The number reached 3.54 million trips. But only about 30 percent compared to 2019 before the outbreak of the Covid-19 pandemic. Saudi Arabia is the main destination country for outbound trips, especially for religious / pilgrimage purposes. Singapore and Malaysia are the next favorite destinations. This is influenced by the close distance and the availability of adequate transportation facilities. Short distance in the sense of short time, convenience, and low cost. The ASEAN region is still the main destination for national tourist trips although the proportion tends to decrease every year.

**Most of the outbound trips in 2022 were conducted by male.** The proportion of men reaches more than 60 percent. This is different from the normal conditions before the pandemic, where outbound visitors were mostly female. In terms of purpose, the main purpose of outbound trips is more dominant for personal purposes, especially vacation/recreation. In contrast to personal purposes which are relatively balanced between male and female visitors, the number of male visitors was more than three times that of female for business purposes. In terms of age, the majority of visitors were in the age group of 25-44, reaching 72 percent. Visitors with destinations in Asia tend to be younger in age.

**Outbound expenditure in 2022 increased compared to the previous year**. The average expenditure of outbound trips in 2022 reached US$ 2,626.53 for each trip. The main expenditures are for accommodation needs, food and beverages, and individual needs. The

https://www.bps.go.id

average duration of trips also shows an increasing trend, reaching 10 to 11 nights. Professionals and businessmen tend to spend more than other occupations. Travel for business purposes is greater than travel for personal purposes. The UK is the destination country with the highest average expenditure, reaching US$19,353.18. Meanwhile, Singapore is the destination country with the lowest expenditure, which is around US $1,008.78. This is related to the average length of stay of outbound trips to the UK destination, which reaches 62 nights, much longer than the Singapore destination, which is only about 4 nights.

**The large economic potential of outbound trip activities is expected to be optimally utilized by the tourism industry.** Outbound trips do benefit destination countries with the development of the tourism industry and its supporters in the country. But the involvement of domestic tourism industries such as travel agents and the transportation sector (airlines/cruise ships) can also help boost the national economy by creating added value and employment. Another positive side is that it encourages the domestic tourism industry to improve services, be creative in creating tourist attractions, and improve supporting infrastructure. This, of course, can not only attract more foreign visitors but also outbound visitors who often go abroad because domestic destinations are more competitive and higher quality.

## Pendahuluan

Beberapa dekade terakhir menunjukkan bahwa batas negara semakin kabur karena dampak globalisasi. Globalisasi didefinisikan sebagai koneksi antarnegara yang semakin intensif, berujung pada terbentuknya struktur hubungan yang mapan antarnegara serta integrasi global pada semua aspek kehidupan seperti budaya, ekonomi, ekologi, politik, sosial dan teknologi. Globalisasi dapat memberikan dampak positif dan negatif, namun secara umum bahasan tentang keuntungan yang ditimbulkan lebih mendominasi.

Berlandaskan pada pentingnya globalisasi untuk mempengaruhi kehidupan sosial ekonomi, beberapa institusi berupaya mengukur tingkat dan perubahan globalisasi. Hal tersebut bertujuan untuk mengetahui disparitas antarwilayah serta pengaruhnya pada dinamika kehidupan sosial, ekonomi, maupun politik. Ukuran yang sering dijadikan tolok ukur adalah Maastricht Globalization Index (MGI) dan KOF Globalization Index (KOFGI). Kedua indeks tersebut secara umum mencakup dimensi yang sejalan dalam mengukur globalisasi. MGI menggunakan dimensi politik, ekonomi, sosial budaya, ekologi dan teknologi dalam mengidentifikasi konsep globalisasi. Sedangkan KOFGI menggunakan dimensi perdagangan, keuangan, interpersonal, informasi, budaya dan politik untuk menggambarkan globalisasi secara komprehensif.

Penggunaan wisata internasional sebagai salah satu faktor yang dicakup untuk menentukan globalisasi oleh kedua indeks diatas menjadi hal yang menarik. Selain pergerakan barang dan jasa, pergerakan individu melewati batas negara tidak dapat dipungkiri menjadi salah satu penentu tingkat globalisasi. Pergerakan individu termasuk pariwisata disinyalir mampu mendorong pertukaran barang dan jasa serta akulturasi budaya lintas negara. Dengan kata lain, pariwisata ikut menjadi faktor pendorong globalisasi.

Globalisasi dan pariwisata saling berkaitan. Berbagai kemudahan sebagai dampak globalisasi menjadi stimulan untuk melakukan perjalanan wisata. Globalisasi pada perdagangan mendorong pertukaran barang yang lebih mudah sehingga produk spesifik suatu negara menjadi mudah ditemukan di daerah tujuan wisata. Keterbukaan jasa keuangan seperti perbankan internasional membuat transaksi menjadi lebih mudah dilaksanakan. Begitu pula akulturasi budaya sebagai dampak keterbukaan memberikan fleksibilitas untuk menerima perbedaan budaya sehingga industri pariwisata lebih berkembang.

Mengacu pada teori migrasi, banyak faktor pendorong untuk melakukan perjalanan wisata dengan adanya globalisasi. Diantara banyaknya faktor pendorong, kondisi ekonomi yang mapan tetap menjadi satu faktor utama yang menstimulasi individu melakukan perjalanan wisata. Kapasitas keuangan menjadi pendukung untuk mengakses transportasi, menggunakan jasa akomodasi maupun menutupi semua pengeluaran yang terjadi selama perjalanan wisata. Oleh karena itu, tidak salah jika jumlah perjalanan wisata dapat digunakan sebagai indikator untuk kinerja atau kondisi perekonomian. Bagi daerah tujuan wisatawan, hal ini mampu memberikan pendapatan melalui berbagai transaksi konsumsi barang maupun jasa. Sementara bagi daerah asal wisatawan menunjukkan kemapanan ekonomi yang memungkinan penduduknya menjangkau kebutuhan tersier.

https://www.bps.go.id

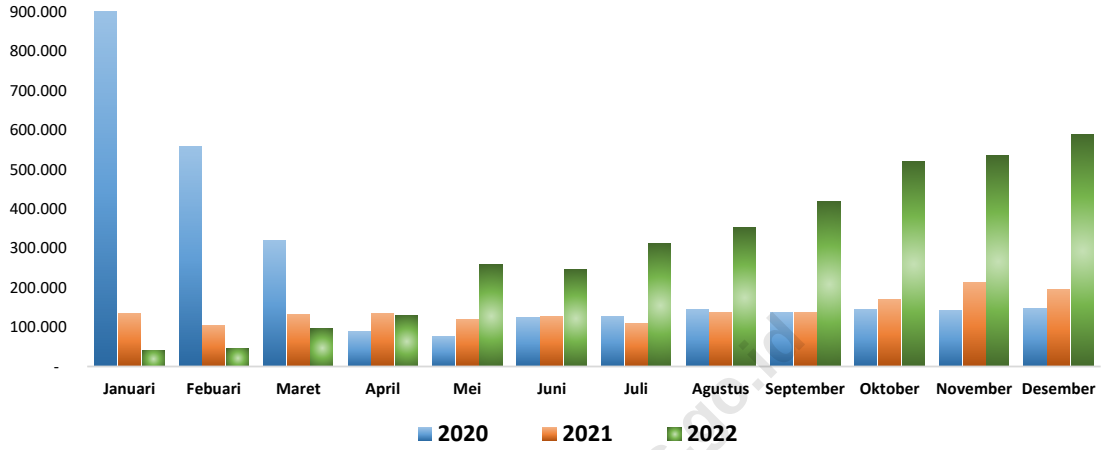

## Konsep dan Definisi Wisatawan Nasional

Dalam *International Recommendations for Tourism Statistics* (IRTS) 2008, pariwisata mengacu pada aktivitas pengunjung (*visitor*). *"A visitor is a traveller taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure or other personal purpose) other than to be employed by a resident entity in the country or place visited."*

- Pengunjung (*visitor*) adalah seseorang yang melakukan perjalanan ke tujuan utama di luar lingkungannya yang biasa, selama kurang dari satu tahun, untuk tujuan utama apa pun (bisnis, liburan, atau tujuan pribadi lainnya) selain untuk dipekerjakan oleh entitas penduduk di negara tersebut atau tempat yang dikunjungi. Cakupan ini lebih luas daripada persepsi tradisional wisatawan, yang hanya mencakup mereka yang bepergian untuk rekreasi.
- Penduduk Indonesia adalah semua orang yang berdomisili di wilayah geografis Republik Indonesia selama satu tahun atau lebih, dan atau mereka yang berdomisili kurang dari satu tahun tetapi bertujuan untuk menetap.
- Dari konsep di atas, maka wisatawan nasional didefinisikan sebagai penduduk Indonesia yang melakukan perjalanan ke luar negeri di luar lingkungan tempat tinggal mereka yang biasa dengan lama perjalanan tidak lebih dari satu tahun, perjalanan tersebut bertujuan untuk

liburan, bisnis, atau tujuan lain dan bukan untuk dipekerjakan oleh entitas penduduk (orang/ perusahaan) di negara yang dikunjungi.

**Grafik 1.1. Jumlah Wisatawan Nasional per Bulan, 2020-2022**

## Wisatawan Nasional dan Kondisi Perekonomian

*"Data wisatawan nasional tahun 2022 menunjukkan adanya peningkatan setelah sempat turun sangat tajam pada tahun 2020 dan 2021."*

Studi empiris dengan kasus negara Tiongkok menemukan bahwa wisatawan nasional (wisnas), perdagangan internasional dan pertumbuhan ekonomi memiliki keterkaitan. Demikian juga analisis data Meksiko, mengidentifikasi adanya hubungan negatif antara ***Compensated Misery Index*** (CMI) dengan jumlah wisnas (Sanchez Lopez, 2022). Semakin tinggi CMI semakin sedikit jumlah wisnas. CMI merupakan indeks komposit menggambarkan kesejahteraan sosial dimana semakin tinggi indeks merepresentasikan yang kemampuan yang rendah untuk mengakses kebutuhan tersier. CMI sendiri dibentuk dari tingkat pengangguran, tingkat inflasi dan pertumbuhan GDP. Studi tersebut menunjukkan adanya keterkaitan antara kondisi perekonomian dan jumlah wisnas sebab kemampuan individu untuk melakukan perjalanan akan dipengaruhi oleh kapasitas keuangannya sebagai salah satu aspek pendorong.

Pandemi Covid-19 yang terjadi di awal tahun 2020 memberikan pengaruh besar pada sektor pariwisata, tidak terkecuali pada wisatawan nasional. Jumlah wisnas di tahun 2020

**Grafik 1.2. Jumlah Wisatawan Nasional Indonesia Tahun 2019-2022 dan Tingkat Pertumbuhan ekonomi y on y**

Sumber: - Kementerian Hukum dan Hak Asasi Manusia (Direktorat Jenderal Imigrasi)
- Kementerian Pariwisata dan Ekonomi Kreatif, *Mobile Positioning Data*
- Badan Pusat Statistik, *Mobile Positioning Data*

https://www.bps.go.id

menurun sekitar 75 persen dibandingkan tahun 2019. Tren ini berlanjut pada tahun 2021 dimana jumlah wisnas turun 41 persen. Namun demikian, jumlah wisnas meningkat cukup besar di tahun 2022 mencapai 3,5 juta orang atau meningkat lebih dari 100 persen. Kondisi ini didukung oleh berkurangnya dampak pandemi dan kegiatan perjalanan relatif kembali normal.

Selanjutnya, mengamati jumlah wisnas per bulan, teridentifikasi bahwa pada kondisi normal seperti tahun 2019, wisnas akan tinggi di bulan Januari, Juni dan akhir tahun. Hal ini mungkin disebabkan oleh masa liburan sekolah dan libur akhir tahun. Pada tahun 2020, jumlah wisnas sangat tinggi diawal tahun dibandingkan bulan lain karena belum ada pandemi Covid-19. Namun jumlah tersebut semakin menurun seiring dengan Covid-19 yang mulai berdampak luas pada Maret 2020. Penurunan jumlah wisnas berlanjut sepanjang tahun 2021. Sebaliknya pada tahun 2022, tiga bulan awal jumlah wisnas sangat rendah dan meningkat pesat mulai April 2022. Hal ini disebabkan kondisi mobilitas penduduk mulai kembali normal setelah pandemi.

*"Peningkatan Statistik Wisnas di Indonesia relatif sejalan dengan pemulihan ekonomi pada tahun 2022."*

Pandemi Covid-19 yang terjadi di awal 2020 dan berlanjut di 2021 memiliki dampak

yang luas termasuk penurunan pertumbuhan ekonomi Indonesia. Di tahun 2022, Covid-19 relatif terkendalikan sebagai salah satu hasil penggunaan vaksin dan booster. Didampingi dengan berbagai intervensi untuk mengurangi dampak ekonomi akibat pandemi, pemulihan kondisi perekonomian mulai terlihat di tahun 2022. Rilis data Produk Domestik Bruto (PDB) oleh Badan Pusat Statistik (BPS) mengungkap bahwa perekonomian tumbuh sekitar 5 persen year on year di tahun 2022. Tingkat pertumbuhan ini tidak jauh berbeda dengan kondisi 2019 sebelum terjadinya pandemi. Jadi, dapat dikatakan bahwa perekonomian memiliki momentum untuk kembali normal setelah mengalami pelambatan di tahun 2020 dan 2021.

Jumlah wisnas sebagai kegiatan perjalanan sangat ditentukan oleh regulasi yang diterapkan untuk pembatasan mobilitas penduduk saat pandemi. Namun di Indonesia, kondisi perekonomian juga ada pengaruhnya dalam menentukan wisnas walaupun tidak konsisten setiap tahun. Pada tahun 2020 ketika pertumbuhan ekonomi mengalami pelambatan, jumlah wisnas juga mengalami penurunan. Tren ini berlanjut di 2021, jumlah wisatawan nasional turun tajam. Sedangkan ekonomi tumbuh positif dibandingkan tahun 2020. Seolah bahwa kondisi perekonomian tidak berdampak pada wisatawan nasional, namun jika diamati bahwa walaupun ekonomi tumbuh positif tetapi belum kembali normal pada level sebelum pandemi. Pertumbuhan positif lebih disebabkan oleh perbandingan dengan kondisi perekonomian tahun 2020 yang sudah mengalami pelambatan. Selanjut tren pertumbuhan ekonomi dan jumlah wisatawan nasional kembali sejalan di tahun 2022, dimana keduanya tumbuh positif walaupun jumlah wisnas belum kembali normal seperti pada level sebelum pandemi.

https://www.bps.go.id

*"Perdagangan Internasional tidak selalu mempengaruhi jumlah perjalanan wisatawan nasional."*

Banyak studi dilakukan yang terfokus pada dampak jumlah wisatawan mancanegara (wisman) pada pertumbuhan ekonomi. Kedatangan wisman merupakan faktor pendorong untuk penciptaan kegiatan usaha dan lapangan kerja di daerah destinasi wisata. Demikian juga pengeluaran wisatawan asing merupakan sumber pemasukan devisa bagi negara tujuan. Bahkan juga sudah dibuktikan bahwa turis mancanegara juga memiliki dampak panjang bagi perkembangan ekonomi.

Walaupun tidak banyak yang mengulas dampak ekonomi wisatawan nasional (wisnas), namun analisis data empiris beberapa negara menunjukan bahwa tren jumlah wisnas juga sejalan dengan perdagangan internasional. Disinyalir meningkatnya perdagangan internasional mendorong peningkatan permintaan dan kemudahan melakukan perjalanan seperti menurunnya biaya yang harus dikeluarkan. Hal ini akan berujung pada peningkatan volume perjalanan wisatawan nasional.

Analisis tersebut sesuai untuk kondisi data tahun 2022, dimana peningkatan wisatawan

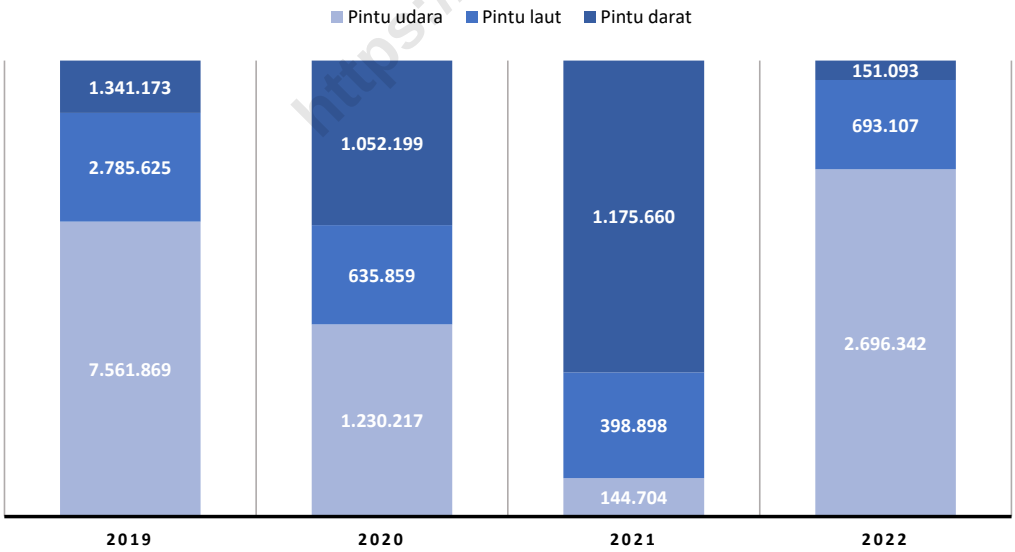

nasional beriringan dengan peningkatan volume maupun nilai perdagangan internasional Indonesia. Pada tahun 2022 total nilai ekspor Indonesia meningkat 26,07 persen dibandingkan tahun 2021. Demikian juga total nilai impor juga meningkat 21,07 persen pada periode yang sama. Tren yang sejalan juga terjadi pada tahun 2020, dimana jumlah perjalanan wisnas dan total volume perdagangan internasional Indonesia sama-sama mengalami penurunan dari tahun sebelumnya. Namun pada tahun 2021 ketika jumlah wisnas turun drastis, ternyata volume perdagangan Indonesia justru meningkat. Arah pertumbuhan yang berbeda pada periode ini mengindikasikan bahwa perjalanan wisnas tidak selalu berbanding lurus dengan perdagangan internasional.

## Daya Dukung Infrastuktur

Infrastruktur merupakan salah satu faktor penting untuk industri pariwisata. World Economic forum (WEF) menggunakan infrastruktur sebagai satu pilar untuk menghitung Travel and Tourism Development Index (TTDI). Data Travel and Tourism Competitiveness Index (TTCI)

https://www.bps.go.id

**Grafik 1.3. Jumlah Wisatawan Nasional menurut Pintu Kedatangan, 2019-2022**

Sumber: - Kementerian Hukum dan Hak Asasi Manusia (Direktorat Jenderal Imigrasi)
- Kementerian Pariwisata dan Ekonomi Kreatif, *Mobile Positioning Data*
- Badan Pusat Statistik, *Mobile Positioning Data*

tahun 2019 (sekarang berganti menjadi TTDI) menunjukkan bahwa infrastruktur bandara Indonesia memiliki skor yang baik, termasuk dalam range 20-40 persen skor terbaik. Sedangkan untuk pelabuhan laut dan infrastruktur transportasi darat memperoleh skor yang lebih rendah.

Data wisatawan nasional menurut pintu kedatangan sepertinya juga mengindikasikan daya dukung infrastruktur untuk perjalanan wisata. Pada tahun 2019, hampir 65 persen wisatawan nasional menggunakan bandara. Kondisi ini tidak berbeda dengan tahun 2022, dimana 77,5 persen wisatawan nasional terdata pada pintu kedatangan pelabuhan udara. Namun dominasi penggunaan transportasi udara bukan hanya disebabkan infrastuktur yang lebih baik. Penggunaan sarana atau moda transportasi juga dipengaruhi oleh faktor lain seperti tujuan perjalanan, pertimbangan waktu, harga dan daya beli serta aksesibilitas fasilitas.

https://www.bps.go.id

# Karakteristik Perjalanan Wisatawan Nasional

*ilustrasi: storyset.com*

https://www.bps.go.id

Bangsa Indonesia dikenal sebagai bangsa penjelajah. Suku-suku yang tinggal di nusantara sudah terbiasa melakukan perjalanan ke luar wilayah nusantara untuk berbagai tujuan, yang utamanya adalah dorongan ekonomi dan perdagangan. Sebagai contohnya adalah Kerajaan Syailendra sudah dapat membuat kapal layar yang digunakan pelaut untuk berdagang rempah-rempah mengarungi Samudera Hindia hingga Madagaskar, Afrika sekitar abad ke-8. Suku Bugis sejak abad ke-14 sudah mampu membuat kapal layar cukup besar yaitu jenis kapal pinisi. Kerajaan Majapahit memiliki lima jalur perdagangan mencakup wilayah ASEAN dan India bagian selatan pada abad ke-15. Hal ini semakin menegaskan bahwa perjalanan ke luar negeri sudah sejak lama menjadi bagian dari bangsa Indonesia.

Saat ini perjalanan memiliki banyak tujuan. Perjalanan tidak selalu dilakukan karena dorongan ekonomi. Salah satu bentuknya adalah perjalanan wisata yang menjadi bagian dari kebutuhan atau gaya hidup. Perjalanan wisata ke luar negeri memberikan pengalaman yang sangat berharga bagi wisatawan dalam memaknai kehidupan. Pola perjalanan wisata dibentuk oleh kebutuhan atas pengalaman dan penghayatan diri. Banyak faktor yang dapat mempengaruhi motivasi atau tujuan perjalanan wisata. Motivasi tersebut dapat berasal dari diri pelaku perjalanan (internal) maupun pengaruh faktor eksternal.

## Negara Destinasi Wisatawan Nasional

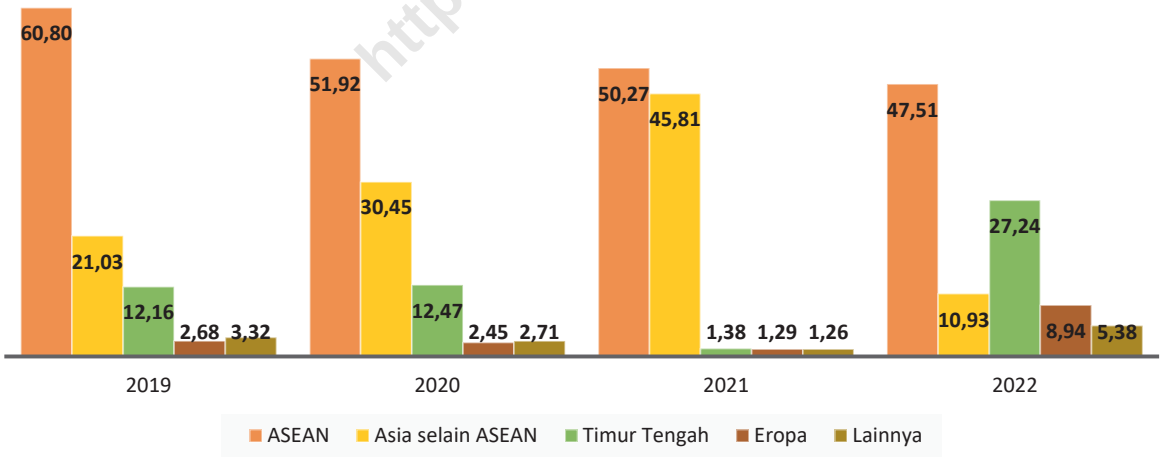

*"Distribusi perjalanan wisnas ke kawasan ASEAN cenderung menurun meskipun tetap yang terbesar"*

Negara tujuan utama dari wisatawan nasional masih didominasi oleh perjalanan ke negara-negara tetangga, khususnya di kawasan ASEAN meskipun persentasenya cenderung menurun setiap tahunnya. Tingginya frekuensi perjalanan ke kawasan ASEAN dikarenakan jarak yang relatif dekat sehingga biaya transportasi cenderung lebih murah. Perjalanan wisatawan nasional dengan tujuan utama negara-negara di ASEAN mencapai 47,51 persen pada tahun 2022. Malaysia dan Singapura merupakan negara tujuan utama perjalanan wisatawan nasional terbesar di ASEAN yaitu masing-masing sebesar 18,56 persen dan 18,05 persen.

Malaysia dan Singapura merupakan negara yang cukup baik dalam pembangunan kepariwisataan berkelanjutan. Kedua negara tersebut masing-masing menduduki posisi ke-38 dan posisi ke-9 dari 117 negara dalam Travel and Tourism Development Index (TTDI) 2021. Pengukuran indeks didasarkan pada serangkaian faktor dan kebijakan yang memungkinkan pembangunan berkelanjutan sektor perjalanan dan pariwisata yang tangguh. Hal tersebut pada gilirannya memberikan kontribusi bagi pembangunan suatu negara.

https://www.bps.go.id

**Grafik 2.1. Perkembangan Distribusi Perjalanan Wisnas menurut Kawasan Negara Tujuan (persen), 2019-2022**

Sumber: - Kementerian Hukum dan Hak Asasi Manusia (Direktorat Jenderal Imigrasi)
- Kementerian Pariwisata dan Ekonomi Kreatif, *Mobile Positioning Data*
- Badan Pusat Statistik, *Mobile Positioning Data*

Ada perubahan dalam perkembangan distribusi perjalanan wisatawan nasional berdasarkan tujuan kawasan utama. Tujuan negara-negara di ASEAN cenderung menurun persentasenya dan tidak lagi dominan. Pada tahun 2022, jumlah wisatawan nasional yang melakukan perjalanan ke kawasan tersebut tidak lagi mencapai setengahnya. Hal yang menarik adalah naiknya posisi Timur Tengah sebagai kawasan tujuan utama ke posisi kedua menggantikan Asia selain ASEAN yang turun ke posisi ketiga.

*"Jarak dan infrastuktur pendukung menjadi penarik untuk perjalanan wisatawan nasional ke Malaysia dan Singapura."*

Tingginya intensitas perjalanan wisatawan nasional ke Malaysia dan Singapura dipengaruhi oleh faktor penarik, yaitu jarak yang dekat dan ketersediaan sarana transportasi yang memadai. Jarak yang dekat dalam arti waktu yang singkat, nyaman, dan berbiaya murah. Ketersediaan sarana transportasi menuju kedua negara tersebut dapat menggunakan berbagai macam moda seperti, transportasi udara, laut, dan bahkan darat khusus untuk Malaysia. Perjalanan melalui pintu udara diantaranya melalui Bandara Soekarno Hatta, Juanda, dan Kualanamu. Perjalanan juga dapat ditempuh melalui pintu laut, antara lain Batam, Tanjung Uban, Tanjung Balai Karimun, dan Tanjung Pinang. Sedangkan pintu perbatasan darat terbanyak yang dilewati wisatawan nasional adalah Entikong dan Aruk, dimana pintu masuk tersebut berbatasan langsung dengan Malaysia.

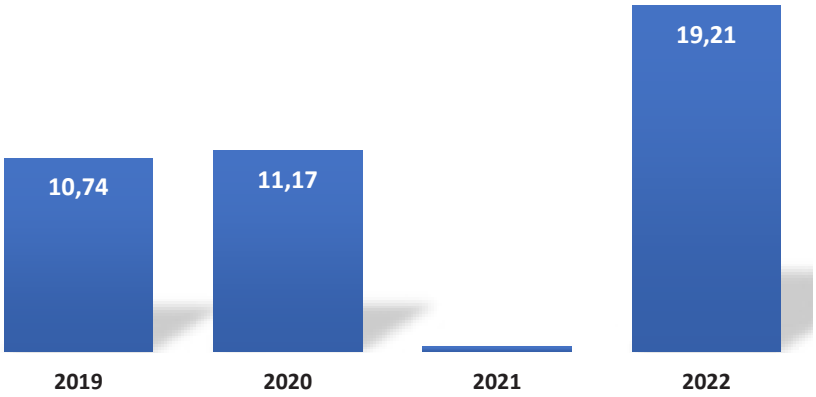

*"Arab Saudi menjadi negara tujuan utama terbesar dari wisatawan nasional yang bertujuan untuk keagamaan (berziarah)."*

Arab Saudi merupakan negara tujuan utama perjalanan wisatawan nasional pada tahun 2022, yaitu mencapai 19,21 persen. Proporsi perjalanan wisata ke negara tersebut meningkat tajam dibandingkan periode sebelum pandemi Covid-19. Banyaknya perjalanan wisata ke negara tersebut utamanya dimaksudkan untuk aktivitas keagamaan (berziarah) yaitu ibadah haji dan umrah. Hal ini tidak mengherankan mengingat jumlah jamaah umrah yang naik berkali-kali lipat setelah Pemerintah Arab Saudi membuka akses ibadah umroh dan haji yang sempat ditutup selama 2 tahun terakhir.

Kuota haji Indonesia tahun 2022 mencapai 100.051 orang. Sementara itu, jumlah jemaah umrah pada tahun 2022 mencapai lebih dari setengah juta orang (Kemenag, 2023). Potensi ekonomi yang luar biasa dari aktivitas tersebut berdampak positif secara langsung pada sektor akomodasi, transportasi, serta jasa travel. Penyerapan tenaga kerja baik di dalam negeri maupun di luar negeri tentunya akan meningkat untuk dapat melayani jemaah. Sektor pendukung lainnya, seperti industri dan perdagangan, secara tidak langsung mendapatkan efek positif dari pulihnya kembali pelaksanaan ibadah haji dan umrah.

https://www.bps.go.id

Grafik 2.2. Persentase Perjalanan ke Arab Saudi terhadap Total Wisatawan Nasional, 2019-2022

Sumber: *Mobile Positioning Data* , BPS

https://www.bps.go.id

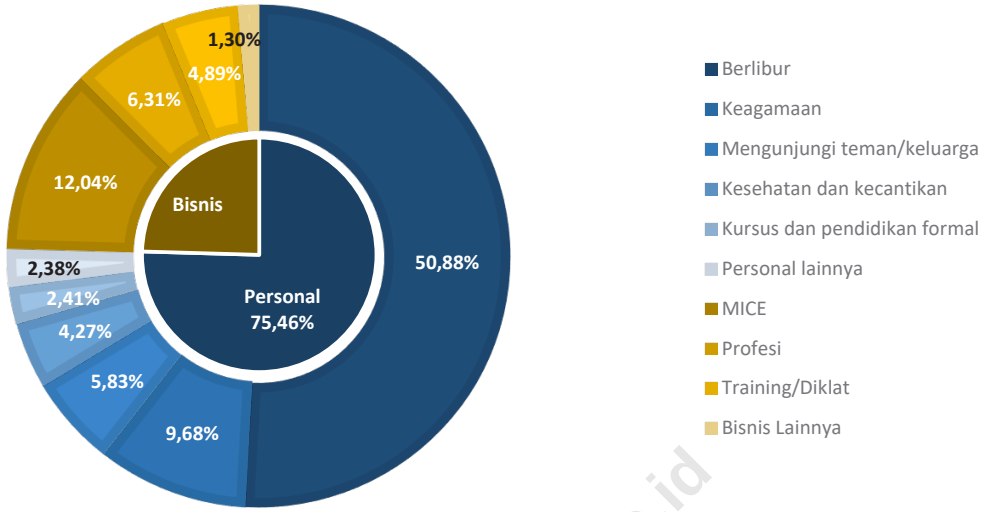

## Tujuan Utama Perjalanan Wisatawan Nasional

Salah satu aspek yang perlu diperhatikan dalam pengembangan kepariwisataan adalah motivasi atau tujuan dari wisatawan. Menurut Mathieson, A. dan Wall, G (1982), motivasi seseorang melakukan perjalanan wisata dapat dikelompokkan menjadi 4 kategori, yaitu: fisik, budaya, personal, serta gengsi dan status. Motivasi wisatawan menjadi faktor penting dalam pengambilan keputusan mengenai lokasi tujuan wisata yang akan dikunjungi. Dalam masyarakat modern, perjalanan wisata dapat dimotivasi oleh lebih dari satu aspek yang terjalin sangat kompleks.

Dalam International Recommendations for Tourism Statistics 2008 tujuan utama suatu perjalanan didefinisikan sebagai tujuan yang jika tidak ada maka perjalanan itu tidak akan terjadi. Informasi mengenai tujuan utama perjalanan wisata berguna untuk menggambarkan pola pengeluaran wisatawan. Selain itu, hal ini juga penting dalam mengidentifikasi elemen kunci dari permintaan pariwisata untuk tujuan perencanaan, pemasaran dan promosi.

Secara garis besar, tujuan utama perjalanan dapat diklasifikasikan menjadi dua kelompok yaitu tujuan personal/pribadi serta tujuan bisnis. Yang termasuk dalam tujuan personal, yaitu berlibur/rekreasi, mengunjungi teman atau kerabat, kesehatan, keagamaan/berziarah, dan belanja. Sedangkan yang termasuk dalam tujuan bisnis dan professional, yaitu menghadiri Meeting, Incentive, Convention and Exhibition (MICE), kegiatan wiraswasta, investor, mengikuti kursus pelatihan kerja/diklat, memberikan keahlian dalam keprofesiannya (memberikan kuliah, pemain konser/pertunjukan, berpartisipasi dalam penelitian ilmiah atau akademis, dll).

Grafik 2.3. Distribusi Perjalanan Wisnas menurut Tujuan Perjalanan (persen), 2022

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

https://www.bps.go.id

*"Sebagian besar maksud utama perjalanan wisatawan nasional adalah tujuan personal."*

Lebih dari tiga perempat (75,46 persen) tujuan perjalanan wisatawan nasional adalah tujuan personal, sedangkan sisanya adalah tujuan bisnis (Gambar 2.4). Tujuan personal yang paling banyak dilakukan adalah untuk liburan (50,88 persen), diikuti oleh keagamaan/umroh (9,68 persen). Sementara untuk bisnis didominasi oleh MICE (12,04 persen). Data ini menunjukkan semakin bervariasinya motivasi atau tujuan utama pelaku perjalanan wisatawan nasional.

'*Revenge travel*' menjadi motivasi meningkatnya aktivitas liburan. *Revenge travel* adalah fenomena perjalanan wisata yang dilakukan oleh masyarakat sebagai balas dendam akibat jenuh terhadap pembatasan perjalanan yang diberlakukan selama pandemi Covid-19. Pandemi Covid-19 memaksa masyarakat untuk mengisolasi diri, membatasi aktivitas sosial serta larangan bepergian sehingga ketika terjadi pelonggaran, memicu keinginan masyarakat untuk pergi berwisata. Selain *revenge travel*, dibukanya kembali penerbangan internasional di beberapa bandara dan pelonggaran akses masuk bagi wisatawan asing di sebagian negara menambah tingginya angka tersebut. Negara-negara di kawasan ASEAN, seperti Singapura dan Malaysia umumnya menjadi negara tujuan untuk berlibur/berekreasi dan juga untuk tujuan MICE.

## Rata-rata Lama Perjalanan Wisatawan Nasional

*"Rata-rata lama perjalanan wisatawan nasional tahun 2022 adalah 11 malam."*

Dari segi durasi perjalanan, rata-rata wisnas melakukan perjalanaan ke luar negeri selama sekitar 11 malam. Umumnya, durasi perjalanan yang pendek untuk negara-negara yang relatif dekat seperti negara-negara di kawasan ASEAN. Sebaliknya, negara-negara di Eropa dan Amerika, rata-rata wisnas menghabiskan waktu selama 30-40 malam. Singapura menjadi negara dengan durasi perjalanan terpendek, yaitu sekitar 4 malam, sedangkan Inggris menjadi negara dengan durasi perjalanan terpanjang, yaitu sekitar 62 malam. Rata-rata lama perjalanan untuk tujuan personal (sekitar 10 malam) sedikit lebih pendek daripada untuk tujuan bisnis (sekitar 14 malam).

*"Penggunaan paket wisata didominasi oleh wisatawan nasional ke Timur Tengah."*

Beberapa karakteristik wisatawan nasional akan terkait dengan karakteristik perjalanan, salah satunya adalah penggunaan paket wisata. Sebagian besar wisatawan nasional tidak menggunakan paket wisata dalam melakukan perjalanannya. Data hasil survei mengungkap bahwa hanya sekitar 20 persen wisatawan nasional yang menggunakan paket wisata. Namun khusus tujuan wilayah Timur Tengah, berlaku sebaliknya. Lebih dari 80 persen pelaku perjalanan ke Timur Tengah menggunakan paket wisata. Persentase tersebut dipengaruhi oleh wisatawan nasional ke Arab Saudi, dimana hampir 92 persen menggunakan paket wisata. Hal ini dapat dipahami mengingat bahwa pelaku perjalanan ke Arab Saudi adalah untuk tujuan ibadah yang pada umumnya dilakukan secara kolektif seperti kelompok pengajian maupun keluarga.

https://www.bps.go.id

# Karakteristik Sosial-Ekonomi Wisatawan Nasional

*ilustrasi: storyset.com*

https://www.bps.go.id

Pelaku perjalanan wisata merupakan pusat pengamatan dari pariwisata itu sendiri. Sama seperti perjalanan pariwisata lainnya, perjalanan wisatawan nasional juga dapat diklasifikasikan berdasarkan karakteristik sosial ekonomi. Karakteristik sosial ekonomi dapat memberikan gambaran yang berbeda mengenai perilaku wisatawan nasional. Dalam International Recommendations for Tourism Statistics 2008 menyebutkan bahwa karakteristik sosial ekonomi yang dimaksud mengacu pada jenis kelamin, umur, status kegiatan ekonomi, pekerjaan, pendapatan dan pendidikan.

## Jenis Kelamin Wisatawan Nasional

Karakteristik pelaku perjalanan wisatawan nasional dapat memberikan gambaran tujuan utama perjalanan. Salah satunya adalah jenis kelamin. Di tahun 2022, secara umum wisatawan nasional didominasi oleh laki-laki (sekitar 61 persen).

Rendahnya persentase wisnas perempuan dimungkinkan karena beberapa hal. Pertama, mobilitas laki-laki cenderung lebih tinggi dibandingkan perempuan yang lebih banyak menghabiskan waktunya untuk urusan domestik rumah tangga. Kedua, meskipun jumlah kasus terkonfirmasi positif Covid-19 mengalami penurunan, namun tidak dapat dipungkiri bahwa pandemi Covid-19 masih menjadi pertimbangan untuk melakukan perjalanan wisata. Hal ini turut mempengaruhi perilaku yang berbeda antara laki-laki dan perempuan. Menurut studi yang dilakukan oleh Gebhard, Regitz-Zagrosek, Neuhaser, Morgan & Klein (2020), perempuan

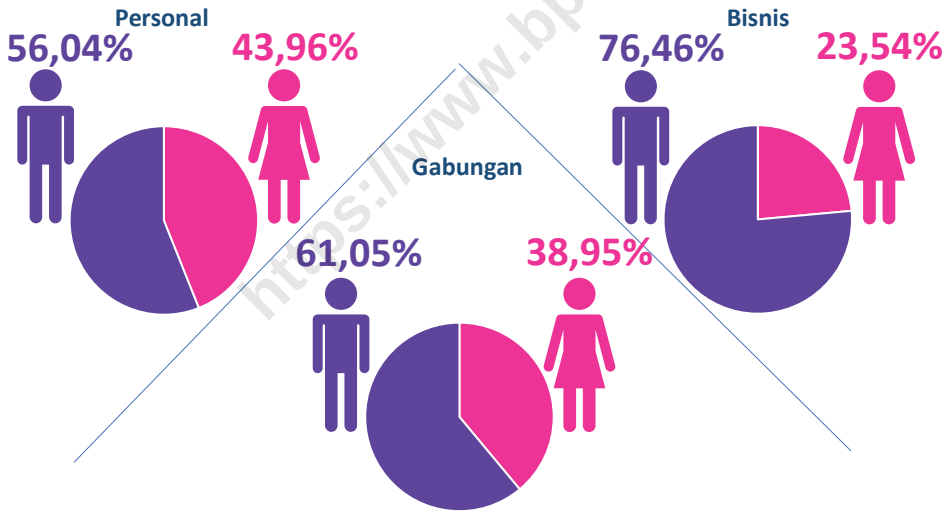

cenderung lebih peduli dengan kesehatan dirinya dibanding laki-laki. Dari sini dapat disimpulkan bahwa sangat mungkin bagi perempuan untuk menghindari bepergian jauh (Matalas, Panaretos, Tzoutzou, & Lazaridis, 2023).

*"Wisatawan nasional didominasi oleh laki-laki."*

Ketika data dipisahkan menurut tujuan utama perjalanan maka terlihat bahwa pada tujuan bisnis sebagian besar dilakukan oleh laki-laki. Dari total semua wisatawan nasional tujuan bisnis, lebih dari 75 persen adalah laki-laki. Sedangkan untuk tujuan personal jumlah wisatawan nasional laki-laki dan perempuan relatif seimbang walaupun laki-laki tetap lebih besar.

Dominasi wisatawan nasional laki-laki ini terjadi untuk seluruh negara atau wilayah tujuan utama. Bahkan di negara tertentu, seperti di Vietnam dan Australia proporsi wisatawan nasional laki-laki ini melebihi dua pertiga dari seluruh perjalanan wisnas yang ke sana. Hanya negara tujuan Turki saja yang hampir seimbang antara wisatawan nasional laki-laki dan perempuan.

**Grafik 3.1. Distribusi Perjalanan Wisatawan Nasional menurut Jenis Kelamin dan Tujuan Perjalanan (persen), 2022**

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

## Kelompok Umur dan Pekerjaan Utama Wisatawan Nasional

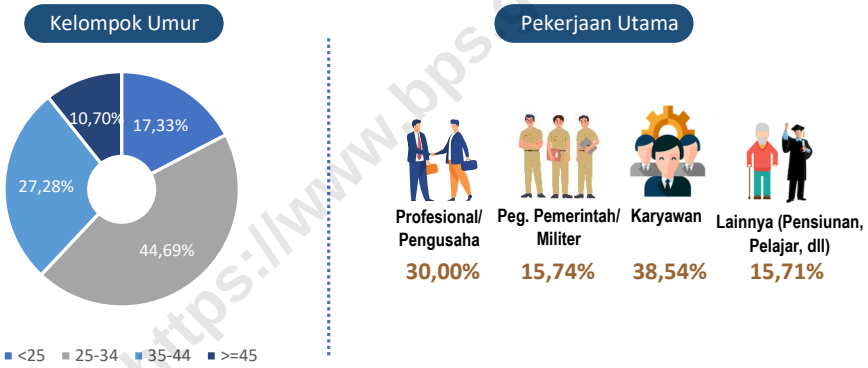

*"Mayoritas wisatawan nasional berumur 25-44 tahun."*

Selain jenis kelamin, umur juga membawa pengaruh yang cukup signifikan dalam melakukan perjalanan ke luar negeri. Di tahun 2022, mayoritas perjalanan wisatawan nasional dilakukan oleh wisatawan yang berusia 25-44 tahun (sekitar 72 persen). Tidak heran bahwa di usia ini merupakan usia produktif yang cenderung memiliki mobilitas tinggi.

Di sisi lain, persentase wisatawan nasional terkecil ada pada wisatawan yang berusia 45 tahun ke atas. Pada umumnya, semakin bertambah umur seseorang maka imunitasnya semakin menurun. Terlebih lagi, penduduk usia yang lebih tua memiliki tingkat kerentanan yang lebih tinggi dalam menghadapi virus Covid-19 sehingga menimbukan kekhawatiran untuk bepergian jauh. Hal ini dan juga situasi di masa pandemi yang membuat pemerintah menetapkan batasan usia maksimal 65 tahun bagi calon jamaah haji untuk menunaikan ibadah haji di tahun 2022.

Secara umum, hampir 39 persen wisatawan nasional memiliki pekerjaan utama sebagai karyawan. Namun jika dilihat di negara tujuan tertentu, seperti Australia, Inggris, atau Jerman, mayoritas wisatawan nasional yang berkunjung adalah wisatawan yang bekerja sebagai profesional atau pengusaha. Biasanya perjalanan yang bertujuan bisnis didominasi oleh kedua kelompok pekerjaan utama tersebut.

**Grafik 3.2. Distribusi Perjalanan Wisnas menurut Kelompok Umur dan Pekerjaan Utama (persen), 2022**

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

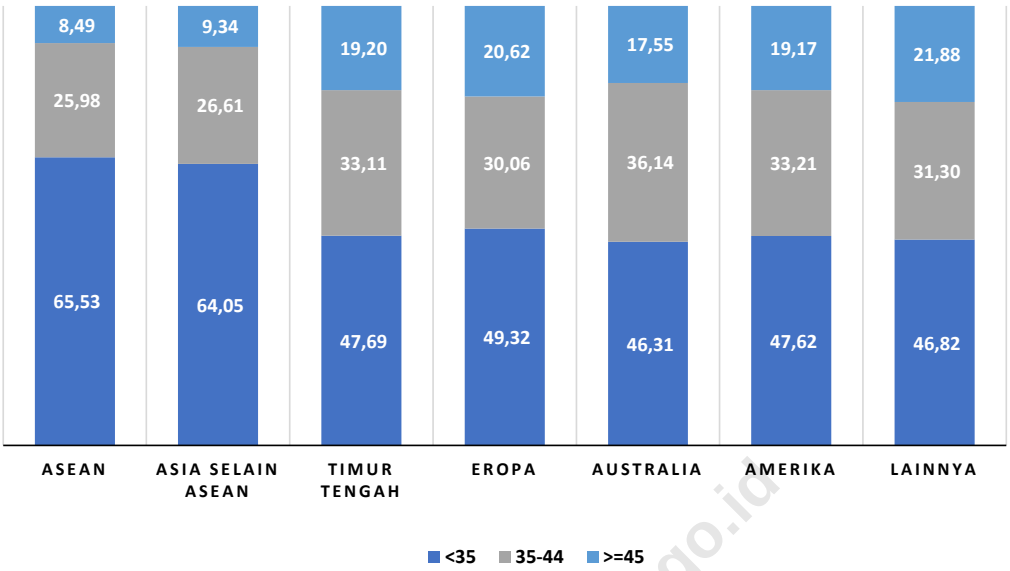

*"Wisatawan nasional ke negara-negara Asia cenderung berusia lebih muda."*

Dari karakteristik umur juga terlihat ada perbedaan antara wisatawan nasional tujuan Asia (termasuk ASEAN) dibandingkan tujuan negara lain. Umur wisatawan tujuan negara Asia relatif lebih muda. Kurang dari 10 persen wisatawan mengunjungi Malaysia, Singapura atau negara-negara Asia yang berumur 45 tahun ke atas. Persentase kelompok ini pada negara tujuan Timur Tengah, Amerika, Australia maupun negara Eropa mencapai kurang lebih 20 persen.

Karakteristik umur ini mungkin juga berkaitan dengan tujuan perjalanan. Wisatawan nasional ke Amerika, Eropa dan Australia memiliki proporsi yang relatif lebih besar untuk tujuan bisnis. Jika umur pelaku perjalanan tujuan bisnis relatif lebih tua dapat dipahami karena karakteristik umur akan berhubungan dengan karakteristik pekerjaannya. Semakin tua semakin besar peluangnya untuk memiliki posisi tinggi dalam pekerjaan.

https://www.bps.go.id

Grafik 3.3. Distribusi Wisatawan Nasional menurut Kawasan Negara Tujuan dan Umur (persen), 2022

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

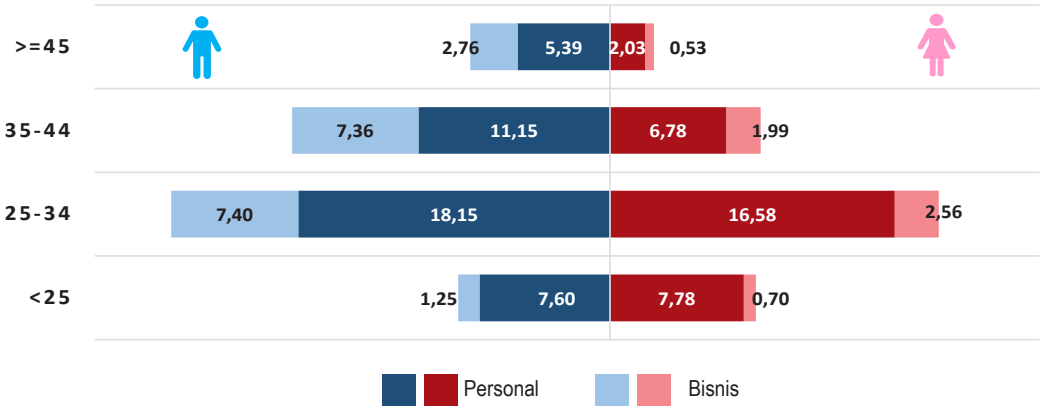

Sementara untuk wisatawan nasional ke Timur Tengah yang sebagian besar memiliki tujuan ibadah juga lebih tua struktur umurnya. Data ini bisa dipahami mengingat bahwa pelaksana haji maupun umrah pada umumnya juga berusia tua. Pada wisatawan tujuan negara ASEAN dan Asia relatif berusia lebih muda, lebih dari 60 persen berusia kurang dari 35 tahun. Hal ini mungkin disebabkan oleh dominasi tujuan personal di negara wilayah ASEAN dan Asia. Dari struktur umurnya, wisatawan nasional yang memiliki tujuan personal cenderung lebih muda dari pada yang melakukan perjalanan untuk bisnis.

*"Wisatawan Nasional mayoritas memiliki tujuan personal pada semua kelompok umur."*

Pola sebaran perjalanan menurut kelompok umur dan tujuan utama perjalanan terlihat identik untuk wisatawan nasional laki-laki dan perempuan. Dari seluruh perjalanan wisatawan nasional, proporsi yang berusia 25-34 tahun merupakan persentase terbesar, sedangkan wisatawan nasional yang berusia 45 tahun ke atas merupakan persentase terkecil. Dari segi tujuan perjalanan, tujuan personal terlihat mendominasi baik di semua jenis kelamin maupun kelompok umur. Lebih rinci lagi, pola sebaran menurut kelompok umur juga sama untuk tujuan personal dan bisnis. Dari sini dapat terlihat bahwa proporsi terbesar perjalanan dilakukan oleh wisatawan nasional berusia 25-34 tahun dan memiliki tujuan personal/pribadi.

https://www.bps.go.id

Grafik 3.4. Distribusi Wisatawan Nasional berdasarkan Jenis Kelamin, Kelompok Umur dan Tujuan Utama Perjalanan (persen), 2022

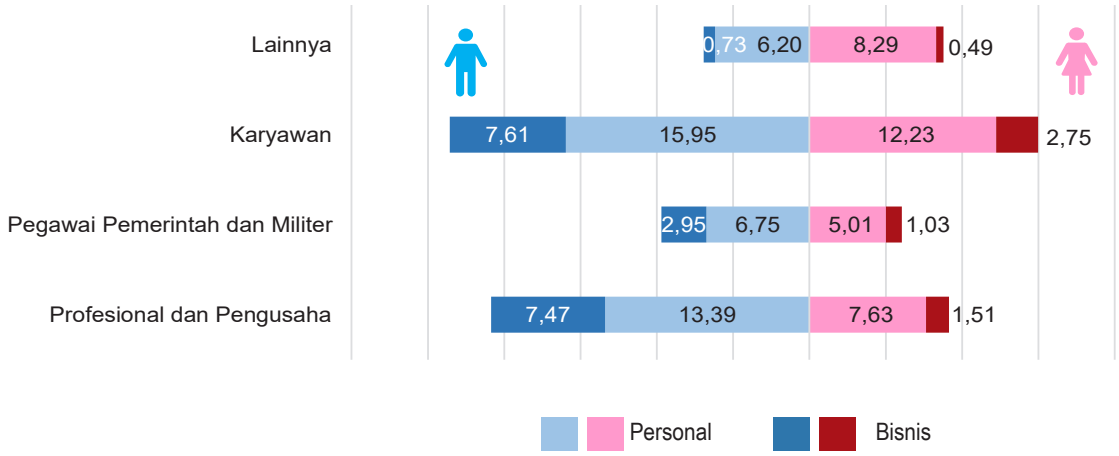

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

*"Perjalanan untuk tujuan bisnis didominasi oleh wisatawan nasional laki laki dan bekerja sebagai professional, pengusaha atau karyawan."*

Dari segi pekerjaan utama, sebagian besar perjalanan dilakukan oleh wisatawan nasional yang bekerja sebagai karyawan, diikuti oleh mereka yang bekerja sebagai profesional dan pengusaha baik laki-laki maupun perempuan. Tujuan personal juga masih mendominasi di semua jenis pekerjaan. Dapat disimpulkan bahwa sebagian besar perjalanan wisatawan nasional dilakukan oleh laki-laki yang bekerja sebagai karyawan dan maksud perjalanannya untuk tujuan personal.

Grafik 3.5. Distribusi Wisatawan Nasional berdasarkan Jenis Kelamin, Pekerjaan Utama dan Tujuan Utama Perjalanan, 2022

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

https://www.bps.go.id

https://www.bps.go.id

# Karakteristik Pengeluaran Wisatawan Nasional

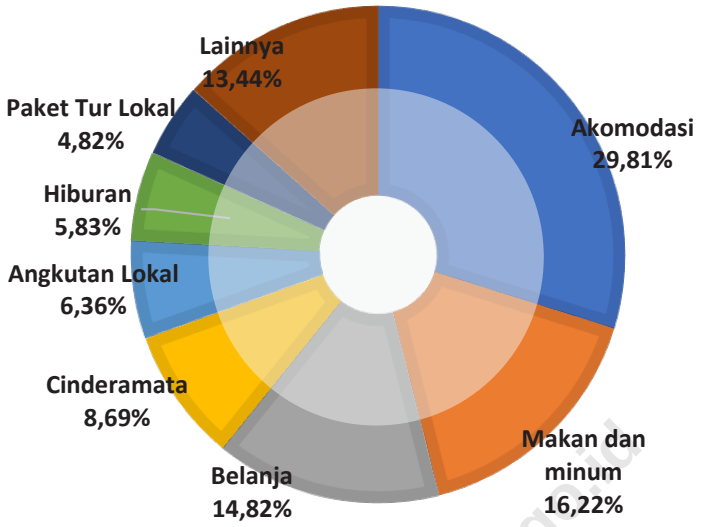

*ilustrasi: storyset.com*

Perjalanan wisatawan ke luar negeri sedikit mendapat perhatian di Indonesia. Hal ini karena devisa yang semakin banyak ke luar jika semakin banyak penduduk Indonesia yang bepergian ke luar negeri. Namun di sisi lain, memahami perilaku pengeluaran wisnas sangat penting untuk membantu dalam mengembangkan strategi pariwisata di dalam negeri dan juga memungkinkan pemerintah untuk membuat keputusan yang lebih tepat.

> *"Pengeluaran untuk akomodasi menempati urutan pertama dari total pengeluaran."*

Hasil dari survei digital diperoleh bahwa rata-rata pengeluaran wisatawan nasional tahun 2022 sebesar US$2.646,53. Sekitar 60 persen total pengeluaran wisnas digunakan untuk akomodasi (29,81 persen), makan dan minum (16,22 persen) serta belanja untuk keperluan pribadi (14,82 persen). Selebihnya, 40 persen pengeluaran digunakan untuk berbagai jenis pengeluaran seperti keperluan kesehatan, hiburan, angkutan lokal dan lain-lain.

Grafik 4.1. Distribusi Pengeluaran Wisatawan Nasional menurut Jenis Pengeluaran (persen), 2022

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

https://www.bps.go.id

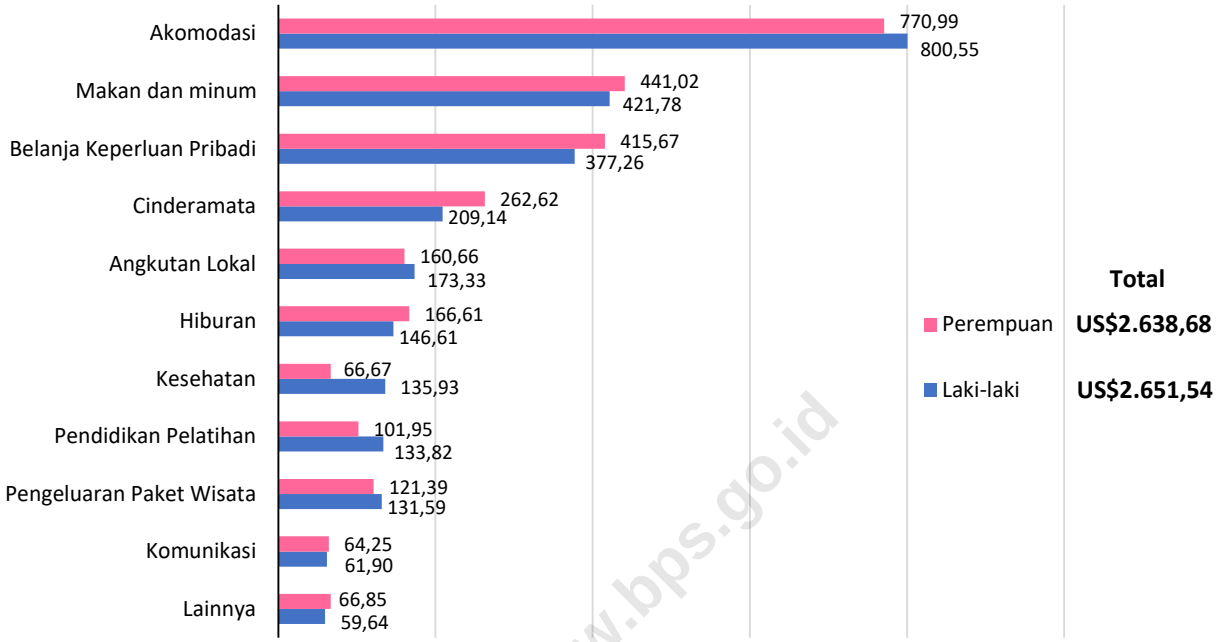

## Pengeluaran Berdasarkan Karakteristik Sosial-Ekonomi

*"Secara umum wisatawan nasional laki-laki dan perempuan tidak memiliki rata-rata pengeluaran yang jauh berbeda."*

Berdasarkan karakteristik sosial ekonomi terlihat bahwa jenis kelamin tidak menjadi penentu besarnya total pengeluaran wisnas. Data survei digital mengungkap bahwa pengeluaran wisatawan nasional laki-laki sedikit lebih tinggi dibandingkan perempuan meskipun tidak jauh berbeda. Perbedaan ini dimungkinkan karena laki-laki dan perempuan memiliki jenis pengeluaran yang berbeda disebabkan preferensi yang berbeda.

Jika dirinci menurut jenis pengeluaran, wisatawan perempuan cenderung membelanjakan lebih banyak untuk makan minum, belanja keperluan pribadi, cinderamata, dan hiburan. Hal ini sesuai dengan penelitian yang dilakukan oleh Matalas, Panaretos, Tzoutzou, & Lazaridis (2023) yang menyimpulkan bahwa wisatawan perempuan lebih termotivasi untuk mencicipi makanan lokal dan juga makan di restoran atau rumah makan yang relatif lebih berkualitas sehingga membuat pengeluaran untuk makanan menjadi lebih tinggi. Selain itu, wisatawan perempuan juga ingin melihat banyak tempat dan menghabiskan lebih banyak untuk membeli berbagai barang dan makan makanan yang berbeda selama kunjungan mereka.

Grafik 4.2. Rata-rata Pengeluaran Wisatawan Nasional menurut Jenis Pengeluaran dan Jenis Kelamin (USD), 2022

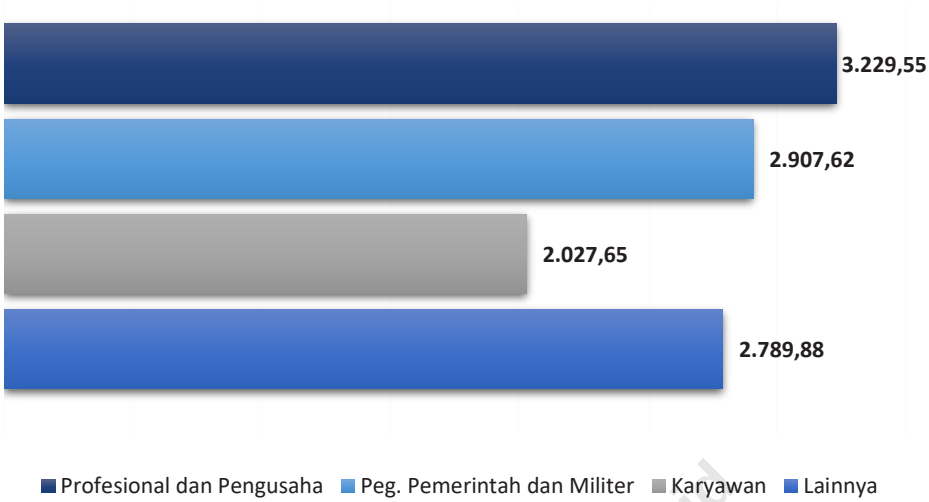

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

https://www.bps.go.id

*"Profesional, pengusaha, pegawai pemerintah dan militer cenderung memiliki total pengeluaran yang lebih besar."*

Sebaliknya status pekerjaan cukup memberikan pengaruh dalam penentuan total pengeluaran wisatawan nasional. Data survei digital menunjukkan bahwa profesional, pengusaha, pegawai pemerintah dan militer cenderung memiliki total pengeluaran yang lebih besar. Kondisi ini dapat disebabkan oleh kecenderungan bahwa pegawai pemerintah dan militer melakukan perjalanan untuk tujuan bisnis dengan tingkat pengeluaran yang besar. Sedangkan kelompok pengusaha dan profesional dapat terjelaskan dari kemampuan daya belinya yang tinggi sehingga baik untuk tujuan personal maupun bisnis pengeluaran perjalanannya relatif tinggi.

Grafik 4.3. Rata-rata Pengeluaran Wisatawan Nasional menurut Kelompok Umur dan Pekerjaan Utama (USD), 2022

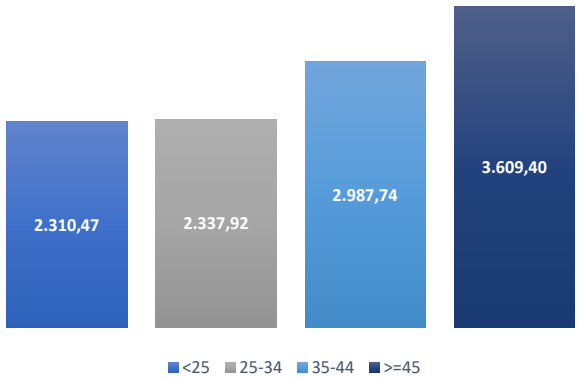

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

*"Semakin tua pelaku perjalanan wisatawan nasional maka total pengeluarannya juga semakin tinggi."*

Demikian juga umur wisatawan nasional terlihat memengaruhi total pengeluaran. Semakin tua usia wisatawan nasional, maka pengeluaran juga cenderung lebih tinggi. Data secara konsisten menunjukkan bahwa wisnas diusia > 45 tahun cenderung memiliki pengeluaran yang lebih tinggi dibandingkan kelompok umur lainnya untuk semua status pekerjaan kecuali pegawai pemerintah dan militer. Kondisi ini menggambarkan bahwa daya beli kelompok ini yang relatif baik atau mapan secara ekonomi.

Grafik 4.4. Rata-rata Pengeluaran Wisatawan Nasional menurut Kelompok

Sumber: Survei Digital Wisatawan Nasional 2022, BPS

https://www.bps.go.id

## Pengeluaran Berdasarkan Karakteristik Perjalanan

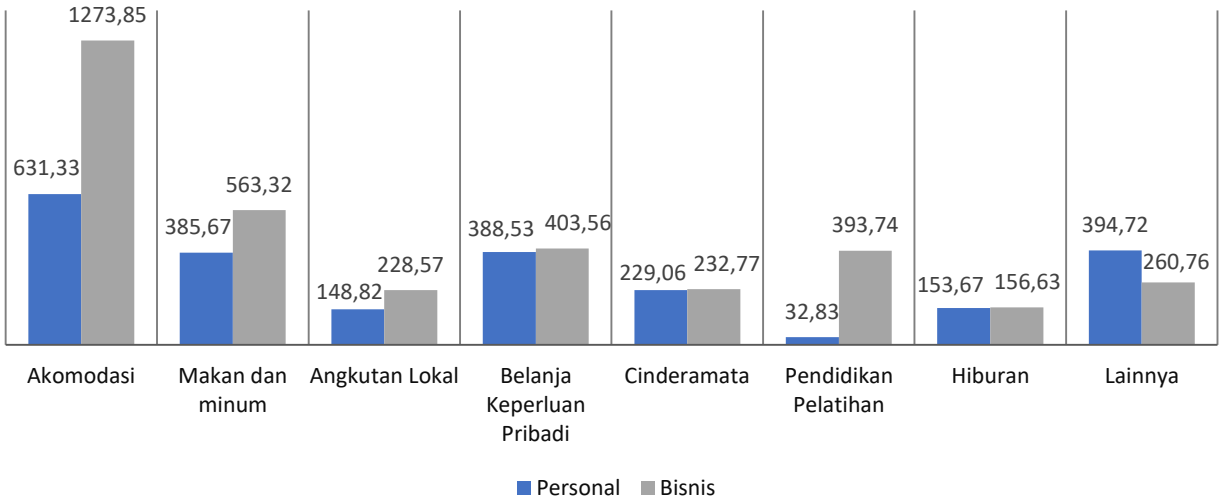

Selanjutnya rata-rata pengeluaran wisnas juga bervariasi menurut negara tujuan. Beberapa alasan dapat menjadi penyebab besarnya pengeluaran di suatu negara. Salah satu karakteristik yang berkaitan erat adalah lamanya tinggal wisatawan nasional. Hal ini karena pengeluaran untuk akomodasi dan makan minum yang berbanding lurus dengan lamanya tinggal. Jadi, semakin lamanya tinggal di negara tujuan, maka total pengeluaran pun semakin besar.

Di tahun 2022, Inggris menjadi negara tujuan dengan rata-rata pengeluaran wisnas paling besar, yaitu sekitar US$19.353,18. Hal ini cukup masuk akal melihat rata-rata lama tinggal di Inggris yang mencapai 62 malam dibandingkan rata-rata lama tinggal secara total yang hanya 11 malam saja. Di sisi lain, Singapura dan Malaysia menjadi negara tujuan dengan pengeluaran rendah, masing-masing sebesar US$1.008,78 dan US$1.418,78. Tidak heran karena rata-rata lama ringgal di negara tersebut hanya sekitar 4 hari dan 9 hari.

Dari sisi tujuan perjalanan, pengeluaran untuk tujuan bisnis jauh (US$3.513,20) lebih besar dibandingkan dengan pengeluaran untuk tujuan personal (US$2.364,62). Perjalanan dengan tujuan bisnis kerap dihubungkan dengan menginap di akomodasi berbintang yang mahal bahkan mewah, makan di restoran ternama atau pertemuan (MICE) di gedung yang terkenal. Semua ini mengarah pada pelayanan, kenyamanan, dan fasilitas yang mendukung lancarnya perjalanan bisnis tersebut. Pada tujuan personal, sebagian orang tidak melakukan hal tersebut bahkan cenderung menghemat. Menginap di hotel yang terjangkau seperti budget hotel, membawa makanan dari Indonesia, menggunakan transportasi umum, dan sebagainya sehingga pengeluaran pun tidak sebesar perjalanan bisnis.

https://www.bps.go.id

# Dampak Covid-19 terhadap Wisatawan Nasional

*ilustrasi: storyset.com*

Sektor pariwisata nasional dan global mulai pulih pada tahun 2022 seiring melandainya kasus Covid-19 dan pelonggaran pembatasan perjalanan. Jumlah kedatangan turis internasional di seluruh dunia meningkat dua kali lipat dibandingkan tahun sebelumnya, yaitu mencapai 917 juta (Statista Research Department, 2023). Meskipun demikian, angkanya masih rendah 37 persen dibandingkan tahun 2019.

Tren yang sama terjadi pada jumah perjalanan wisatawan nasional. Pada tahun 2022, jumlah perjalanan wisatawan nasional mencapai 3,5 juta perjalanan atau tumbuh lebih dari 100 persen dibandingkan periode sebelumnya. Namun angka ini masih lebih rendah 70 persen dibandingkan sebelum pandemi Covid-19 (tahun 2019). Rata-rata pengeluaran per perjalanan wisatawan nasional juga meningkat sangat signifikan dibandingkan sebelum dan awal pandemi. Rata-rata pengeluaran per perjalanan pada tahun 2022 mencapai US$2.646,53, sedikit lebih tinggi dari tahun sebelumnya sebesar US$2.437. Sedangkan rata-rata pengeluaran per perjalanan pada tahun 2019 dan 2020 masing-masing sebesar US$927,69 dan US$938,14 per perjalanan.

Untuk mengidentifikasi dampak Covid-19 terhadap statistik wisatawan nasional, analisis data dibedakan dalam tiga golongan. Tahun 2019 merepresentasikan kondisi sebelum Covid-19 sedangkan tahun 2020-2021 mewakili kondisi selama Covid-19. Tahun 2022 dimana perbaikan kondisi terjadi maka dikategorikan sebagai masa pemulihan Covid-19.

https://www.bps.go.id

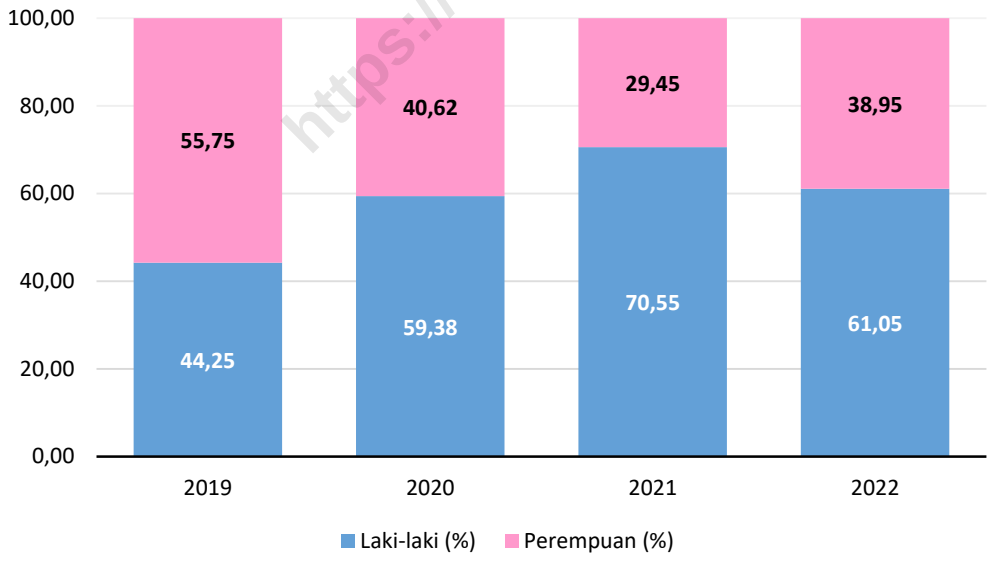

## Karakteristik Wisatawan Nasional Sebelum, Selama, dan Masa Pemulihan Pandemi Covid-19

*"Perjalanan wisatawan nasional didominasi laki-laki pada masa pandemi, hal yang sebaliknya dibandingkan sebelum pandemi."*

Pada tahun 2019 ketika kondisi normal sebelum adanya pandemi Covid-19, jumlah perjalanan wisata ke luar negeri yang dilakukan oleh penduduk Indonesia mencapai 11,69 juta perjalanan. Mayoritas merupakan wisatawan nasional berjenis kelamin perempuan dengan persentase mencapai 55,75 pesen. Hal sebaliknya terjadi ketika merebaknya kasus Covid-19. Wisatawan nasional semakin lebih didominasi oleh laki-laki pada tahun 2020 dengan proporsi mencapai 59,38 persen. Pada tahun 2021, proporsi wisatawan nasional laki-laki mencapai 77,27 persen. Namun demikian, data tersebut merupakan profil wisatawan nasional dan tidak menggambarkan populasi. Persentase wisatawan nasional laki-laki pada tahun 2022 kembali meningkat dibandingkan tahun 2020, yaitu mencapai 61,05 persen.

https://www.bps.go.id

**Grafik 5.1. Distribusi Perjalanan Wisatawan Nasional menurut Jenis Kelamin (persen), 2019-2022**

Catatan: *) Data tahun 2021 merupakan angka profil dan tidak menggambarkan populasi.

*"Proporsi negara tujuan utama perjalanan wisatawan nasional ke kawasan Eropa dan Amerika meningkat signifikan."*

Hal yang menarik pada masa pemulihan pandemi Covid-19 adalah meningkatnya proporsi perjalanan wisatawan nasional ke Kawasan Eropa dan Amerika. Proporsi perjalanan wisnas di tahun 2022 pada kedua kawasan tersebut meningkat lebih dari tiga kali lipat dibandingkan sebelum pandemi. Masing-masing mencapai 8,94 persen dan 3,35 persen. Sebaliknya perjalanan ke kawasan ASEAN proporsinya cenderung menurun setiap tahunnya meskipun masih menjadi tujuan utama sebagian besar perjalanan wisnas.

Berdasarkan negara, Arab Saudi merupakan tujuan utama perjalanan wisnas pada tahun 2022 yang mencapai 19,21 persen. Hal ini meningkatkan proporsi kawasan timur tengah dari 12,16 persen pada tahun 2019 menjadi 27,24 persen pada tahun 2022. Malaysia merupakan negara kedua terbesar tujuan utama perjalanan wisnas meskipun pada saat sebelum pandemi menjadi tujuan mayoritas perjalanan wisnas yang mencapai 38,87 persen. Selanjutnya adalah Singapura dengan proporsi mencapai 18,05 persen.

Tiongkok menjadi episentrum penyebaran wabah Covid-19. Isolasi ketat yang dilakukan Pemerintah Tiongkok membuat negara tersebut kian terisolir sehingga perjalanan ke negara tersebut merosot. Distribusi perjalanan wisnas ke Tiongkok merosot menjadi 0,73 persen pada tahun 2022, jauh menurun dibandingkan sebelum pandemi yang mencapai 4,09 persen.

https://www.bps.go.id

*"Rata-rata lama perjalanan wisatawan nasional menjadi lebih lama dua kali lipat pasca pandemi."*

Perjalanan wisatawan Indonesia ke luar negeri jauh lebih lama dibandingkan sebelum pandemi. Rata-rata lama perjalanan ke luar negeri masing-masing mencapai 7,79 hari dan 8,43 hari pada tahun 2020 dan 2021. Tren peningkatan rata-rata lama perjalanan wisnas berlanjut pada tahun 2022 yang mencapai 10,75 hari. Sedangkan sebelum pandemi pada tahun 2019, rata-rata lama perjalanannya hanya 4,58 hari. Tujuan perjalanan wisnas dengan rata-rata lama perjalanan terlama yaitu kawasan Amerika (39,55 hari) dan Eropa (33,47 hari).

*"Provinsi-provinsi di Pulau Jawa kembali mendominasi asal pelaku perjalanan wisatawan nasional."*

Lebih dari separuh pelaku perjalanan wisatawan nasional pada tahun 2022 berdomisili di Pulau Jawa. Distribusinya meningkat dari 40,16 persen pada tahun 2019 menjadi 59,41 persen pada tahun 2022. Adanya pembatasan perjalanan berskala besar pada tahun 2020 hingga 2021 menyebabkan pelaku perjalanan wisnas yang berdomisili di Pulau Jawa sempat menurun proporsinya hingga hanya mencapai 7,69 persen pada tahun 2021. Pada saat itu perjalanan wisnas didominasi oleh pelaku perjalanan dari Nusa Tenggara Timur dan Kalimantan Barat yang

berbatasan darat langsung dengan wilayah luar negeri.

*"Mayoritas maksud utama perjalanan wisnas adalah berlibur/rekreasi, sedangkan pekerjaan utama dari wisnas adalah sebagai karyawan."*

Mayoritas maksud utama perjalanan wisnas adalah untuk berlibur/rekreasi yang mencapai 50,88 persen pada tahun 2022. Proporsinya meningkat dibandingkan sebelum pandemi (tahun 2019) yang hanya sebesar 45,24 persen. Sedangkan pekerjaan utama terbanyak wisnas adalah karyawan yang mencapai 38,54 persen pada tahun 2022, lebih tinggi dibandingkan sebelum pandemi (tahun 2019) sebesar 31,59 persen. Karakteristik wisnas berdasarkan maksud utama dan pekerjaan utama konsisten baik sebelum dan selama pandemi Covid-19.

## Karakteristik Pengeluaran Wisnas Sebelum, Selama, dan Masa Pemulihan Pandemi Covid-19

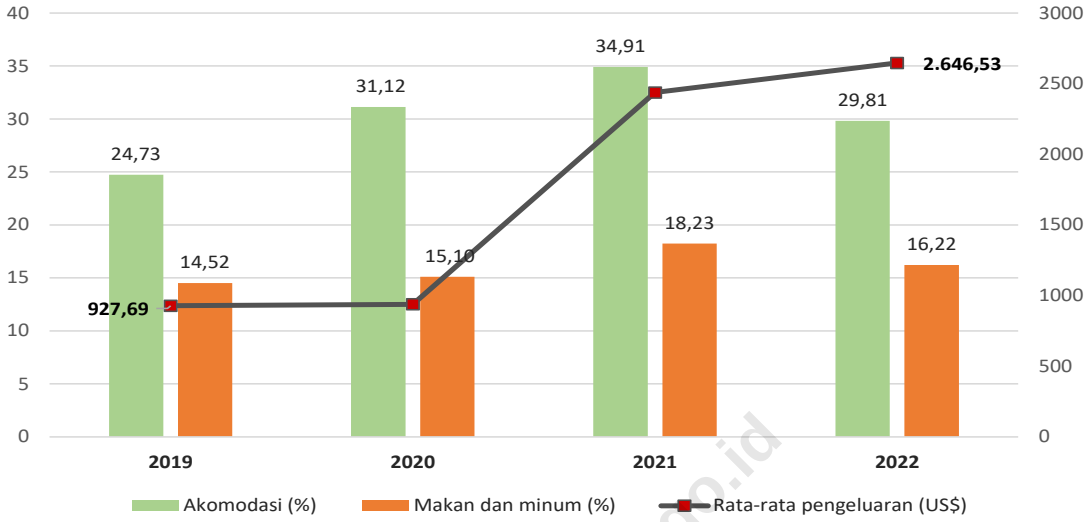

*"Secara umum pada masa pandemic dan pemulihan rata-rata pengeluaran per perjalanan lebih tinggi dibandingkan saat kondisi normal."*

Rata-rata pengeluaran dalam setiap perjalanan wisnas mengalami perubahan yang cukup signifikan pada waktu sebelum pandemi, selama pandemi dan masa pemulihan. Pada waktu sebelum pandemi (2019) rata-rata pengeluaran per perjalanan ada pada kisaran US$927,69 terlihat lebih rendah daripada pada tahun 2020 (US$938,14 US dolar). Sementara pada tahun 2021 ketika pandemi mencapai puncaknya, rata-rata pengeluaran per perjalanan meningkat pesat menjadi sekitar US$2.437. Peningkatan ini juga diiringi dengan kenaikan rata-rata lama perjalanan di sebagian besar negara tujuan. Kondisi ini cukup beralasan karena pada masa tersebut ada kewajiban untuk melakukan karantina terlebih dahulu pada saat datang di negara tujuan dan sebelum pergi dari negara tujuan.

Selanjutnya pada masa pemulihan pasca pandemi atau selama tahun 2022, rata-rata pengeluaran per perjalanan sedikit meningkat dibandingkan tahun sebelumnya. Jika dibandingkan rata-rata pengeluaran per perjalanan tahun 2022 dan tahun 2021 tidak banyak berbeda. Jadi dapat disarikan bahwa pengeluaran wisatawan menjadi meningkat pada masa pandemi.

https://www.bps.go.id

Grafik 5.2. Rata-rata Pengeluaran Wisatawan Nasional Per Perjalanan serta Proporsi Pengeluaran untuk Akomodasi, Makan dan minum, 2019-2022

Sumber: Survei Digital Wisatawan Nasional 2019 - 2022, BPS

*"Struktur Pengeluaran wisatawan nasional tidak banyak berbeda antara pada masa normal dan masa pandemi. "*

Akomodasi merupakan pengeluaran utama dari wisatawan nasional. Secara konsisten keperluan ini menjadi pengeluaran terbesar bagi pelaku perjalanan wisatawan nasional selama 2019-2022. Begitu juga dengan keperluan makan dan minum, walaupun tidak berada pada posisi yang sama tetapi selalu berada pada lima besar keperluan utama wisatawan nasional. Secara umum pengeluaran akomodasi serta makan dan minum berkontribusi pada 40-50 persen total pengeluaran wisatawan nasional. Selanjutnya keperluan pribadi dan cinderamata juga sering keluar sebagai lima jenis pengeluaran wisatawan selama 2019-2022.

Hal yang menarik adalah pengeluaran kesehatan dan angkutan lokal, Sebelum pandemi perjalanan keluar negeri untuk tujuan kesehatan seperti pengobatan cukup banyak dilakukan. Namum ketika pandemi terjadi dunia medis fokus pada penanganan Covid-19 serta pembatasan mobilitas menstimulasi berkurangnya perjalanan untuk tujuan pengobatan atau tindakan kesehatan lainnya, sehingga pengeluaran kesehatan keluar dari lima pengeluaran utama saat pandemi. Sebaliknya pengeluaran transportasi lokal proporsinya menjadi cukup besar dan masuk dalam lima pengeluaran utama saat pandemi. Kondisi ini mungkin disebabkan pembatasan penerbangan saat pandemi menjadikan perjalanan wisnas didominasi oleh penggunaan angkutan darat atau laut. Jadi besar peluangnya penggunaan angkutan lokal dalam perjalanan wisatawan nasional dan berakibat proporsi komponen pengeluaran ini cukup besar.

https://www.bps.go.id

Tabel 5.1. Lima Komponen Pengeluaran Utama Wisatawan Nasional, Tahun 2019-2022

| No | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|
| 1 | Akomodasi | Akomodasi | Akomodasi | Akomodasi |

## Daerah Asal Wisatawan Nasional Sebelum dan Selama Pandemi

Meminjam teori Gravity model dalam proses migrasi, perpindahan penduduk disebut akan dipengaruhi oleh jarak dan jumlah populasi. Jumlah populasi akan berbanding lurus dengan pelaku migrasi sedangkan jarak akan berbanding terbalik. Jadi semakin jauh jarak antara daerah asal dan daerah tujuan maka akan semakin kecil volume migrasi. Sebaliknya semakin besar penduduk daerah asal, maka akan menstimulasi volume migrasi yang semakin besar. Walaupun perjalanan wisata tidak dapat disamakan dengan migrasi yang bersifat permanen, namun sedikit banyaknya teori Gravity model dapat digunakan untuk menjelaskan fenomena perjalanan wisata nasional.

https://www.bps.go.id

Grafik 5.3. Distribusi Wisatawan Nasional berdasarkan Daerah Asal, 2019

Sumber: *Mobile Positioning Data*, BPS

Data daerah asal pelaku wisatawan nasional menunjukkan bahwa provinsi tertentu memberikan kontribusi yang cukup besar pada total jumlah wisatawan nasional karena beberapa faktor. Pertama, besarnya populasi atau jumlah penduduk provinsi tersebut. Data tahun 2019 memperlihatkan bahwa Jawa Barat, Jawa Timur, DKI Jakarta, dan Sumatera Utara merupakan provinsi yang memberikan kontribusi cukup besar pada total jumlah wisatawan nasional. Kedua, aspek jarak yang dekat dengan daerah tujuan. Hal ini bisa diidentifikasi berdasarkan lokasi provinsi yang memiliki perbatasan langsung dengan negara lain. Data 2019, menunjukkan bahwa Kepulauan Riau, Nusa Tenggara Timur, Kalimantan Barat, dan Kalimantan Utara merupakan daerah asal wisatawan nasional yang cukup besar. Ketiga, ketersediaan fasilitas seperti bandara dan penerbangan langsung ke luar negri juga menjadi pendorong besarnya kontribusi pada total jumlah wisatawan nasional. Hal ini terilustasi dari besarnya kontribusi DKI, Sumatera Utara, Riau, dan Banten pada total jumlah wisatawan nasional.

Selanjutnya tidak diragukan bahwa pandemi membawa perubahan yang besar dalam industri pariwisata. Pembatasan perjalanan dan berbagai kendala yang terjadi selama pandemi bukan hanya mengubah jumlah wisatawan nasional, tetapi juga menentukan karakteristik wisatawan nasional, salah satunya adalah daerah asal pelaku perjalanan. Secara umum dapat disarikan bahwa saat terjadi pandemi jarak memberikan pengaruh besar dalam menentukan jumlah pelaku perjalanan. Hal ini disebabkan karena pembatasan penerbangan sehingga pelaku perjalanan akan tergantung pada moda transportasi darat atau laut. Data tahun 2021 dimana pandemi sedang berada puncaknya maka sebagian besar pelaku perjalanan wisnas berasal dari Kalimantan Barat, Kalimantan Utara, Nusa Tenggara Timur, dan Kepulauan Riau.

# Catatan Teknis

**Sumber data**

Publikasi Statistik Wisatawan Nasional 2022 akan memuat informasi tentang jumlah perjalanan ke luar negeri (wisatawan nasional), negara tujuan, lamanya melakukan perjalanan, maksud perjalanan, dan rata-rata pengeluaran. Informasi-informasi tersebut diperoleh berdasarkan 3 (tiga) sumber data, yaitu data administrasi milik Direktorat Jenderal Imigrasi Kementerian Hukum dan HAM (Ditjen Imigrasi Kemenkumham), *Mobile Positioning Data* (MPD), dan survei digital Wisatawan Nasional.

### ■ Ditjen Imigrasi Kemenkumham

Data dari Ditjen Imigrasi Kemenkumham merupakan sumber data utama jumlah wisatawan nasional. Data ini berupa laporan bulanan perlintasan Warga Negara Indonesia (WNI) di pintu masuk internasional bandara/pelabuhan/pos lintas batas di Indonesia. Konsep penghitungan jumlah wisnas dapat dilihat dari bagan berikut:

Data yang dihasilkan dari pengolahan tersebut meliputi jumlah wisnas menurut bulan dan pintu kedatangan. Salah satu kekurangan dari data ini adalah tidak ada informasi mengenai negara tujuan pada perjalanannya sehingga data tidak dapat disajikan hingga level negara tujuan. Informasi tersebut diperlukan untuk mengetahui negara partner dari impor jasa di Indonesia.

https://www.bps.go.id

### ■ Mobile Positioning Data

BPS juga menggunakan MPD untuk melengkapi jumlah wisatawan nasional di wilayah perbatasan yang tidak ada pemeriksaan imigrasi. Data MPD wisnas perbatasan ini diperoleh melalui Kementarian Pariwisata dan Ekonomi Kreatif. Namun sejak tahun 2022, MPD wisnas perbatasan dari Kemenparekraf dihentikan karena sudah ada MPD yang dihasilkan oleh BPS.

Penggunaan MPD merupakah salah satu solusi untuk mendapatkan data negara tujuan wisnas karena pergerakan telepon seluler wisnas dapat terdeteksi di negara tujuan. Untuk menjaga kerahasiaan data pribadi, nomor pelanggan operator selular dienkripsi menjadi sebuah kombinasi angka dan karakter unik dengan fungsi satu arah. Mekanisme ini menjamin bahwa analisis pergerakan pelanggan yang dilakukan tidak melanggar kaidah privasi.

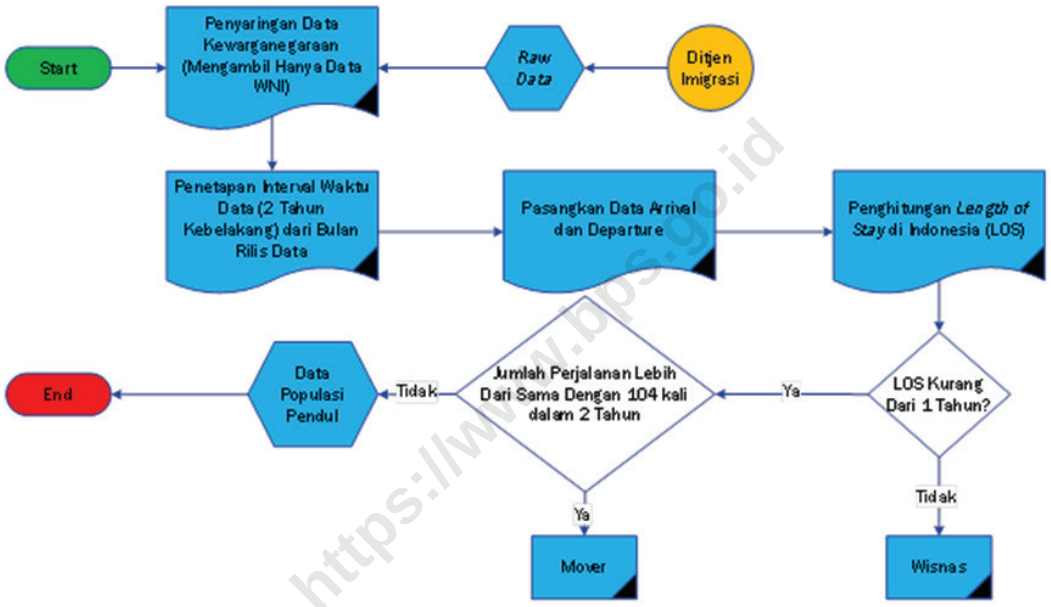

Tahapan yang dilakukan untuk memperoleh data wisatawan nasional dari MPD mengikuti alur sebagai berikut:

1. Penyaringan terhadap pelanggan yang memiliki home di Indonesia untuk memastikan bahwa

pelanggan tersebut adalah penduduk Indonesia. Penentuan home ini menggunakan algoritma AMDA berdasarkan data amatan sekurang-kurangnya pada periode selama 12 bulan terakhir.

2. Selanjutnya dilakukan pembersihan data, yaitu mengeluarkan data domestik (pergerakan di Indonesia) diantara rangkaian perjalanan wisnas di luar negeri, mengeluarkan data negara lain di antara perjalanan satu negara, mengeluarkan perjalanan di suatu negara kurang dari 6 jam, dan mengeluarkan perjalanan yang tidak diawali dari Indonesia dan diakhiri di Indonesia.
3. Penentuan titik keberangkatan (departure) dan kedatangan (arrival) di level kabupaten, dan

**Gambar 6.1. Konsep Penentuan Wisatawan Nasional**

penghapusan data domestik selain di titik keberangkatan dan kedatangan.

4. Penyatuan perjalanan negara yang berurutan dan penentuan ulang titik keberangkatan dan kedatangan di masing-masing perjalanan.
5. Penyaringan perjalanan yang kurang dari 365 hari.
6. Setelah mendapatkan data perjalanan WNI ke luar negeri secara utuh, dilakukan penggabungan data home (tempat tinggal), titik paling akhir sebelum ke luar negeri (arrival), dan titik paling awal di Indonesia setelah dari luar negeri (departure).
7. Penentuan negara tujuan utama (main destination), negara tujuan berikutnya (secondary destination), dan negara transit.

Dari MPD didapatkan data jumlah perjalanan ke luar negeri menurut negara tujuan, kota/ kabupaten tempat tinggal, kota/kabupaten keberangkatan, kota/ kabupaten kedatangan, dan lamanya perjalanan, sedangkan maksud perjalanan, serta pengeluaran sebelum, selama, dan setelah melakukan perjalanan serta profil lainnya diperoleh melalui survei digital.

https://www.bps.go.id

### Survei digital

Survei Digital Wisatawan Nasional adalah survei digital terhadap sampel pengguna seluler yang teridentifikasi sebagai wisatawan nasional (penduduk Indonesia yang telah melakukan perjalanan ke luar negeri). Pengidentifikasian wisatawan nasional dilakukan berdasarkan hasil profiling MPD dengan mengikuti tahapan di atas.

Survei digital dilaksanakan dengan menggunakan platform survei digital milik BPS. Survei ini ditanyakan kepada responden yang melakukan perjalanan ke luar selama tahun 2022 dengan jumlah sampel sebanyak 7.517 responden. SMS blast yang berisi tautan survei dikirimkan kepada responden terpilih dengan tetap memperhatikan proporsi negara tujuan Data yang dikumpulkan dalam survei digital meliputi:

- Karakteristik Sosial-Ekonomi, yaitu data mengenai karakteristik demografi dan status ekonomi penduduk Indonesia yang melakukan ke luar negeri (umur, jenis kelamin, dan pekerjaan utama).
- Karakteristik perjalanan, yaitu data mengenai keterangan perjalanan penduduk Indonesia yang melakukan ke luar negeri, sejak keberangkatan sampai dengan kembali ke tempat tinggal semula. Variable yang dikumpulkan antara lain tujuan utama ke luar negeri, negara tujuan, dan lama bepergian.
- Pola pengeluaran, yaitu seluruh pengeluaran penduduk Indonesia yang melakukan ke luar negeri, mulai dari persiapan terkait perjalanan, selama di luar negeri, sampai kembali ke tempat tinggal semula.

## Introduction

Recent decades have shown that national boundaries are increasingly blurred due to the impact of globalization. Globalization is defined as the intensification of connections between countries, leading to the formation of an established structure of relations between countries and global integration in all aspects of life such as culture, economy, ecology, politics, social, and technology. Globalization may have both positive and negative impacts, but in general, the benefits dominate the discussion.

Based on the importance of globalization in influencing socio-economic life, several institutions attempt to measure the level and changes of globalization. It aims to determine disparities between regions and their influence on the dynamics of social, economic, and political life. Measures that are often used as benchmarks are the Maastricht Globalization Index (MGI) and the KOF Globalization Index (KOFGI). Both indices generally cover similar dimensions in measuring globalization. MGI uses political, economic, socio-cultural, ecological, and technological dimensions in identifying the concept of globalization. Meanwhile, KOFGI uses the dimensions of trade, finance, interpersonal, information, culture, and politics to describe globalization comprehensively.

The use of international tourism as one of the factors included in the two indices above to determine globalization is interesting. In addition to the movement of goods and services, the

movement of individuals across national borders is undeniably one of the determinants of the level of globalization. Individual movements, including tourism, are allegedly able to encourage the exchange of goods and services as well as cross-country cultural acculturation. In other words, tourism has become a driving factor in globalization.

Globalization and tourism are interrelated. Various facilities, as a result of globalization, have become stimulants for traveling. Globalization in trade encourages easier exchange of goods so that specific products of a country are easy to find in tourist destinations. The openness of financial services, such as international banking, makes transactions easier to carry out. Likewise, cultural acculturation as a result of openness provides flexibility to accept cultural differences so that the tourism industry is more developed.

Based on the theory of migration, there are many driving factors for travel related to globalization. Among the many driving factors, well-established economic conditions remain one of the main factors that stimulate individuals to travel. Financial capacity is necessary for accessing transportation, using accommodation services, and covering all expenses incurred during travel. Therefore, it is not wrong if the number of tourist trips can be used as an indicator for economic performance. For tourist destinations, this is able to provide income through various consumption transactions of goods and services. Meanwhile, for tourist originating areas, it indicates economic stability that allows the population to meet tertiary needs.

## Concept and Definition of Outbound Tourism

In International Recommendations for Tourism Statistics (IRTS) 2008, tourism refers to the activity of visitors.

- A visitor is a traveller taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure or other personal purpose) other than to be employed by a resident entity in the country or place visited. This scope is much wider than the traditional perception of tourists, which includes only those travelling for leisure.
- Indonesian residents are all people who have been domiciled in the geographical area of the Republic of Indonesia for one year or more, or those who have been domiciled for less than one year but aim to settle down.
- From the above concept, outbound visitors are defined as Indonesian residents who travel abroad outside their usual environment of residence with a length of travel of not more than one year; the trip is intended for vacation, business, or other purposes and not to be employed by a resident entity (person or company) in the country visited.

## Outbound Tourism and Economic Conditions

*"In 2022, outbound trips show an increase after a sharp decline in 2020 and 2021."*

Empirical studies in the case of China found that outbound tourism, international trade, and economic growth are related. Likewise, analysis of Mexican data identified a negative relationship between the Compensated Misery Index (CMI) and the number of outbound trips (Sanchez Lopez, 2022). The higher the CMI, the smaller the number of outbound trips. CMI is a composite index describing social welfare, where the higher the index, the lower ability to access tertiary needs. CMI itself is formed from the unemployment rate, inflation rate, and GDP growth. The study shows that there is a link between economic conditions and the number of outbound trips because the potential of individuals to travel will be influenced by their financial capacity, which is one of the driving factors.

The Covid-19 pandemic that occurred in early 2020 had a major impact on the tourism sector, including outbound tourism. The number of outbound trips in 2020 decreased by around 75 percent compared to 2019. This trend continued in 2021, when the number of outbound trips fell by 41 percent. However, the number of outbound trips increased significantly in 2022, reaching 3.5 million, an increase of more than 100 percent. This condition is supported by the

https://www.bps.go.id

reduced impact of the pandemic and travel activities are relatively back to normal.

Furthermore, observing the number of outbound trips per month, it was identified that under normal conditions, such as in 2019, the number of outbound trips would be high in January, June, and the end of the year. This may be due to school holidays and year-end holidays. In 2020, the number of outbound trips was very high at the beginning of the year compared to other months since the Covid-19 pandemic had not happened. However, this number declined further as Covid-19 began to have a widespread impact in March 2020. The decline in the number of outbound trips continued throughout 2021. In contrast, in 2022, in the first three months, the number of outbound trips was very low and increased rapidly starting in April 2022. This is due to conditions mobility began to return to normal after the pandemic.

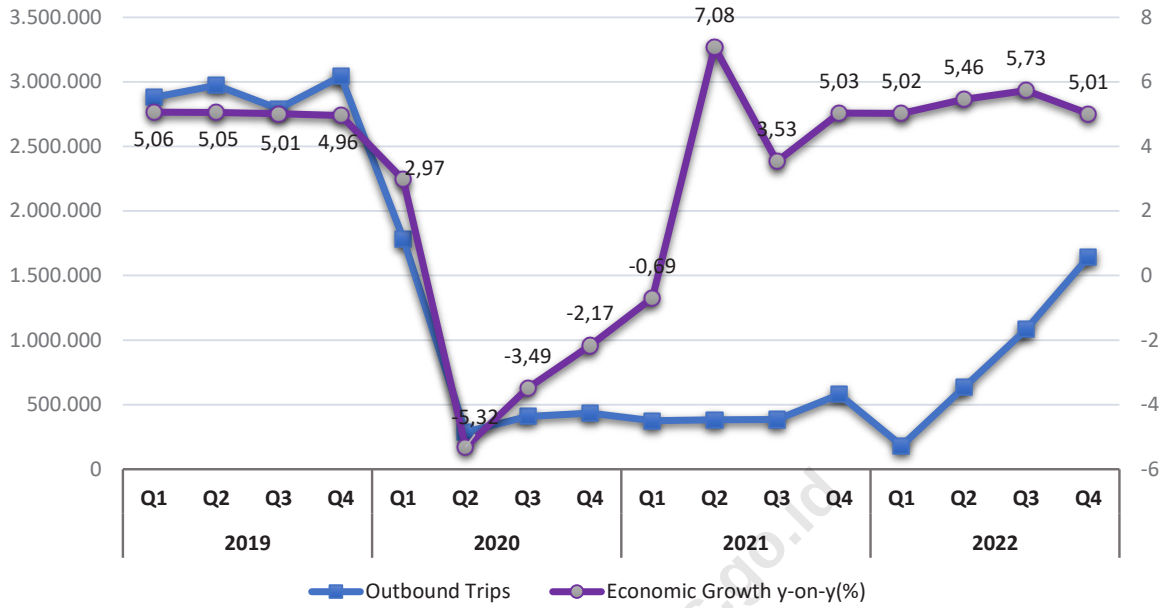

*"The rise in outbound tourism in Indonesia is relatively in line with the economic recovery in 2022."*

The Covid-19 pandemic that occurred in early 2020 and continues in 2021 had a broad impact, including a decline in Indonesia's economic growth. In 2022, Covid-19 was relatively under control as a result of using vaccines and boosters. Accompanied by various interventions to reduce the economic impact of the pandemic, the recovery in economic conditions began to be seen in 2022. The release of Gross Domestic Product (GDP) data by Statistics Indonesia (BPS) revealed that the economy grew by around 5 percent year on year in 2022. This growth is not much different from the condition before the pandemic in 2019. Therefore, it can be said that the economy has the momentum to return to normal after experiencing a slowdown in 2020 and 2021.

https://www.bps.go.id

The number of outbound trips is largely determined by regulations to limit population mobility during the pandemic. However, in Indonesia, economic conditions also have an influence on determining the number of outbound trips, although it is not consistent every year. In 2020, when economic growth slowed down, the number of outbound trips also decreased. This trend continued in 2021, when the number of outbound trips dropped sharply, but nonetheless, the economy grew positively compared to 2020. It seems that economic conditions have no impact on outbound trips. Still, if it is observed that even though the economy is growing positively, it has not returned to normal at the pre-pandemic level. Positive growth was more due to a comparison with economic conditions in 2020, which had experienced a slowdown. Furthermore, the trend of economic growth and the number of outbound trips are back in line in 2022, where both grow positively even though the number of outbound trips has not returned to normal as at pre-pandemic levels.

Figure 1.2. Number of Outbound Trips in 2019-2022 and Economic Growth Rate y on y

*"International trade does not necessarily determine the number of outbound trips."*

Many studies have focused on the impact of the number of inbound visitors on economic growth. The arrival of inbound visitors is a driving factor in the creation of business activities and employment in tourist destinations. Likewise, inbound visitors spending is a source of foreign exchange income for the destination countries. In fact, it has been proven that inbound visitors also have a long-term impact on economic development.

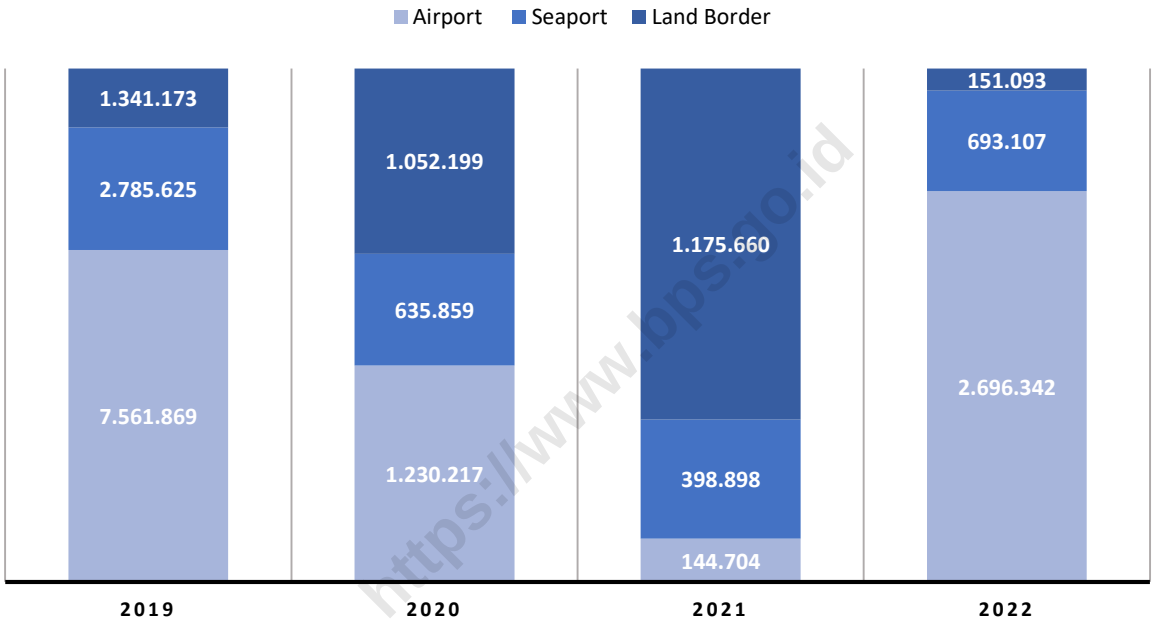

Although not much has been discussed about the economic impact of outbound tourism, analysis of empirical data from several countries shows that the trend in the number of outbound trips is also in line with international trade. It is alleged that the increase in international trade encourages an increase in demand for travel and ease of travel, as reduced costs that must be incurred. This will lead to an increase in the volume of outbound tourist trips.

The analysis is appropriate for the data conditions in 2022, where an increase in outbound trips goes hand in hand with an increase in the volume and value of Indonesia's international trade. In 2022, Indonesia's total export value increased by 26.07 percent compared to 2021. Likewise, the total import value also increased by 21.07 percent in the same period. A similar

https://www.bps.go.id

trend also occurred in 2019-2020, when the number of outbound trips and the total volume of Indonesia's international trade both decreased. On the other hand, in 2020-2021, when the number of outbound trips dropped dramatically, Indonesia's trade volume increased. The different direction of growth in this period indicates that outbound trips are not always directly proportional to international trade.

**Figure 1.3. Number of Outbound Trips by Arrival Gate, 2019-2022**

Source: - Ministry of Law and Human Rights (Directorate General of Immigration)
- Ministry of Tourism and Creative Economy, Mobile Positioning Data
- BPS-Statistics Indonesia, Mobile Positioning Data

## Infrastructure Carrying Capacity

Infrastructure is one of the most important factors for the tourism industry. The World Economic Forum (WEF) uses infrastructure as one pillar to calculate the Travel and Tourism Development Index (TTDI). The 2019 Travel and Tourism Competitiveness Index (TTCI) data (now changed to TTDI) shows that Indonesia's airport infrastructure has a good score, including in the range of 20 – 40 percent of the best score. Meanwhile, seaports and land transportation infrastructure scored lower.

Outbound trips by arrival gate also seem to indicate the carrying capacity of infrastructure for tourism trips. In 2019, almost 65 percent of outbound trips used airports. This condition is no different from 2022, when 77.5 percent of outbound trips were recorded at the airport arrival gates. However, the dominance of air transport is not only due to better infrastructure. The use of transportation facilities is also influenced by other factors, such as the purpose of the trip, time considerations, price, purchasing power, as well as accessibility of facilities.

https://www.bps.go.id

# Outbound Trip Characteristics

*illustration: storyset.com*

https://www.bps.go.id

The Indonesian people are known as a nation of explorers. The tribes living in the archipelago are accustomed to traveling outside the archipelago for various purposes, the main of which are economic and trade motivations. As an example, the Syailendra Empire was able to build sailing ships used by sailors to trade spices across the Indian Ocean to Madagascar, Africa, around the 8th century. Since the 14th century, the Bugis tribe has been able to build quite large sailing ships, namely the Pinisi ship. The Majapahit Empire had five trade routes covering the ASEAN region and southern India in the 15th century. This further confirms that traveling abroad has long been a part of the Indonesian nation.

Nowadays, traveling has many purposes. Traveling is not always done for economic reasons. One form of travel is tourism, which is part of a necessity or lifestyle. Traveling abroad provides a very valuable experience for tourists in interpreting life. Travel patterns are shaped by the need for experience and self-expression. Many factors can influence the motivation or purpose of a trip. This motivation can come from the traveler (internal) or from the influence of external factors.

## Destination Countries

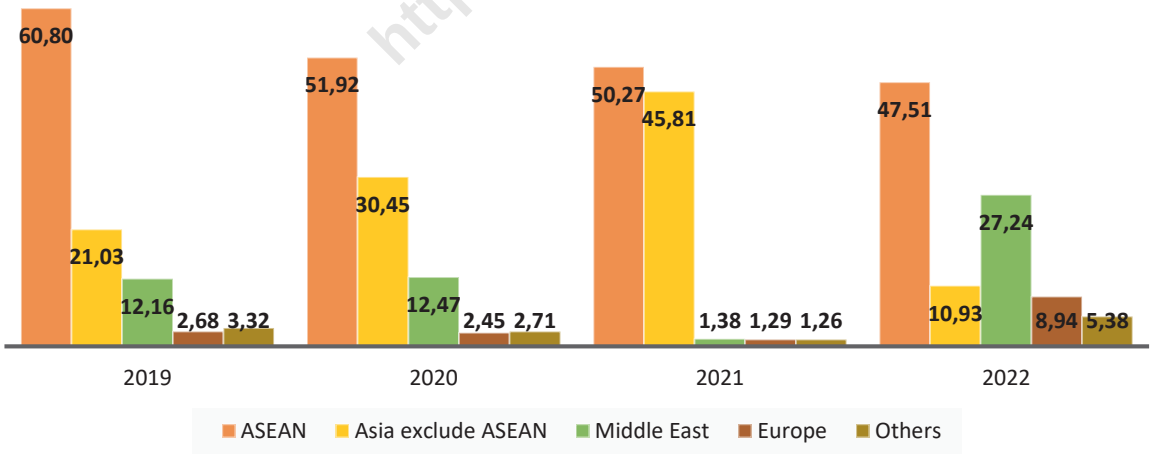

*"The distribution of outbound trips to the ASEAN region tends to decrease, although it remains the largest."*

The main destination countries for outbound tourism are still dominated by trips to neighboring countries, especially in the ASEAN region, although the percentage tends to decrease every year. The frequency of trips to the ASEAN region is high because the distance is relatively close, so transportation costs are cheaper. Outbound trips with the main destinations of countries in ASEAN reached 47.51 percent in 2022. Malaysia and Singapore are the largest main destinations for outbound trips in ASEAN, at 18.56 percent and 18.05 percent, respectively.

Malaysia and Singapore are countries that are quite good at sustainable tourism development. Both occupy the 38th and 9th positions, respectively, out of 117 countries in the Travel and Tourism Development Index (TTDI) 2021. The index measurement is based on a set of factors and policies that enable the sustainable development of a resilient travel and tourism sector. This, in turn, contributes to a country's development.

https://www.bps.go.id

**Figure 2.1. Distribution of Outbound Trips by Main Region Destinations (percent), 2019-2022**

Source: - Ministry of Law and Human Rights (Directorate General of Immigration)
- Ministry of Tourism and Creative Economy, Mobile Positioning Data
- BPS-Statistics Indonesia, Mobile Positioning Data

There is a change in the development of the distribution of outbound trips by main region destinations. The percentage of destination countries in ASEAN tends to decrease and is no longer dominant. In 2022, the number of outbound trips to ASEAN no longer reach half. What is interesting is the rise of the Middle East as the main region destination to the second position, replacing Asia (excluding ASEAN), which fell to the third position.

*"Proximity and supporting infrastructure are attracting outbound trips to Malaysia and Singapore."*

The high intensity of outbound trips to Malaysia and Singapore is influenced by pull factors, namely the close proximity and the availability of adequate transportation facilities. Close proximity means short travel time, convenience, and low cost. The availability of transportation facilities to the two countries allows for various modes of transportation, such as air, sea, and even land transportation specifically for Malaysia. Travel through the airports, such as Soekarno Hatta, Juanda, and Kualanamu Airports. Travel can also be taken through seaports, such as Batam, Tanjung Uban, Tanjung Balai Karimun, and Tanjung Pinang. Meanwhile, the most common land border gates passed by outbound visitors are Entikong and Aruk, where the entrance is directly adjacent to Malaysia

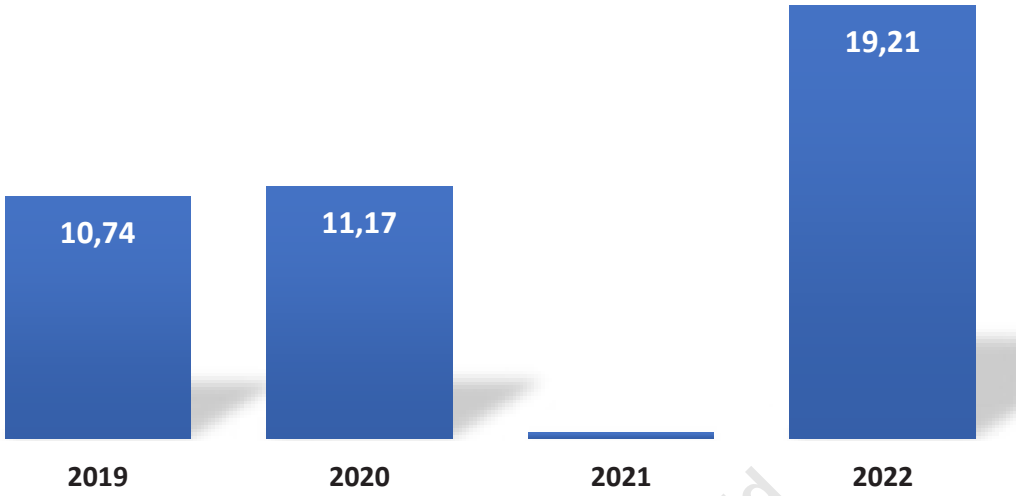

*"Saudi Arabia is the main destination country for outbound visitors for religious purposes (pilgrimage)."*

Saudi Arabia became the main destination for outbound trips in 2022, reaching 19.21 percent. The proportion of trips to this country has increased sharply compared to the period before the Covid-19 pandemic. The large trips to this country are primarily intended for religious activities (pilgrimage), namely the Hajj and Umrah pilgrimages. This is not surprising considering the number of Umrah pilgrims has increased many times since the government of Saudi Arabia opened access to the Umrah and Hajj pilgrimages, which had been closed for the last 2 years.

Indonesia's haj quota for 2022 reached 100,051 people. Meanwhile, the number of Umrah pilgrims in 2022 reached more than half a million people (Kemenag, 2023). The extraordinary economic potential of this activity has a direct positive impact on accommodation, transportation, and travel services. The absorption of labor both domestically and abroad will certainly increase to be able to serve the congregation. Other supporting sectors, such as industry and trade, have indirectly received a positive effect from the recovery of the Hajj and Umrah pilgrimages.

## Main Purposes of Outbound Trips

One aspect that needs to be considered in tourism development is the motivation or purpose of tourists. According to Mathieson, A., and Wall, G. (1982), a person's motivation to travel can be grouped into four categories: physical, cultural, personal, as well as prestige and status. Tourist motivation is an important factor in making decisions regarding the location of tourist destinations to be visited. In modern society, travel can be motivated by more than one aspect, which is very complex.

In International Recommendations for Tourism Statistics 2008, the main purpose of a trip is defined as the purpose in the absence of which the trip would not have taken place. Information about the main destinations of trips is useful for describing tourism expenditure patterns. In addition, it is also important to identify the key elements of tourism demand for planning, marketing, and promotional purposes.

Broadly speaking, the main purpose of travel can be classified into two groups, namely personal and business purposes. Included in personal goals, namely vacation/recreation, visiting friends or relatives, health, religious/pilgrimage, and shopping. While those included in business and professional objectives, namely attending Meetings, Incentives, Conventions, and Exhibitions (MICE), entrepreneurial activities, investors, attending job training/training courses, providing expertise in their profession (giving lectures, concert/performers, participating in scientific or academic research, etc.).

Figure 2.3. Distribution of Outbound Trips by Main Purpose of Trips (percent), 2022

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

https://www.bps.go.id

*"Most of the main purposes of outbound tourist trips are personal purposes."*

More than three-quarters (75.46 percent) of outbound main purposes are personal, while the rest are business purposes (Figure 2.3). The most frequent personal purpose is for vacation (50.88 percent), followed by religious/umrah (9.68 percent). Meanwhile, business purposes are dominated by MICE (12.04 percent). This data shows the increasing variety of motivations or main purposes of outbound visitors.

'Revenge travel' becomes the motivation for increased vacation activity. Revenge travel is the phenomenon of people traveling as revenge for being fed up with the travel restrictions imposed during the Covid-19 pandemic. The Covid-19 pandemic forced people to isolate themselves, limiting social activities and travel restrictions, so that when there was an easing, it triggered people's desire to go traveling. In addition to revenge travel, the reopening of international flights at several airports and the easing of entry access for foreign tourists in some countries added to the high number. Countries in the ASEAN region, such as Singapore and Malaysia, are generally the destination countries for vacation/recreation, and MICE purposes.

## Average Duration of Trips

*"The Average duration of outbound trips in 2022 is 11 nights."*

In terms of trip duration, the average outbound visitor travels abroad for around 11 nights. Generally, the duration of the trip is short for countries that are relatively close, such as countries in the ASEAN region. In contrast, in European and American countries, on average, outbound tourists spend 30-40 nights. Singapore is the country with the shortest trip duration, which is around 4 nights, while England is the country with the longest trip duration, which is around 62 nights. The average duration for personal purposes (around 10 nights) is slightly shorter than for business purposes (around 14 nights).

*"The use of tour packages is dominated by outbound visitors to the Middle East."*

Some characteristics of outbound tourism will be related to trip characteristics, one of which is the use of tour packages. Most outbound visitors do not use tour packages when traveling. Survey data reveals that only about 20 percent of outbound visitors use tour packages. But specifically for Middle Eastern destinations, the opposite applies. More than 80 percent of visitors to the Middle East use tour packages. This percentage is influenced by outbound visitors to Saudi Arabia, where almost 92 percent use tour packages. This can be understood considering that visitors to Saudi Arabia are there for worship purposes that are generally carried out collectively, such as recitation groups and families.

https://www.bps.go.id

# Outbound Socio-Economic Characteristics

*illustration: storyset.com*

https://www.bps.go.id

Visitors are the center of observation for tourism itself. Just like other tourism trips, outbound trips can also be classified based on socio-economic characteristics. Socio-economic characteristics can provide a different picture of the behavior of outbound trips. The International Recommendations for Tourism Statistics 2008 state that the socio-economic characteristics referred to refer to gender, age, status of economic activity, employment, income, and education.

## Gender of Outbound Visitors

The characteristics of outbound visitors can provide an overview of the main purpose of the trip. One of them is gender. In 2022, in general, outbound visitors will be dominated by men (around 61 percent).

The low percentage of female visitors is possible due to several reasons. First, the mobility

of men tends to be higher than that of women, who spend more time on domestic affairs. Second, even though the number of confirmed positive cases of Covid-19 has decreased, it cannot be denied that the Covid-19 pandemic is still a consideration for travel. This also influences the different behaviors of men and women. According to a study conducted by Gebhard, Regitz-Zagrosek, Neuhaser, Morgan, and Klein (2020), women tend to be more concerned about their own health than men. From this, it can be concluded that it is quite possible for women to avoid traveling long distances (Matalas, Panaretos, Tzoutzou, & Lazaridis, 2023).

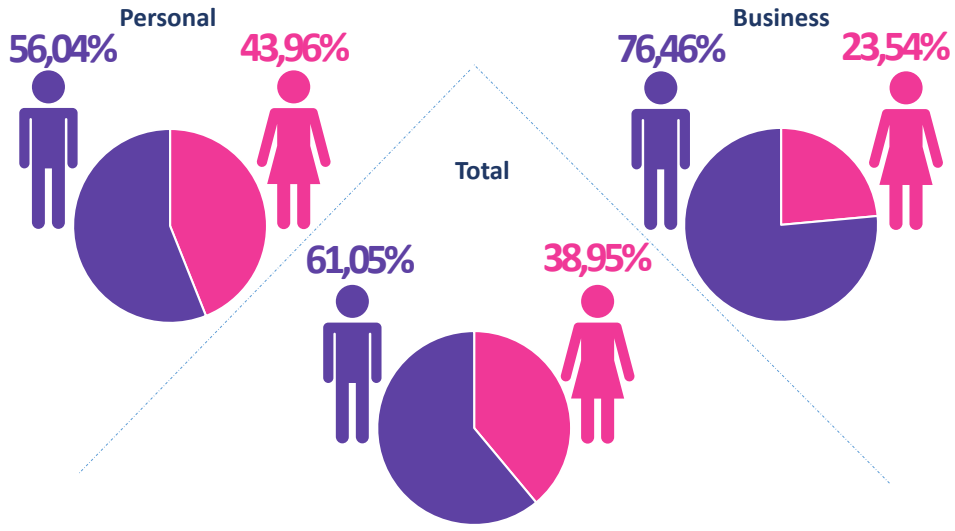

*"Outbound visitors are dominated by men."*

When the data is disaggregated according to the main purpose of the trip, it can be seen that the business purpose is mostly carried out by men. Of the total outbound trips for business purposes, more than 75 percent are men. Meanwhile, for personal purposes, the number of males and females is relatively balanced, although the male number is still larger.

The dominance of male occurs in all countries or main destination regions. Even in certain countries, such as in Vietnam and Australia, the proportion of male outbound visitors exceeds two-thirds of all trips there Only Turkey's destination countries are almost evenly balanced between male and female outbound visitors.

https://www.bps.go.id

**Figure 3.1. Distribution of Outbound Trips by Gender and Main Purpose of Trips (percent), 2022**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

## Age Groups and Main Occupations of Outbound Visitors

*"The majority of outbound visitors are aged 25-45."*

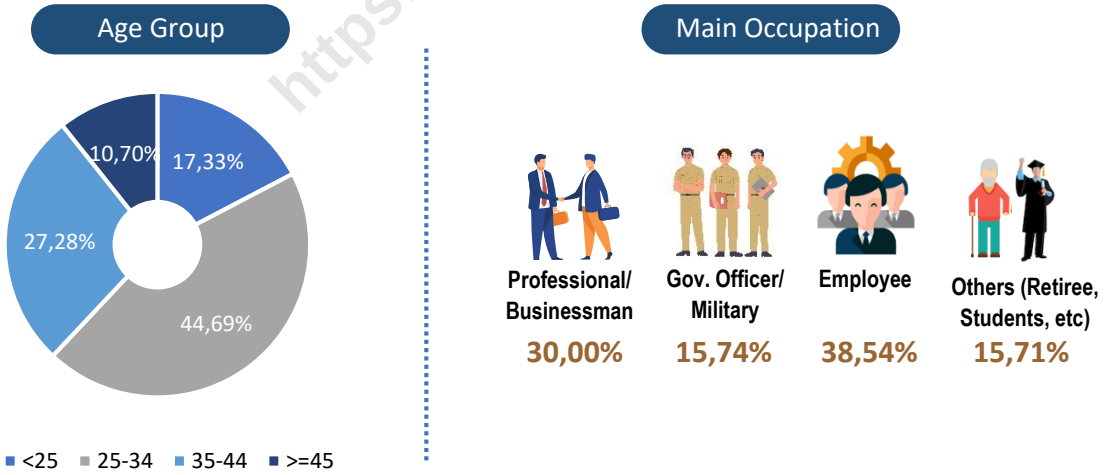

Apart from gender, age also has a significant influence on traveling abroad. In 2022, the majority of outbound trips will be made by visitors aged 25–44 (around 72 percent). It is not surprising that this is a productive age that tends to have high mobility.

On the other hand, the smallest percentage of outbound visitors are those aged 45 and over. In general, the older a person is, the lower their immunity. What's more, older residents have a higher level of vulnerability when dealing with the COVID-19 virus, which raises concerns about traveling long distances. This and the situation during the pandemic forced the government to set a maximum age limit of 65 years for prospective pilgrims to perform the pilgrimage in 2022.

In general, roughly 39% of outbound visitors work as employees. The bulk of outbound visitors to some destination nations, including Australia, England, or Germany, are people who are employed as professionals or business owners. These two main work groups typically dominate business trips.

https://www.bps.go.id

**Figure 3.2. Distribution of Outbound Trips by Age Group and Main Occupation (percent), 2022**

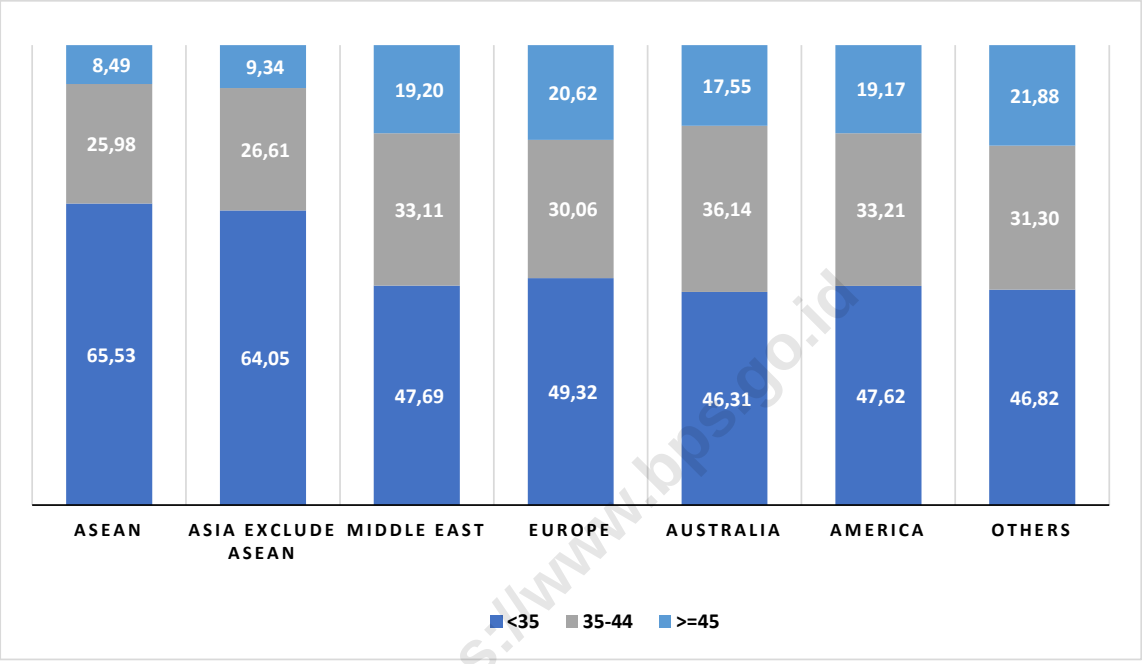

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

*"Outbound visitors to Asian countries tend to be younger."*

From the age characteristics it can also be seen that there are differences between outbound visitors to Asian destinations (including ASEAN) compared to destinations in other countries. The age of visitors to Asian countries is relatively younger. Less than 10 percent of

tourists visiting Malaysia, Singapore or Asian countries are over 45 years old. The percentage of this group in destination countries in the Middle East, America, Australia and European countries reached approximately 20 percent.

**Figure 3.3. Distribution of Outbound Trips by Region of Destination Country and Age Group (percent), 2022**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

This age characteristic may also be related to the purpose of the trip. Outbound visitors to America, Europe and Australia have a relatively larger proportion for business purposes. If the age of the visitors for business purposes is relatively older, it can be understood because the age characteristics will be related to the job characteristics. The older the greater the chance to have a high position in the job.

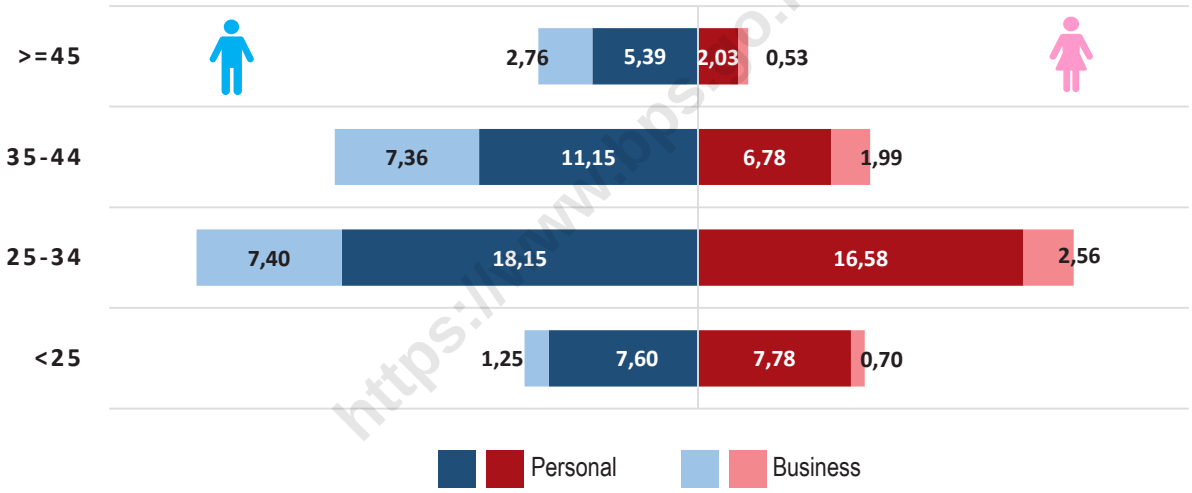

The age structure of outbound visitors to the Middle East, the majority of whom are there for religious reasons, is also older. This information makes sense given that Hajj and Umrah performers are typically very senior. Visitors to ASEAN and Asian countries are relatively younger, with more than 60 percent aged less than 35 years. This may be due to the dominance of personal purposes in ASEAN and Asian countries. According to the age structure, outbound visitors who have personal purposes tend to be younger than those who travel for business.

https://www.bps.go.id

*"For all age categories, the majority of outbound visitors have personal purposes."*

The pattern of trip distribution by age group and the main purpose of the trip look identical for male and female outbound visitors. Of all outbound trips, the proportion aged 25–34 years is the largest percentage, while those aged over 45 years are the smallest percentage. In terms of main purpose, personal purposes seem to dominate across all genders and age groups. In more detail, the pattern of distribution by age group is also the same for personal and business purposes. From this, it can be seen that the largest proportion of trips are made by outbound visitors aged 25–34 and have personal purposes.

**Figure 3.4. Distribution of Outbound Trips by Gender, Age Group and Main Purpose of Trips (percent), 2022**

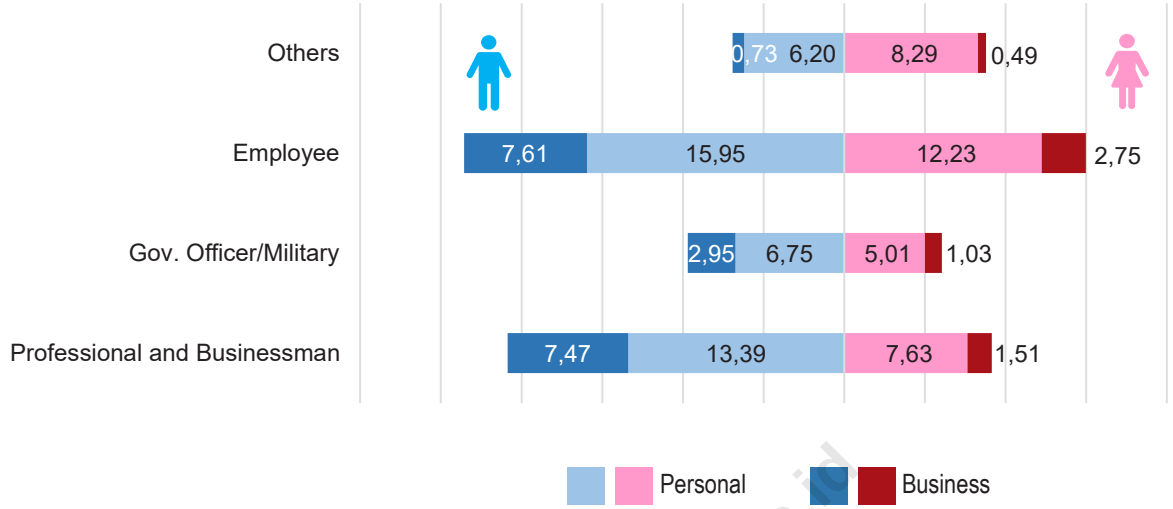

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

*"Travel for business purposes is dominated by male and work as professionals, businessmen or employees."*

In terms of main occupation, most trips are made by outbound visitors who work as employees, followed by those who work as professionals and businessmen, both male and female. Personal purposes also still dominate in all types of occupations. It can be concluded that most outbound trips are carried out by men who work as employees, and the purpose of the trip is for personal purposes.

Figure 3.5. Distribution Outbound Trips by Gender, Main Occupation and Main Purpose of Trips, 2022

https://www.bps.go.id

# Outbound Expenditures Characteristics

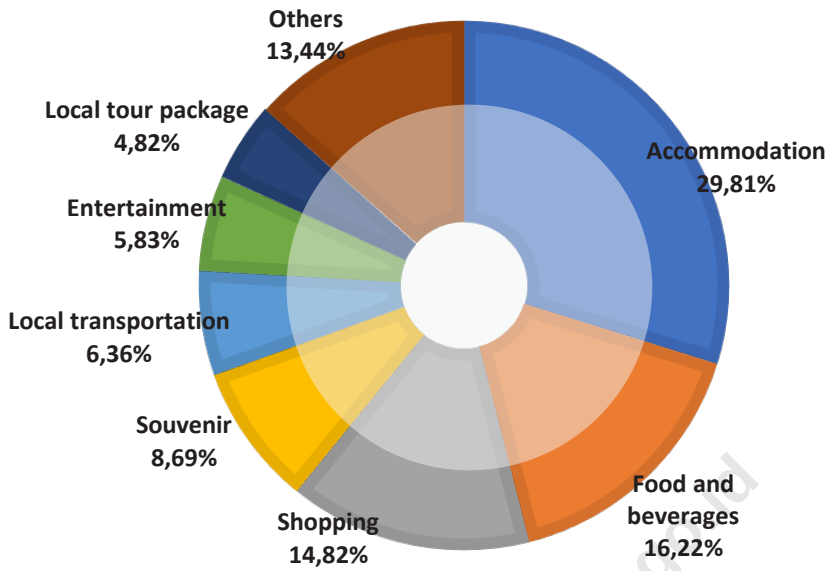

*illustration: storyset.com*

Travel abroad has received little attention in Indonesia. This is because more and more foreign exchange goes out if more and more Indonesians travel abroad. But on the other hand, understanding the spending behavior of outbound trips is very important to assist in developing tourism strategies in the country and also enable the government to make more informed decisions.

*"Expenditure on accommodation ranks first of the total expenditure."*

The results of the digital survey found that the average outbound expenditure in 2022 was US$2,646.53. About 60 percent of total expenditure is used for accommodation (29.81 percent), food and beverages (16.22 percent), and shopping for personal needs (14.82 percent). The remaining 40 percent of expenditure is used for various types of expenses such as health needs, entertainment, local transportation, and others.

Figure 4.1. Distribution of Outbound Expenditure by Type of Expenditure (percent), 2022

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

https://www.bps.go.id

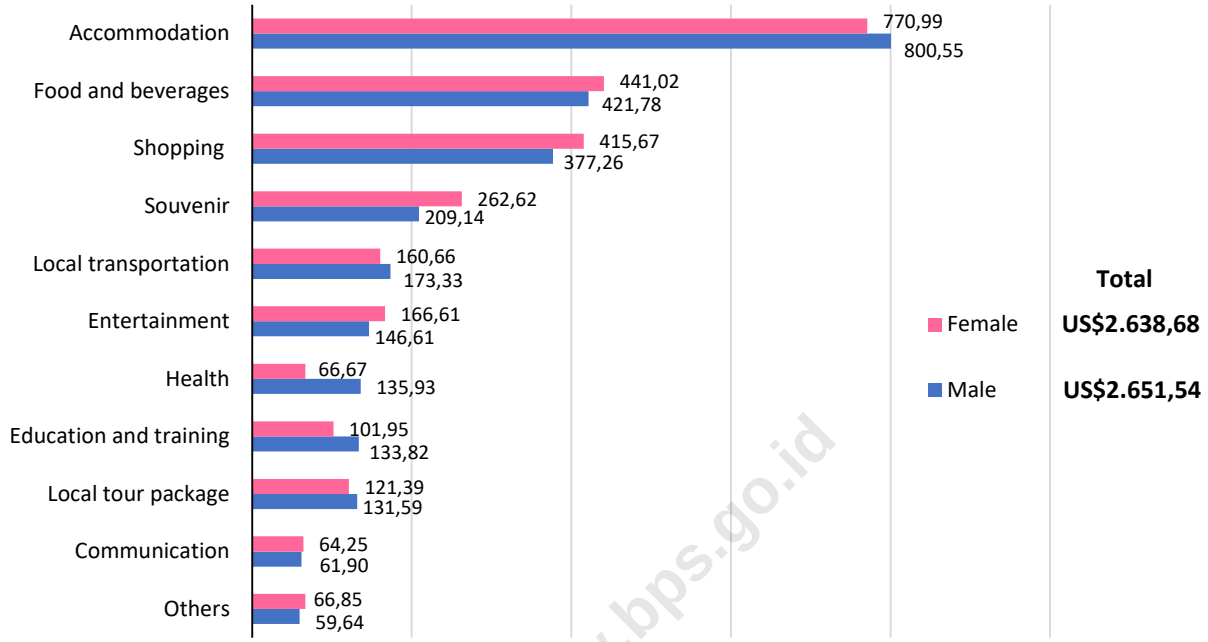

## Expenditure by Socio-Economic Characteristics

*"In general, male and female outbound visitors do not have much different average expenditures."*

Based on the socio-economic characteristics, it can be seen that gender does not determine the total amount of expenditure. Digital survey data reveals that male outbound visitor spending is slightly higher than female, although not much different. This difference is possible because men and women have different types of expenses due to different preferences.

In terms of type of expenditure, females tend to spend more on food and beverages, shopping for personal needs, souvenirs, and entertainment. This is in accordance with research conducted by Matalas, Panaretos, Tzoutzou, and Lazaridis (2023), which concluded that females are more motivated to taste local food and also eat at restaurants that are relatively higher quality so that spending on food is higher. Apart from that, female tourists also want to see more places and spend more to buy different things and eat different foods during their visit.

Figure 4.2. Average Expenditure by Type of Expenditure and Gender (USD), 2022

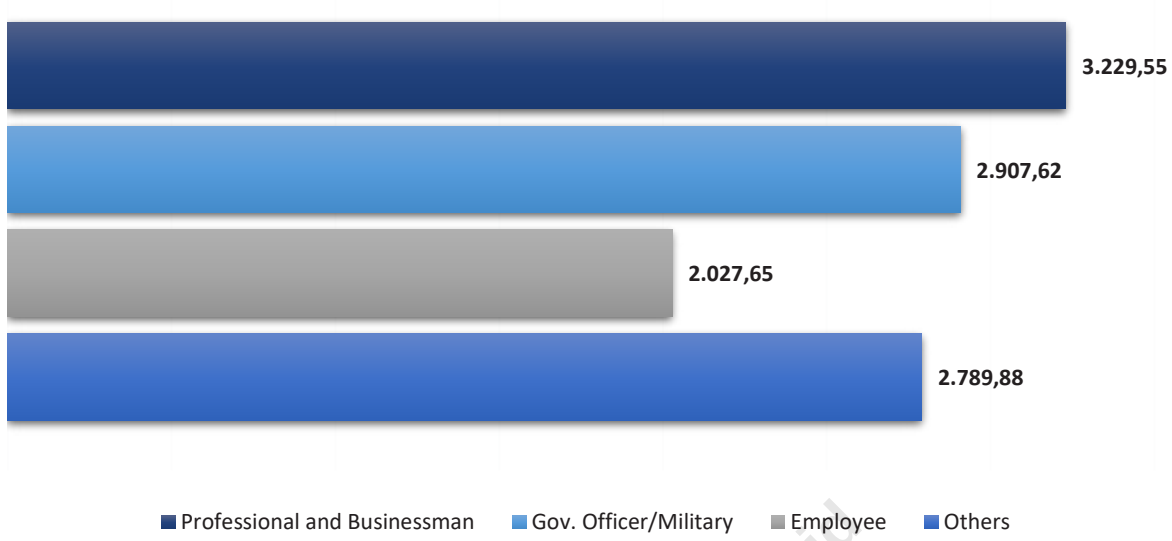

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

https://www.bps.go.id

*"Professionals, employers, government employees, and the military tend to have larger total expenditures."*

On the other hand, employment status is quite influential in determining the total expenditure. Digital survey data shows that professionals, businessmen, government employees, and the military tend to have larger total expenditures. This condition can be caused by the tendency of government and military employees to travel for business purposes with large levels of expenditure. Meanwhile, the group of entrepreneurs and professionals can be explained by their high purchasing power, so that both for personal and business purposes, their travel expenses are relatively high.

Figure 4.3. Average Expenditure by Main Occupation (USD), 2022

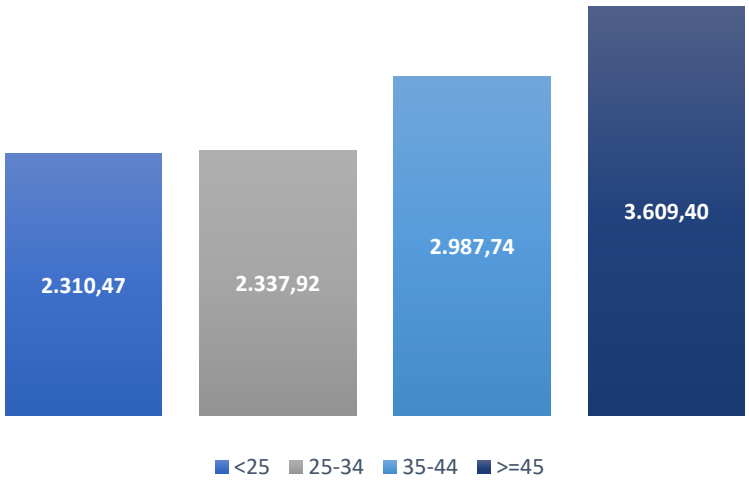

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

*"The older the outbound tourist travel agent, the higher the total expenditure."*

Likewise, the age of visitors seems to affect total expenditure. The older the age of outbound visitors, the higher the expenditure also tends to be. Data consistently shows that people aged > 45 tend to have higher expenditures than other age groups for all employment statuses except government and military employees. This condition illustrates that the purchasing power of this group is relatively good or economically stable.

https://www.bps.go.id

Figure 4.4. Average Expenditure by Age Group (USD), 2022

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

## Expenditure by Trip Characteristics

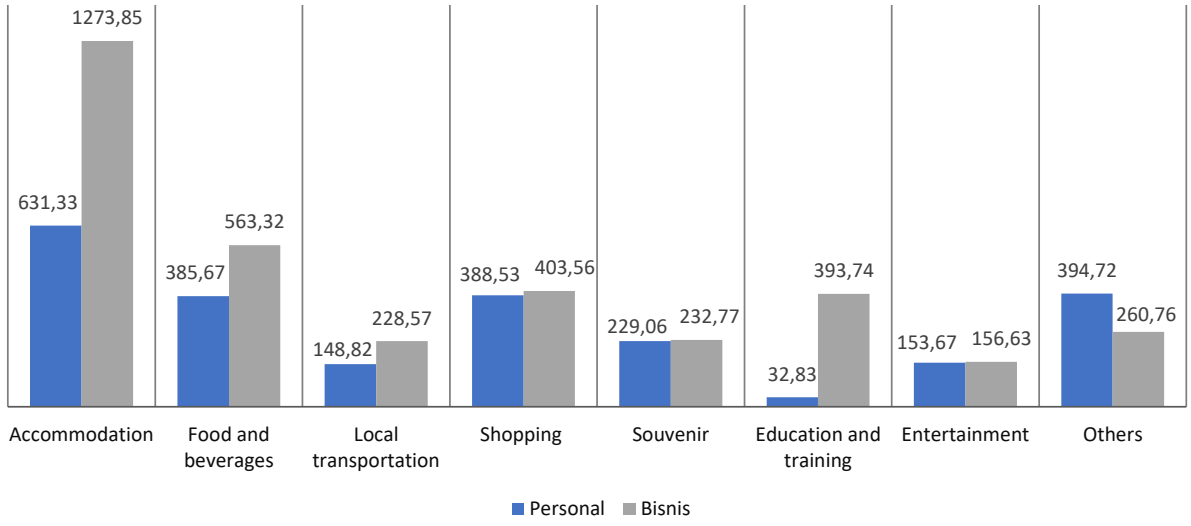

Furthermore, the average expenditure also varies by destination country. Several reasons can explain the large expenditure in a country. One characteristic that is closely related is the duration of outbound trips. This is because expenses for accommodation, food, and beverages are directly proportional to the length of stay. So, the longer the stay in the destination country, the greater the total expenses will be.

In 2022, the UK became the destination country with the largest average outbound expenditure, which is around US$19,353.18. This is quite reasonable considering the average length of stay in England is 62 nights compared to the average length of stay in total, which is only 11 nights. On the other hand, Singapore and Malaysia are low-spending destinations, amounting to US$1,008.78 and US$1,418.78, respectively. No wonder, because the average length of stay in this country is only about 4 days and 9 days, respectively.

In terms of main purposes, expenses for business purposes (US$ 3,513.20) were greater than expenses for personal purposes (US$ 2,364.62). Travel for business purposes is often associated with staying in expensive and even luxurious star-rated accommodations, eating at well-known restaurants, or holding meeting (MICE) in famous buildings. All of this leads to service, comfort, and facilities that support the smooth running of the business trip. For personal purposes, some people don't do this and even tend to save money. Stay in affordable hotels such as budget hotels, bring food from Indonesia, use public transportation, and so on so that expenses are not as big as business trips.

https://www.bps.go.id

https://www.bps.go.id

# Impact of Covid-19 on Outbound Tourism

*illustration: storyset.com*

https://www.bps.go.id

The national and global tourism sectors began to recover in 2022 as the Covid-19 case slowed down and travel restrictions were relaxed. The number of international visitors arrivals worldwide doubled compared to the previous year, reaching 917 million (Statista Research Department, 2023). Nonetheless, the figure was still 37 percent lower than in 2019.

The same trend occurred in the number of outbound trips. In 2022, the number of outbound trips reached 3.5 million, grew by more than 100 percent compared to the previous period. However, this figure was still 70 percent lower than before the Covid-19 pandemic in 2019. The average expenditure also increased significantly compared to before and at the beginning of the pandemic. The average expenditure per trip in 2022 was US$2,646.53, slightly higher than the previous year's US$2,437. Meanwhile, the average expenditure per trip in 2019 and 2020 was US$927.69 and US$938.14, respectively.

To identify the impact of Covid-19 on outbound statistics, the data analysis is divided into three groups. The year 2019 represents the condition before Covid-19, while the years 2020–2021 represent the condition during Covid-19. The year 2022, when improvements in conditions occur, is categorized as the Covid-19 recovery period.

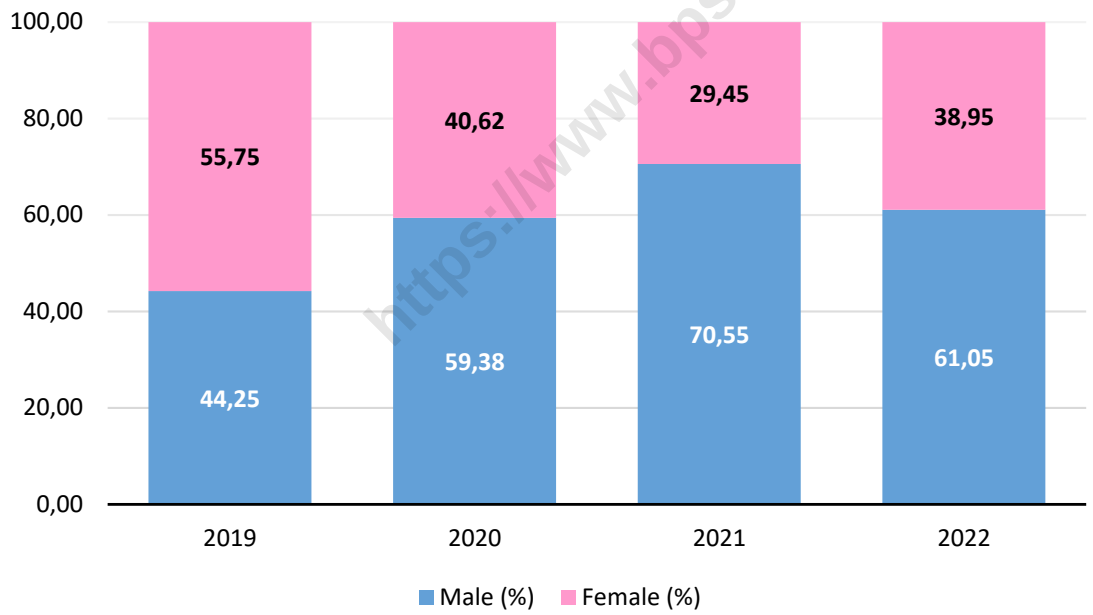

## Outbound Characteristics Before, During, and Recovery Period Covid-19 Pandemic

*"Outbound trips were dominated by male during the pandemic, which was the opposite compared to before the pandemic."*

In 2019, under normal conditions before the Covid-19 pandemic, the number of outbound trips made by Indonesian residents reached 11.69 million trips. The majority were female, with a percentage of 55.75 percent. The opposite happened during the outbreak of the Covid-19 case. Outbound trips were increasingly dominated by males in 2020, with the proportion reaching 59.38 percent. In 2021, the proportion of males reached 77.27 percent. However, the data in 2021 for a profile figure and does not represent the population. The percentage of males in 2022 increased again compared to 2020, reaching 61.05 percent.

https://www.bps.go.id

**Figure 5.1. Distribution of Outbound Trips by Gender (percent), 2019-2022**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

*"The proportion of trips to European and American regions increased significantly."*

What is interesting after the Covid-19 pandemic is the increasing proportion of outbound trips to the European and American regions. In 2022, the proportion of outbound trips in both regions increased more than three times compared to before the pandemic. Each reached 8.94

percent and 3.35 percent, respectively. In contrast, the proportion of trips to the ASEAN region tends to decrease every year, even though it is still the main destination for most trips.

By destination country, Saudi Arabia was the main destination in 2022, which reached 19.21 percent. This increases the proportion of the Middle East region from 12.16 percent in 2019 to 27.24 percent in 2022. Malaysia was the second largest main destination, even though before the pandemic it was the majority destination of outbound trips, which reached 38.87 percent. And the next one was Singapore, with the proportion reaching 18.05 percent.

China became the epicenter of the Covid-19 outbreak. The strict isolation carried out by the Chinese government made the country even more isolated, so trips to the country declined. The distribution of outbound trips to China slumped to 0.73 percent in 2022, much lower than before the pandemic, which reached 4.09 percent.

*"The average duration of trips became longer during the pandemic and recovery period ."*

The duration of outbound trips was much longer than before the pandemic. The average duration of trips reached 7.79 days and 8.43 days in 2020 and 2021, respectively. The increasing trend in the average duration of trips continued in 2022, reaching 10.75 days. Meanwhile, before the pandemic in 2019, the average duration of trips was only 4.58 days. Outbound region destinations with the longest average duration of trips were the Americas (39.55 days) and Europe (33.47 days).

https://www.bps.go.id

*"Provinces on the Java island continued to dominate the origins of outbound trips."*

More than half of outbound visitors in 2022 were domiciled in Java. The distribution increased from 40.16 percent in 2019 to 59.41 percent in 2022. The existence of large-scale travel restrictions from 2020 to 2021 caused outbound visitors domiciled in Java to decrease in proportion, reaching only 7.69 percent in 2021. At that time, outbound trips were dominated by visitors from East Nusa Tenggara and West Kalimantan, which have direct land borders with foreign territories.

*"The majority of the main purpose of outbound trips is vacation/recreation, while the main occupation is as an employee."*

Vacation/recreation became the majority of outbound trips' main purpose in 2022, reaching 50.88 percent. The proportion increased compared to before the pandemic (in 2019), which was only 45.24 percent. Meanwhile, the main occupation of most outbound visitors were employees , which reached 38.54 percent in 2022, higher than before the pandemic (in 2019)

of 31.59 percent. The characteristics of outbound trips based on the main purpose and main occupation were consistent both before and during the Covid-19 pandemic.

## Outbound Expenditure Characteristics Before, During, and Recovery Period Covid-19 Pandemic

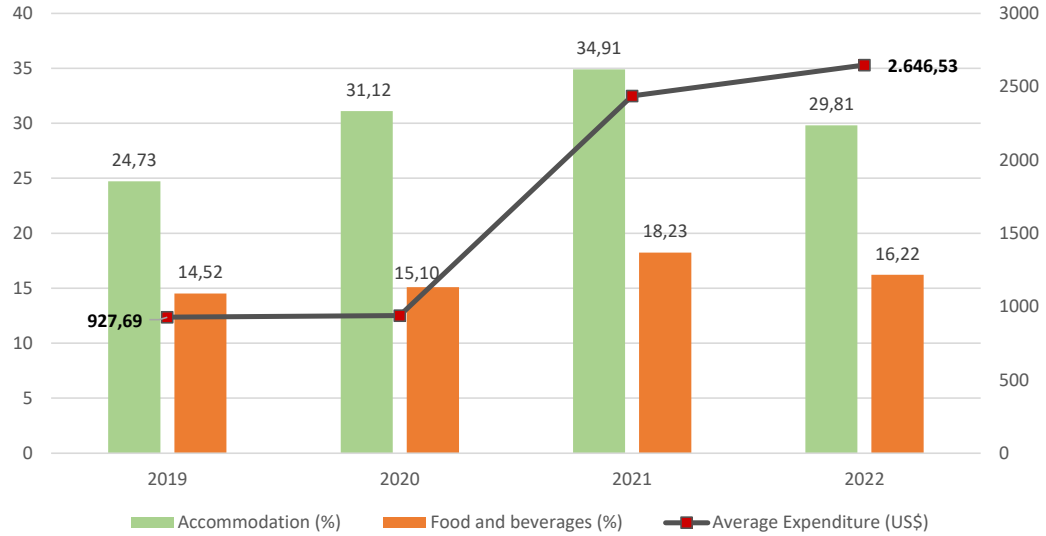

*"In general, during a pandemic and recovery, the average expenditure per trip is higher than during normal conditions."*

The average expenditure on outbound trips experienced significant changes before the pandemic, during the pandemic, and the recovery period. In the time before the pandemic (2019) the average expenditure per trip was around US$927.69, which was lower than in 2020 (US$938.14 US dollars). Meanwhile, in 2021 when the pandemic reached its peak, the average expenditure per trip increased rapidly to around US$2,437. This increase was also accompanied by an increase in the average duration of trips in most of the destination countries. This condition is quite reasonable because, at that time, there was an obligation to quarantine first upon arrival in the destination country and before leaving the destination country.

Furthermore, during the recovery period (2022), the average expenditure per trip increased slightly compared to the previous year. When compared to the average expenditure per trip in 2022 and 2021, there is not much difference. So it can be summarized that outbound expenditure increased during the pandemic.

https://www.bps.go.id

**Figure 5.2. Average Expenditure per Trip and Proportion of Expenditure on Accommodation, Food and Beverages, 2019-2022**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

*"The structure of outbound expenditure does not differ much between normal times and pandemic times."*

Accommodation is the major expense on outbound trips. This has consistently been the largest expenditure during 2019-2022. Likewise, food and beverage needs, although not in the same position, are always in the top five main needs on outbound trips. In general, expenditure on accommodation as well as food and beverages contributes to 40-50 percent of total outbound expenditure. Furthermore, personal needs and souvenirs also often come out as five main expenditure components during 2019-2022.

Of particular interest are expenditure on health and local transportation. Prior to the pandemic, travelling abroad for health purposes such as treatment was quite common. However, when the pandemic occured, the medical world focuses on handling Covid-19 and mobility restrictions stimulated reduced travel for medical purposes or other health actions. It resulted in the expenditure for health fell out of the five main expenditure components during a pandemic, except in 2021. In contrast, the proportion of local transportation expenditure became quite large and was included in the top five expenditures during the pandemic and recovery period. This condition may be due to the use of transportation mode that guarantee more privacy to avoid transmission of the virus.

https://www.bps.go.id

**Table 5.1. Top Five Main Expenditure Components of Outbound Trips, 2019-2022**

| No | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|
| 1 | Accommodation | Accommodation | Accommodation | Accommodation |
| 2 | Shopping for Personal Needs | Food and Beverages | Food and Beverages | Food and Beverages |
| 3 | Food and Beverages | Communication | Shopping for Personal Needs | Shopping for Personal Needs |
| 4 | Souvenirs | Souvenirs | Local Transportation | Souvenirs |
| 5 | Health | Local Transportation | Health | Local Transportation |

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

## Origin Areas of Outbound Trips Before, During, and Recovery Period Covid-19 Pandemic

Based on the theory of the Gravity model in the migration process, population movement is said to be influenced by distance and population size. The population size will be directly proportional to the migration actors, while the distance will be inversely proportional. So the greater the distance between the origin and destination areas, the smaller the volume of

migration will be. Conversely, the larger the population of the area of origin, the greater the volume of migration that will be stimulated. Even though tourism trips cannot be equated with permanent migration, the Gravity model theory can be used to explain the phenomenon of outbound trips.

**Figure 5.3. Distribution of Outbound Trips by Origin Areas, 2019**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

https://www.bps.go.id

Data on the origin areas of outbound visitors showed that certain provinces contribute significantly to the total number of outbound trips due to several factors. First, the size of the population or the total population of the province. The 2019 data showed that Jawa Barat, Jawa Timur, DKI Jakarta, and Sumatera Utara were provinces that contributed significantly to the total number of outbound trips. Second, the aspect of proximity to the destination. This can be identified based on the location of the provinces that have direct borders with another country. Data from 2019 showed that Kepulauan Riau, Nusa Tenggara Timur, Kalimantan Barat, and Kalimantan Utara were the origin areas for outbound trips which were quite large. Third, the availability of facilities such as airports and direct flights abroad is also a driving force behind the large contribution to the total number of outbound trips. This was illustrated by the large contribution of DKI, Sumatera Utara, Riau, and Banten to the total number of outbound trips.

**Figure 5.4. Distribution of Outbound Trips by Origin Areas, 2021**

Source: BPS-Statistics Indonesia, Outbound Tourism Digital Survey 2022

https://www.bps.go.id

Furthermore, there is no doubt that the pandemic has brought profound changes to the tourism industry. Travel restrictions and various obstacles that occurred during the pandemic not only changed the number of outbound trips but also determined the characteristics of outbound trips, one of which was the origin areas of the visitors. In general, it can be concluded that during a pandemic, distance has a major influence on determining the number of trips. This is due to flight restrictions, so visitors will depend on land or sea transportation modes. According to data for 2021, when the pandemic was at its peak, most outbound trips came from Kalimantan Barat, Kalimantan Utara, Nusa Tenggara Timur, and Kepulauan Riau.

# Technical Notes

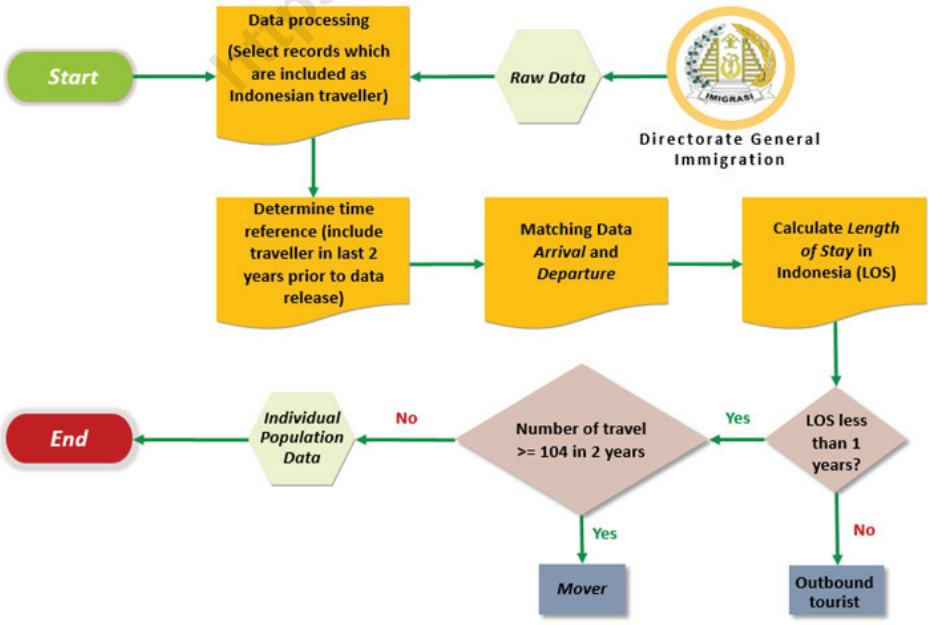

**Data sources**

The 2022 Outbound Statistics publication contains information on the number of trips abroad (outbound trips), destination countries, duration of trips, main purpose of trips, and average expenditure. This information is obtained based on three data sources, namely administrative data from the Directorate General of Immigration of the Ministry of Law and Human Rights (DG Immigration Kemenkumham), Mobile Positioning Data (MPD), and outbound digital survey.

## ■ Administrative Data from the Directorate General of Immigration

Data from the Directorate General of Immigration of the Ministry of Law and Human Rights is the main source of data on the number of outbound trips. This data is in the form of monthly reports on the crossing of Indonesian citizens (WNI) at international airport entrances, ports, cross-border posts in Indonesia. The concept of calculating the number of outbound trips can be seen in the following chart:

https://www.bps.go.id

The data generated from the processing includes the number of outbound trips by month and arrival gates. One of the shortcomings of this data is that there is no information about the destination country on the trips, so the data cannot be presented up to the destination country level. This information is needed to know the partner countries for imported services in Indonesia

.

### ■ Mobile Positioning Data

BPS also uses MPD to complete the number of outbound trips in border areas where there are no immigration checks. This data is obtained through the Ministry of Tourism and Creative Economy. However, since 2022, the MPD in border areas from the Ministry of Tourism and Creative Economy has been discontinued because BPS has already produced MPD.

The use of MPD is one of the solutions to obtain data on the destination country of outbound trips because the movement of the visitors' cellular phones can be detected in the destination country. To maintain the confidentiality of personal data, the cellular operator's customer number is encrypted into a unique combination of numbers and characters with a one-way function. This mechanism ensures that the analysis of customer movements does not violate privacy rules.

https://www.bps.go.id

The steps taken to obtain outbound data from MPD follow the following flow:

1. Screening of subscribers who have a home in Indonesia to ensure that the subscribers are Indonesian residents. This home determination uses the AMDA algorithm based on observed data for at least the last 12 months.
2. Next, data cleaning is carried out, namely removing domestic data (movements in Indonesia) between a series of outbound trips, removing other country data between one country trip, removing trips in a country for less than 6 hours, and removing trips that do not start in Indonesia and end in Indonesia.
3. Determination of departure and arrival points at the district level and removal of domestic data other than at departure and arrival points.
4. Unification of consecutive country trips and redetermination of departure and arrival points in each trip.
5. Filtering of trips that are less than 365 days.
6. After obtaining data on Indonesian citizens' trips abroad as a whole, combining data on home (place of residence), the latest point before going abroad (arrival), and the earliest point in Indonesia after leaving abroad (departure).
7. Determination of main destination countries, secondary destination countries, and transit countries.

From the MPD, data on the number of outbound trips by destination country, origin (home) areas, city/district of departure, city/district of arrival, and duration of trips are obtained, while the purpose of the trip as well as expenditures before, during, and after the trip and other profiles are obtained through digital surveys.

### ■ Digital survey

The Outbound Digital Survey is a digital survey of a sample of subscribers identified as outbound visitors (Indonesian residents who have traveled abroad). The identification of outbound visitors was carried out based on the MPD profiling results by following the steps above.

The digital survey was conducted using the BPS digital survey platform. The survey was asked to respondents who traveled abroad during 2022, with a sample size of 7,517 respondents. SMS blasts containing survey links were sent to selected respondents while taking into account the proportion of destination countries. Data collected in the digital survey included:

- Socio-economic characteristics, i.e., data on the demographic characteristics and economic status of Indonesians who travel abroad (age, gender, and main occupation).
- Trip characteristics are data on the travel information of Indonesian residents who travel abroad, from departure to return to their original place of residence. The variables collected include the main purpose of going abroad, destination country, and length of trip.
- Expenditure patterns, namely all expenditures of Indonesian residents who travel abroad, starting from travel-related preparations, while abroad, to returning to their original place of residence.

https://www.bps.go.id

https://www.bps.go.id

# Appendices

Table : 1 Number of Outbound Trips by Arrival Gates and Month, 2022

| Arrival Gates | Jan | Feb | Mar | Apr | May |
|---|---|---|---|---|---|
| (1) | (2) | (3) | (4) | (5) | (6) |
| **A. Air Transport** | **34.847** | **38.985** | **87.969** | **113.502** | **214.161** |
